STATEMENT OF THE INSTITUTE OF SCRAP RECYCLING INDUSTRIES

The Institute of Scrap Recycling Industries, Inc. (ISRI) is pleased to submit these comments regarding the Standardization Administration of China’s 15 November 2017 Notifications to the WTO of proposed Environmental Protection Control Standards for Imported Solid Waste Used as Raw Materials to be adopted on 31 December 2017, with an entry into force date of 1 March 2018.¹

The proposed standards are an important part of China’s multi-prong strategy to enhance environmental protection and to develop a Circular Economy for China through a stronger domestic recycling infrastructure and a ban on imports of “foreign garbage” into the country. China is facing a serious environmental crisis, and the Chinese Government has made cleaning up the country’s environment and creating a “Beautiful China” by 2050 a major priority, and one that ISRI fully supports.

While we are supportive of China’s strategy, additional clarity and certain modifications to the standards are required to ensure they can be effectively implemented by Chinese authorities and complied with by the recycling industry. The following is a summary of the major issues raised within ISRI’s Statement:

1. The definition of what is a carried waste needs to be clarified so as to provide the recycling industry the information it needs to ensure compliance. Obtaining written clarification is necessary to prevent the inadvertent capture as carried waste of specification-grade scrap materials needed as raw materials to supply Chinese manufacturing, as well as to ensure consistent compliance globally and consistent enforcement at all Ports of Entry in China.

2. The specific thresholds of allowable “carried waste” needs to be adjusted to bring them in line with global standards that have been set according to manufacturing requirements.

3. A delay in implementation is needed to ensure full compliance. ISRI is committed to communicating the new standards set by the Chinese Government to its membership along with needed guidance. However, time is needed to do this and also to work cooperatively with AQSIQ and CCIC to ensure that inspectors are properly trained so as to provide consistent enforcement.

The issues presented herein are important to ISRI because, as the Voice of the Recycling Industry™, ISRI promotes safe, economically sustainable and environmentally responsible recycling on behalf of more than 1,300 member companies located in the United States, China and around the world that process, broker, and industrially consume scrap commodities.² The need for market-based movement of specification-grade scrap across borders means trade is a critical pillar to the recycling industry’s success, as well as to the success of industries around the world — including in China — that rely on these materials as critical inputs for manufacturing consumer and industrial goods. And as the largest supplier of scrap in the world, the U.S.-based scrap recycling industry is truly the first link in this global manufacturing supply chain.

² ISRI member companies operate at over 4,000 facilities located primarily throughout the United States, but also in 34 other countries around the world, including China.
Furthermore, ISRI provides a wide range of resources and services to help our members – wherever they are located in the world – operate to the highest operational standards. From environmental stewardship and compliance to safety to market research, ISRI (and its predecessor organizations) has been the foundation of the industry’s sustainable growth and development for more than eighty years. And through our partnerships worldwide, we have supported such sustainable growth in many countries around the world. The recycling and use of scrap commodities is a critical element of the creation of an “Ecological Civilization” for which China is looking to be a global leader.

More than 15 years ago, the recycling industry developed the Recycling Industry Operating Standard (RIOS™), today the only recycling-specific management system standard for quality, environment and health & safety based on the principles of ISO 9001, ISO 14001 and OHSAS 18001. RIOS™ is an example of the industry’s serious commitment to recycling. We were pleased when AQSIQ recognized RIOS™ as one of the prerequisites for foreign suppliers applying for an export license for shipments into China. It is an important tool to increase confidence in China about imported materials. (www.rioscertification.org)

**Carried Waste Standard – Definition and Allowable Percentages**

ISRI understands that at the heart of China’s approach with the proposed GB standards is an effort to identify what is “garbage” so that China can rightfully prevent such material from entering the country. Thus, the GB standards each contain a definition – unique to the commodity at issue – of “carried waste” with corresponding control standards and requirements that are meant to prevent the import of such “garbage.” The concerns with both the definitions and the control standards and requirements are each set out below.

**Definitions of Carried Waste**

In order to ensure that these standards are implemented effectively, it is critical that both the global recycling community and the inspectors assigned to monitor compliance and enforcement – including at CCIC, Customs and AQSIQ – all have a common understanding of what these definitions mean (i.e., what they include and what they do not include) and how they are to be measured. Unfortunately, ISRI has very serious concerns that this is not the case based on conversations within the industry globally as well as the meetings that have occurred within the last six months with Chinese officials in Beijing.

What requires the most attention in terms of clarification is the definition of “carried wastes,” which is too broad in its current form. Because current laws in China use the word “waste” to jointly refer to unusable waste and valuable scrap, its use within the term “other carried wastes” is confusing. In paragraph 4.4 of all the proposed GB standards, broad categories of waste are listed, but these same broad categories also include recyclable material. We suggest the Chinese Government revise its GB standards to very specifically define what is intended to be minimized in terms of the percentages listed, giving particular attention to distinguishing between unusable trash that should have gone to a landfill and recyclable materials that are intended to be used as raw materials for manufacturing. The ISRI Scrap Specifications listed throughout this submission demonstrate the use of specific descriptions of allowable inclusions and prohibitions, providing buyers and sellers the information they need to finalize contracts and help ensure consistent quality in trade.
The following are some of the specific questions that have arisen to date regarding the proposed definitions of carried waste within the various proposed standards:

- The definition of “other carried waste” within Section 4.4 of both GB 16487.6 (Waste and Scrap of Iron and Steel) and GB 16487.7 (Nonferrous Metal Scaps) include “powdery substance.” How does the Chinese Government define “powdery substance”? ISRI’s concern is that some specification-grade scrap commodities, including certain types of copper, oxidize into cupric oxide powders that are still copper and satisfy ISRI Specifications. While we assume that such powder scrap is not considered “other carried waste,” we would suggest providing such clarification in writing.

