Protect Your Overhead Doors

Have you had an overhead door damaged by a forklift with the mast too high?
Had the sides of doors damaged by forklift traffic?
Here's a solution: Build a goalpost at the entrance to your doorways. Paint them yellow so that mobile equipment operators can see them. This will help to protect your doorways, and keep people safe by preventing loads from being knocked off forks.

Another option is to hang clearance bars. These are similar to ones you see at Home Depot, or driving into parking garages. These are inexpensive ways to protect your buildings and keep your doorways safer.