- As the “other carried waste” definition contained in GB 16487.9 (Waste Wires and Cables) does not include waste plastics, which are often recycled as well, it is ISRI’s assumption that insulated copper wire can continue to be imported into China. It is currently shipped under HS 7404.00.00.10 – Waste wires and cables mainly for the recovery of copper according to the following ISRI Specifications:
  o “Droid” – Insulated Copper Wire Scrap: Shall consist of No. 2 copper wire with various types of insulation. To be sold on a sample or recovery basis, subject to agreement between buyer and seller. Existence of jelly wire subject to agreement between buyer and seller.
  o “Druid” – Insulated Copper Wire Scrap: Shall consist of No 1 bare, uncoated, unalloyed copper wire, not smaller than No. 16 B & S wire gauge (unless smaller wire gauge is mutually agreed upon), with various types of insulation. To be sold on sample or recovery basis, subject to agreement between buyer and seller.

Confirmation that this material can continue to be imported into China is requested because some inspectors have indicated otherwise. In addition, the recycling industry is already experiencing problems at Ports of Entry because customs officials and CIQ inspectors are expecting – even trying to enforce – the new regulations even though they are not yet in place. Thus, written guidance will help reduce such confusion.

We anticipate additional questions about China’s scrap import regulations to arise as our industry tries to adapt to the regulatory changes and therefore we respectfully suggest an opportunity to meet with MEP, SAC, AQSIQ and other relevant authorities for a walk-through of the regulations, enforcement measures and other potential scenarios that could occur in the normal course of trade. As part of this cooperation, we invite officials from the relevant Government agencies to visit our members’ facilities and to see their operations first-hand. ISRI provided such support to AQSIQ approximately ten years ago, and we are happy to do so again.

Control Standards and Requirements: Allowable Percentages for “Other-Carried Waste”

Each proposed GB standard contains a set of control standards and requirements unique to the commodity at issue. And included within each are necessary and appropriate restrictions for radioactive contamination, ammunitions/explosives and hazardous wastes – all of which ISRI agrees with and that generally correspond with global standards. However, each proposed GB standard also contains a catch-all restriction for “other carried-wastes” with a set threshold for the allowable percentage by weight. It is this last restriction that has raised concerns within ISRI and the global recycling industry as the percentages proposed are in many cases (but not all) out of line with global norms and established manufacturing tolerances.
As the predominant source of scrap specifications, ISRI’s Scrap Specifications Circular has been in use for more than eighty years to promote consistency and quality in the trade of scrap around the world, including in China. The Specifications Circular contains several hundred specifications covering ferrous scrap, nonferrous scrap, glass cullet, paper stock, plastic scrap, electronics scrap, and tire scrap (included in Addendum A but also found at www.isri.org/specs where a Chinese translation can also be found). These specifications are used by recyclers in the industry to facilitate the buying and selling of their materials and by customs officials for customs clearance purposes.3

There is no other country in the world that uses its own set of standards as a “pass/fail” test for imports. In fact, the Government of India references the ISRI Specifications within their own rules concerning the import of scrap. The specifications are used by both India Customs and the Indian Directorate of Foreign Trade (DGFT) as a reference point for determining what materials are acceptable for import into India.

The Specifications are also used by Governmental Authorities to help define legitimate recycling and help differentiate what is waste from what is scrap. For example, in the United States, the Definition of Solid Waste in Subtitle C of the Resource Conservation and Recovery Act (RCRA) specifically identifies a product of recycling is still a legitimate product when it meets widely recognized commodity standards (e.g., commodity-grade scrap metal) established by the industry. Furthermore, the Harmonized Tariff System of the United States (HTSUS) specifically cites the ISRI Specifications for iron and steel scrap to identify the materials traded under subheading 7204.4 The United States Government does not have a mandatory set of standards on imports – judgments of quality are made between buyers and sellers with the support of U.S. Government entities to confirm proper identification, handling and processing of the materials.

It is also important to note that despite statements to the contrary by the Ministry of Environmental Protection and other Chinese officials, specification-grade scrap commodities are not waste as defined by the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal and are freely traded under Annex IX of the convention.5

The Specifications are written by the industry in an open and deliberative process in which stakeholders, recyclers, manufacturers, government authorities and the public – have the opportunity to contribute to the writing of Specifications. They are concise but with as much detail as possible to specifically describe the material in terms of what it is, what it includes and what must be excluded. On the

---

3 Although ISRI Specifications are widely used globally, including in Europe, a few select other countries also have standards that govern the quality of scrap processed domestically. We defer to our counterparts in those countries to fully explain their implementation and enforcement. However, in the case of Europe, their domestic standards are not as restrictive as the standards being proposed in China.

4 HTSUS Chapter 72, page 72-6, Statistical Notes 2-3 for subheading 7204.10 “waste and scrap of cast iron” and subheading 7204.41 and 7204.49 for “other waste and scrap” of iron and steel.

5 According to Basel Convention Annex IX, these materials are not “wastes covered by Article 1, paragraph 1(a), of this Convention unless they contain Annex I material to an extent causing them to exhibit Annex III characteristics.” They do not.

- Article 1, paragraph 1(a) states, “The following wastes that are subject to transboundary movement shall be ‘hazardous wastes’ for the purposes of this Convention: [continued in next page]
  (a) Wastes that belong to any category contained in Annex I, unless they do not possess any of the characteristics contained in Annex III; and...”
- Annex I includes medical waste, chemical waste and wastes with harmful chemical “constituents.”
- Annex III characteristics include “explosive,” “flammable,” “combustable,” “oxidization,” “infectious,” “corrosive,” and “toxic.”
exclusions, Specifications incorporate specific thresholds for allowable contaminants – called “prohibitives,” “contaminants” or “impurities” – based on the knowledge and experience of the industry towards meeting the needs of the industrial consumers. They are set knowing the available processing technology on the market and the time and cost requirements of the consumers.

As the “carried waste” thresholds vary by commodity, each is addressed in turn:

**GB 16487.4: Waste and Scrap of Paper or Paperboard [G/TBT/N/CHN/1225]**

Section 4.4 of GB 16487.4 proposes a fixed 0.5% threshold for “other carried wastes” across the board, for all grades of scrap paper and paperboard. In contrast, the allowable comparable thresholds, or “prohibitives”6 found in ISRI’s Specifications Circular are between 0% and 2% for the majority of paper grades (of which there are approximately 50). These levels have been established based on available technology and acceptable tolerances set by the paper manufacturers as it is widely understood globally that different paper stocks and grades have different quality measures.

The following are the allowable percentages of prohibitives for the paper stock grades most commonly exported to China:

<table>
<thead>
<tr>
<th>HS Code</th>
<th>Grade within ISRI Scrap Specifications Circular</th>
<th>Prohibitive Level</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HS 4707.10.00.00:</strong> Recycled (waste and scrap) unbleached kraft, corrugated paper or paperboard</td>
<td>(4) Boxboard Cuttings: Consists of new cuttings of paperboard used in the manufacture of folding cartons, set-up noxes and similar boxboard products.</td>
<td>0.5%</td>
</tr>
<tr>
<td></td>
<td>(11) Old Corrugated Containers (OCC): Consists of corrugated containers having liners of either test liner or kraft.</td>
<td>1%</td>
</tr>
<tr>
<td></td>
<td>(12) Double-sorted Old Corrugated (DS OCC): Consists of double-sorted corrugated containers, generated from supermarkets and/or industrial or commercial facilities, having liners of test liner or kraft. Material has been specially sorted to be free of boxboard, off-shore corrugated, plastic, and wax.</td>
<td>0.5%</td>
</tr>
<tr>
<td><strong>HS 4707.20.00.00:</strong> Recycled (waste and scrap) paper and paperboard made from bleached chemical wood pulp (without mass dyeing)</td>
<td>(37) Sorted Office Paper (SOP): Consists of paper, as typically generated by offices, containing primarily white and colored groundwood-free paper, free of unbleached fiber. May include a small percentage of groundwood computer printout and facsimile paper.</td>
<td>1%</td>
</tr>
<tr>
<td><strong>HS 4707.30.00.00:</strong> Recycled (waste and scrap) paper and paperboard</td>
<td>(9) Over-Issue News (OI or OIN): Consists of unused, overrun newspapers printed</td>
<td>0%</td>
</tr>
</tbody>
</table>

---

6 The ISRI Specifications Circular define prohibitives for paper stock as:

a. Any materials which, by their presence in a packing of paper stock, in excess of the amount allowed, make the packaging unusable as the grade specified.

b. Any materials which, by their presence in a package of paper stock, pose a risk of damage to the equipment.
| made from mechanical wood pulp (such as waste newspapers, magazines and similar printed materials) | on news print, or securely tied in bundles, containing not more than the normal percentage of rotogravure and colored sections. | (56) Sorted Residential Papers & News (SRPN): Consists of sorted newspapers, junk mail, magazines, printing and writing papers and other acceptable papers generated from residential programs (such as residential household and apartment collections and drop-off centers) sorted and processed at a recycling facility. Material should be free of containerboard and brown grades (OCC, Kraft bags, boxboard and Kraft carrier board). | 2% |
| | (40) Sorted White Ledger: Consists of uncoated, printed or unprinted sheets, shavings, guillotined books, and cuttings of white groundwood-free ledger, bond, writing, and other paper which has similar fiber and filler content. | 0.5% |

The most sophisticated Materials Recovery Facilities (MRF) within the United States utilize a combination of mechanical and manual sorting techniques in a multi-step process to separate paper and paperboard from other waste and recyclable materials. The materials pass through two stages to separate cardboard from everything else, including glass that is the most harmful to paper recycling. There are then another 3-5 stages to separate other paper and remaining cardboard from plastics and metals. The result are bales of paper and paperboard according to an ISRI Specification.

Inevitably, trace amounts of other recyclable materials and waste are not separated by the machines, but MRFs employ their own inspectors and work closely with CCIC inspectors to find and remove as much of that leftover waste as possible, which usually does not exceed a fraction above the allowable prohibitive thresholds in the ISRI Specification for that material. But on occasion such materials are not found because of copy-cat characteristics (i.e., a flat plastic container with a colorful label that matches the label of a corrugated cardboard box). For this reason, the ISRI Specifications detail allowable thresholds for prohibitives for each grade according to the sorting technology currently available to the recycling industry.

This recycling process is generally the same worldwide. For that reason, it is our understanding that studies done by Chinese paper recycling analysts conclude that even a bale of the highest quality, double-sorted Old Corrugated Cardboard (OCC) run through the most sophisticated sorting process cannot meet the proposed 0.5% “carried waste” threshold.

Furthermore, the exact level of contamination in paper grades cannot be found until after the pulping process has begun. This is done by measuring the difference between the amount of material that goes in and the amount of pulp that comes out. Then, the pulp goes through wet-testing to test the strength of the material. If it fails, then it is acknowledged that some contamination was included, and the rejected pulp is sent to a facility to burn for energy. Thus, even the small amounts of paper that, after pulping, is found to have had contaminants can be disposed of properly.
It is for these reasons that ISRI respectfully suggests that China utilize the ISRI Specification levels for prohibitives in the finalized GB 16487.4 standard for Waste and Scrap of Paper or Paperboard.

**GB 16487.7: Nonferrous Metal Scraps [G/TBT/N/CHN/1228]**

Section 4.4 of GB 16487.7 proposes a fixed 1% threshold for “other carried wastes” across the board, for all grades and alloys of nonferrous metals. In contrast, there are more than 150 Specifications for nonferrous scrap, each with its own code word, description and maximum allowed impurities between 0% and 4%. These levels have been established based on available sorting technology and acceptable tolerances set by metals manufacturers as it is widely understood globally that different grades and alloys have different quality measures. The code words are used in negotiations to allow contracting parties to speak a unique language when their native languages are not the same. Chinese scrap consumers are among the most fluent and dependent on the use of the code words in ISRI Specifications. Of note, in 2005, the Beijing Zhongse Recycling Metals Institute licensed ISRI’s nonferrous specifications for use in China.

The following are the allowable percentages of impurities for nonferrous materials commonly exported to China, as specified in the ISRI Scrap Specifications Circular:

<table>
<thead>

<tbody>
<tr>
<td><strong>HS 7404.00.90</strong>: Other copper wastes and scraps</td>
<td>“Cliff” – No. 2 Copper Solids and Tubing: Shall consist of miscellaneous, unalloyed copper scrap having a nominal 96% copper content (minimum 94%) as determined by electrolytic assay. Should be free of the following: Excessively leaded, tinned, soldered copper scrap; brasses and bronzes; excessive oil content, iron and non-metallics; copper tubing with other than copper connections or with sediment; copper wire from burning; insulation; hair wire; brittle burnt wire; and should be reasonably free of ash. Hydraulically briquetted copper subject to agreement.</td>
<td>4%</td>
</tr>
<tr>
<td><strong>HS 7602.00.90</strong>: Other aluminum wastes and scraps</td>
<td>“Honey” – Yellow Brass Scrap: Shall consist of mixed yellow brass solids, including brass castings, rolled brass, rod brass, tubing and miscellaneous yellow brasses, including plated brass. Must be free of Manganese-bronze, aluminum-bronze, unsweated radiators or radiator parts, iron, and excessively dirty and corroded materials. Must also be free of any type of munitions including, but not limited to, bullet casings.</td>
<td>n/a</td>
</tr>
<tr>
<td>Description</td>
<td>Quantity</td>
<td></td>
</tr>
<tr>
<td>----------------------------------------------------------------------------</td>
<td>----------</td>
<td></td>
</tr>
<tr>
<td><strong>Alloys, free of foil, venetian blinds, castings, hair wire, screen wire, food or beverage containers, radiator shells, airplane sheet, bottle caps, plastic, dirt, and other non-metallic items. Oil and grease not to total more than 1%. Up to 10% Tale permitted.</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>“Twitch” – Floated Fragmentizer Aluminum Scrap (from Automobile Shredders):</strong></td>
<td>2%</td>
<td></td>
</tr>
<tr>
<td>Derived from wet or dry media separation device, the material must be dry and not contain more than 1% maximum free zinc, 1% maximum free magnesium, and 1% maximum of analytical iron. Not to contain more than a total 2% maximum of non-metals, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material, air bag canisters, or any sealed or pressurized items. Any variation to be sold by special arrangement between buyer and seller.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>“Zorba” – Shredded Nonferrous Scrap (predominantly aluminum):</strong></td>
<td>Variable</td>
<td></td>
</tr>
<tr>
<td>Shall be made up of a combination of the nonferrous metals: aluminum, copper, lead, magnesium, stainless steel, nickel, tin, and zinc, in elemental or alloyed (solid) form. The percentage of each metal within the nonferrous concentrate shall be subject to agreement between buyer and seller. Material generated by eddy current, air separation, flotation, screening, other segregation technique(s), or a combination thereof. Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zorba” with a number to follow indicating the estimated percentage of nonferrous metal content of the material (e.g., “Zorba 90” means the material contains approximately 90% nonferrous metal content). May also be screened to permit description by specific size ranges.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

In the automobile shredding process, the vehicle is first stripped of its battery and fluids. It is then often times flattened, which inevitably breaks the glass contained in the windows and wind-screens. The flattened cars are sent up a conveyor belt and run through shredders to cut the materials down to
smaller pieces. The scrap is then run through a series of magnets to separate out the ferrous scrap. The materials that are not captured by the magnet contain nonferrous and other non-metallic materials. They are then sent through sensory technology to separate the metals from the non-metallic materials. One of the resulting products is a stock of nonferrous metals, most often in the form of “Zorba” (see above) or “Zurik,” which can often times be smelted with little or no further processing.

Nonferrous scrap is also commonly sourced from industrial operations, such as cuttings, clippings and stampings from manufacturing. They are sorted according to metal grade and alloy and then packaged and prepared for shipment according to ISRI Specifications. These materials are not mixed with the types of household and organic waste that China seeks to prevent from import into the country.

For these reasons, ISRI respectfully suggests that China utilize the ISRI Specification definitions and levels for prohibitives in the finalized GB 16487.7 standard for Nonferrous Metals Scrap.

**GB 16487.9: Waste Wires and Cables [G/TBT/N/CHN/1230]**
Section 4.4 of GB 16487.8 proposes a fixed 0.5% threshold for “other carried wastes” in all Waste Electric Motors.

<table>
<thead>
<tr>

</tr>
<tr>
<td>7602.00.00.10: Waste wires and cables mainly for the recovery of aluminum</td>
<td>“Trill ACSR”: Aluminum Conductor Steel Reinforced (ACSR) wire is a combination of steel and aluminum wire, of various configurations, with the expected aluminum recovery agreed upon by the buyer and the seller. Material to be free of other wires and cables unless mutually agreed upon.</td>
</tr>
<tr>
<td></td>
<td>“Twang IAW”: Insulated aluminum wire, which may or may not contain other wires or metal shielding, with the expected aluminum recovery agreed upon by the buyer and the seller. The material to be free of other wires and cables unless mutually agreed upon.</td>
</tr>
</tbody>
</table>

Insulated copper wire consists of copper wire insulated with PVC or other type of plastic. The wires are wound tightly together, baled and shipped to a recycler fitted with wire chopping and/or wire stripping technology. The process does just that – strips the plastic sheathing from the copper wire or chops the wires into smaller pieces and uses a combination of technologies to separate the copper pieces from the

---

7 “Zurik” – Shredded Nonferrous Sensor Sorted Scrap (predominantly stainless steel): Shall be made up of a combination of the nonferrous metals: stainless steel, insulated copper wire, aluminum, copper, lead, magnesium, nickel, tin, and zinc, in elemental or alloyed (solid) form. The percentage of each metal within the nonferrous concentrate shall be subject to agreement between buyer and seller. Material generated by computer sensing equipment (e.g., induction sensor sorting or X-ray) technique(s). Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zurik” with a number to follow indicating the estimated percentage nonferrous content of the material (e.g., “Zurik 90” means the material contains approximately 90% nonferrous metal content). May also be screened to permit description by specific size ranges.
Insulation pieces. The copper is sent to a copper melter, and the insulated material is sent to a recycler for further processing in preparation for the plastic manufacturing process.

In short, insulated copper wire is made up of completely recyclable materials. Thus, as noted above, we assume that the definition of “other carried waste” as cited in GB 16487-9 Waste Wires and Cables only applies to “waste paper, wood waste and waste glass” and does not include plastics.

In addition, ISRI has separate specifications for insulated and non-insulated copper and aluminum wire. The non-insulated wires are:

<table>

</tbody>
</table>

- Are “Birch,” “Talon” and “Tann” regulated under GB 16487-7 as Nonferrous Metal Scraps since they consist only of copper and aluminum and require no additional hand-processing (i.e., may be sold directly to a manufacturer that melts copper or smelts aluminum)? Or are “Birch,” “Talon” and “Tann” regulated under GB 16487-9 because the copper and aluminum come in the form of a wire, even though they are not insulated by another material?
- Furthermore, as Chinese importers purchase materials under ISRI Specification “Birch/Cliff,” which consist only of copper and no additional incorporated materials but are a mix of copper products that come in various forms, would this be regulated under GB 16487-7 as Nonferrous Metal Scraps?

GB 16487.12: Waste and Scrap of Plastics [G/TBT/N/CHN/1233]
Section 4.4 of GB 16487.12 proposes a fixed 0.5% threshold for “other carried wastes” across the board, for all grades of plastic. In contrast, the allowable comparable thresholds for “allowable contamination” in ISRI Specifications may not exceed 2% of total bale weight.\(^9\)

\(^8\) “Birch/Cliff”: A combination of No. 2 copper wire and copper as defined in “Birch” and “Cliff.” See above.
\(^9\) The guidance on “allowable contamination” in the ISRI Scrap Specification Circular is as follows: “Unspecified materials must not exceed 2% of total bale weight. Bales which contain over 2% will be subjected to reduction in the contracted price of the material as well as charges for disposal of the contaminants. The reduced percentage will vary depending upon the amount and type of contamination. Quality of the baled plastic is the primary factor which determines the value.”
We understand that China is looking to prohibit the importation of bales of plastic food and drink containers, but much of the plastic collected from residential and industrial sources are cleaned and processed into a form that is widely accepted and coveted by plastics producers. The plastic—in whatever shape and form it comes in—is first separated according to type and color. The plastic is then run through a washing process that completely removes residues. After washing, the materials are ground down to “repro,” “regrind” (i.e., pellets\(^{10}\) or “flakes,” packaged, and sent directly to the plastics manufacturer. No matter the source, or the final form, these plastics are clean and ready for use.

Therefore, we respectfully request clarification that plastic in “repro,” “regrind” and “flake” form that have gone through this separation and washing process can be imported into China, regardless of whether originally sourced from residential, commercial or industrial operations.

**GB 16487.6: Waste and Scrap of Iron and Steel [G/TBT/N/CHN/1227]**

Section 4.4 of GB 16487.6 proposes a fixed 0.5% threshold for “other carried wastes” across the board, for all grades and alloys of scrap iron and steel. In contrast, while ISRI Specifications do not set specific thresholds for contaminants, it is widely acknowledged by ferrous scrap recyclers and steel mills that minor amounts of foreign materials are not harmful to the smelting process.

Because of their magnetic characteristics, iron and steel scrap are quite easily separated from other materials simply with the use of magnets in the separation process. In the automobile shredding process described above, after a vehicle emerges from the shredders, the pile of scrap is run through a series of magnets to separate the ferrous scrap from the rest of the materials. The ferrous scrap is then loaded into containers with the use of cranes fitted with powerful magnets, a process that nearly eliminates the inclusion of non-magnetic materials.

Occasionally, ferrous scrap has traces of paint and plastic that are not harmful to the smelting process, and trace amounts of other materials may get caught in the tangled metal scrap. It is our understanding based on previous conversations in China that this material does not constitute “other carried waste.” Written confirmation of this is suggested so as to avoid confusion during inspections at Ports of Entry.

**Timeline for Implementation**

If the GB standards were implemented in their current form on 1 March 2018, that would provide exporters less than one month to make investments and incorporate needed processing changes for shipments that must leave in January for arrival on or after 1 March. Such investment takes time for integration, but without clear guidance on the questions listed above, suppliers are uncertain as to exactly what they need to integrate. Therefore, we anticipate significant disruptions in Chinese manufacturers’ access to needed inputs if there will be no delay in the implementation of these standards.

As a trade association, ISRI provides a range of services to help our members improve their operations, adapt to changing markets and comply with regulations around the world in order to keep the scrap trade flowing. The environment for scrap trade is ever-changing, but ISRI prides itself in providing comprehensive and timely information to our members. As a result, our member companies have incorporated industry best practices to produce the highest quality materials as demanded by their members.

---

\(^{10}\) Pellets are plastic that has been ground and formed in a new shape that is easily used in the manufacturing of new products. Because of this substantial transformation, pellets are traded as a plastic product and not scrap.
customers and in compliance with export/import, environmental and safety regulations in the United States and around the world.

For these reasons, ISRI respectfully suggests that the Chinese Government delay its implementation of the proposed GB standards for a time period consistent with WTO guidelines. Extra time is required for recyclers to fully understand China’s changing scrap import regulations and to make the necessary changes to comply with these new rules. ISRI is committed to working with both the recycling industry and the Chinese Government to help promote compliance with the new standards as well as to work cooperatively with AQSIO and CCIC to ensure that inspectors are properly trained so as to provide consistent enforcement, including hosting officials for visits to our operations as we have done in the past. The extra time to allow for such efforts will help increase compliance rates and ensure that China receives only the high value scrap commodities in demand by Chinese manufacturers imported in full compliance with China’s environmental and trade regulations.

**Additional Questions**

ISRI’s submission to the WTO TBT committee in response to Docket Number G/TBT/N/CHN/1211 (*Catalogue of Solid Wastes Forbidden to Import into China by the End of 2017*) contained a series of questions about the scope of the materials intended for prohibition into China. We have received some guidance but not enough to ensure that our members fully and properly comply with China’s scrap import regulations. ISRI wishes to resubmit the following questions:

**HS 4707.90.00.90 – Other, including unsorted waste and scrap**

As there is no specification grade within the ISRI Specifications Circular related to paper that corresponds directly to the harmonized tariff code, questions surround the applicability of G/TBT/N/CHN/1211 to grades that may be similar, including:

- (54) Mixed Paper (MP): Consists of all paper and paperboard of various qualities not limited to the type of fiber content, sorted and processed at a recycling facility. Prohibitive Materials may not exceed 2%.

  Is sorted recovered fiber imported under paper grade “(54) Mixed Paper (MP),” allowed or forbidden to import into China?

  Is “mixed paper” that has been sorted and processed to remove prohibitive materials before export by residential recycling sources such as Materials Recovery Facilities (MRFs) or paper stock plants, and shipped as sorted mixed paper according to paper grade 54 as described above, allowed or forbidden to import into China?

- (11) Old Corrugated Containers (OCC): Consists of corrugated containers having liners of either test liner or kraft. Prohibitive materials may not exceed 1%.

  It is presumed that “(11) Old Corrugated Containers (OCC)” is not included in this category, but such confirmation is needed.

**HS 3915 – Waste, parings and scrap, of plastics**
As there is no specification grade within the ISRI Specifications Circular related to plastics that corresponds directly to the harmonized tariff code, questions surround the applicability of G/TBT/N/CHN/1211, including:

- Are all bales composed of plastics originating from post-consumer sources (i.e., households/residential sources) forbidden to import into China, or only those plastics that have come into contact with organic materials (i.e., living sources)?
- Are containers of plastic from household/residential sources that have been processed, cleaned and ground into usable form – such as “regrind,”11 “repro,”12 “flake” form (as described above) – allowed, or forbidden, to import into China?
- Is Clear LDPE Grade A in Bales allowed or forbidden to import into China?

CONCLUSION

It is our understanding that implementing agencies within the Chinese Government will be required to implement these rules as quickly as possible. We are asking for written guidance to the questions raised by the global recycling industry that can help facilitate the inspections and entry procedures for scrap commodities.

Also, because of our long history of experience, we welcome the opportunity to share with the relevant groups in China insights into how our companies handle scrap materials safely and with environmental sustainability in mind. This would include identifying specification-grade scrap versus unusable trash, understanding and recognizing international certifications, such as RIOS™, ISO 9001, ISO 14001, Basel Convention, etc. and safeguarding the environment. The following is just some of the areas for which we have expertise:

- **Recommended Industry Safety Practice**: Guidance for worker safety in confined space, protective equipment, proper training and emergency response.
- **Environmental Compliance**: Understanding the tenets and compliance requirements of a central government’s environmental laws, specific guidance for hazardous versus non-hazardous materials, waste management, oil-spill prevention and proper handling of chemicals.
- **Hazard Recognition**: How to recognize, assess and correct safety hazards; fire prevention methods; and safety around mobile equipment.
- **Identifying Radioactivity**: What materials are susceptible, what equipment to use to measure radioactivity and disposal requirements.
- **Storm Water Management**: Measures used to reduce the amount of pollutants in storm water runoff.
- **Environmental, Health and Safety Management**: Operating standards, such as RIOS™, that incorporate management structures for environmental compliance, improve health and safety, strengthen the quality of the material and enhance environmental responsibility.

---

11 “Regrind” is a generic term that refers to “hard rigid plastic typically ground into a chip. Typically consists of material that is the same grade, color and type. It can be used in extrusion or molding processes.” Source: 2017 ISRI Scrap Specifications Circular.
12 “Repro” refers to regrind that is pelletized.
We can also share information and analysis of market conditions and how to develop supply chains to ensure the efficient use of scrap materials, especially with environmental sustainability in mind. ISRI’s Annual Scrap Yearbook has much of the information included in this submission and of use to the Chinese Government and is available in Chinese (www.scrap2.org/chineseyearbook/). Recognizing industry-wide standards as outlined in the ISRI Specifications Circular will go a long way to ensuring that China’s goals are met through the import of high value, scrap commodities.

China is quickly becoming a world leader in enhancing environmental protection and developing a Circular Economy for the entire international community. The recycling industry is an environmentally-friendly sector that turns products at the end of their useful life into resources. ISRI has witnessed the growth and maturity of the global recycling industry through several generations. We hope China can utilize the experiences and expertise of the recycling industry to make China and the world a better place to live.

In short, we are here to support the Chinese government’s efforts to improve environmental protection and to prevent a disruption in trade of specification-grade commodity materials that are in high-demand in China and supplied from the United States.

Sincerely,

Robin K. Wiener
President

PREFACE

The standard specifications included in this Circular are intended to assist members in the buying and selling of their materials and products.

These specifications are derived from many sectors of the metals, paper stock, plastics, glass, and electronics industries and are constructed to represent the quality or composition of the materials bought and sold in the industry. The specifications are internationally accepted and are used throughout the world to trade the various commodities.

Parties to a transaction may specify particular variations or additions to these specifications as are suited for their specific transactions and for their individual convenience. Any deviation from the standard specifications, however, should be mutually agreed to and so stipulated in writing by the parties to the transactions.

ISRI maintains an Arbitration Service as a means of enabling members to settle differences between themselves or between one of them and a non-member.

In addition, the “Guidelines for Metals Transactions” contain supplementary information that will aid members in completing their business transactions. It is recommended that these Guidelines be reviewed and that members use them in conjunction with the actual specifications in the conduct of their business.

ISRI’s Scrap Specifications Circular is posted in PDF format at least once per year on the ISRI web site. To ensure you have the most up-to-date version, visit isri.org/specs.
Rules Governing the Procedures for the Addition, Amendment, or Withdrawal of Scrap Specifications

1.0 Initiation of Request. Any person may file a request to add, amend or withdraw a specification by submitting such request in writing to the ISRI President.

1.1 The President shall refer such request to the Chair of the appropriate Division Specifications Committee (the “Committee”), with copies to:
   A. ISRI’s Officers;
   B. The Chair of any ISRI Division and/or Committee that might be affected by the specification.

2.0 Committee Action. Following presentation by all interested parties, the Committee shall review the request and:
   A. Act upon it prior to the next meeting of the Board, as set forth in Section 2.1; or
   B. Refer it to a subcommittee for review and recommendation for action by the full Committee at its next meeting.

2.1 The Committee shall summarize the positions advocated by the various parties interested in the request and recommend to the appropriate division and the Board of Directors what action should be taken.

3.0 Notice. A notice of the Committee recommendations shall be distributed to all ISRI members, a news release will be distributed to industry trade publications and a notice will be posted on the ISRI website at least twenty days before the request will be considered by the Board of Directors. Such notice shall state:
   A. The date, time and place at which the request will be considered by the Board;
   B. That the proceeding at which the request will be considered shall be open to the public;
   C. That interested parties may participate in the proceeding by personal appearance or by submitting written comments;
   D. A summary of the specification and the matter to be considered at the meeting.

4.0 Board of Directors Action. The Board of Directors, at its meeting at which the report and recommendation of the Committee has been made, may adopt, amend or reject the recommendation or table it pending further review and recommendation by the Committee.

4.1 Notice of the action taken by the Board shall be given to all interested parties who actively participated in the Committee proceeding and any other persons who have requested in writing notice of the Board’s action. Notice of said action also shall be distributed to all ISRI members, a news release will be distributed to industry trade publications and a notice will be posted on the ISRI website on or before ten days following the Board’s action.

5.0 Appeal. On or before thirty days after the date of the notice required in Section 6.1, any party may appeal the decision of the Board by written notice to the President. Said appeal shall state the reasons for the appeal and the requested action to be taken. Notice of said appeal shall be given in accordance with Section 1.0.

5.1 The appeal shall be heard by the Board at its next meeting following receipt of the appeal.

5.2 The appellant and all interested parties shall be given at least twenty days notice of the date, time and place of the hearing, and like notice shall be inserted in the ISRI newsletter at least twenty days prior to the hearing.

5.3 At the hearing, the appellant and any other interested party may appear either in person or by written presentation and state their reasons for the appeal.

5.4 The Board, following said hearing, shall review and act upon the appeal. Notice of the Board’s action shall be given in accordance with Section 4.1.

6.0 Records. ISRI shall maintain for not less than five years following the date of termination of the proceedings, records of the original request, summaries of the deliberations and recommendations of the Committee, action of the Board, summaries of the appeal and final decision, if any, of the Board, together with the positions of interested parties, copies of notices sent to interested parties and inserted in the ISRI newsletter and national trade publications, written statements, and the reasons for recommendation and final action by the Committee and the Board.

6.1 Said records shall be available for review by the public upon reasonable notice.
Guidelines for Nonferrous Scrap: NF-2017

Note: When the individual scrap grades in this Circular, denoted by the various code words, are used, an agreement between parties is also bound by the terms of “Apple” as it appears below, unless the terms and conditions of a specific contract provide otherwise, in which case the specific contractual provisions shall govern.

<table>
<thead>
<tr>
<th>CODE</th>
<th>ITEM</th>
<th>Nonferrous Terms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apple</td>
<td>a. Delivery of more or less of the specified quantity up to 3 percent is permissible.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>b. A ton shall be understood to be 2,000 pounds, unless otherwise specified.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>c. If any portion of the goods covered by a contract are unshipped or undelivered within the time specified in a contract, then that portion is subject to cancellation by the buyer and/or the buyer has the right to hold the seller responsible for substantiated damages.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>d. If for any portion of a contract the buyer fails in a timely manner to open a Letter of Credit and/or fails to provide proper conveyance and/or shipping instructions as specified in the contract, then that portion is subject to cancellation by the seller and/or the seller has the right to hold the buyer responsible for substantiated damages.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>e. If a significant weight or quality difference is apparent, the seller should be notified promptly and, if requested, another weight or quality determination should be taken. Seller and/or buyer should be given the opportunity to appoint an independent surveyor or a representative to verify weights and/or quality.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>For purposes of this section, the meaning of the word “significant” shall be determined by agreement between buyer and seller, depending on the commodities and their values.</td>

**RED METALS**

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

**Barley** No. 1 COPPER WIRE  
Shall consist of No. 1 bare, uncoated, unalloyed copper wire, commonly known as Bare Bright copper wire. Wire gauge subject to agreement between buyer and seller. Green copper wire and hydraulically compacted material to be subject to agreement between buyer and seller.

**Berry** No. 1 COPPER WIRE  
Shall consist of clean, untinned, uncoated, unalloyed copper wire and cable, free of brittle burnt wire. Wire gauge subject to agreement between buyer and seller. Free of copper tubing. Hydraulically briquetted copper subject to agreement.

**Birch** No. 2 COPPER WIRE  
Shall consist of miscellaneous, unalloyed copper wire having a nominal 96% copper content (minimum 94%) as determined by electrolytic assay. Should be free of the following: Excessively leaded, tinned, soldered copper wire; brass and bronze wire; excessive oil content, iron, and non-metallics; copper wire from burning; insulation; hair wire; brittle burnt wire; and should be reasonably free of ash. Hydraulically briquetted copper subject to agreement.

**Candy** No. 1 HEAVY COPPER SOLIDS AND TUBING  
Shall consist of clean, unalloyed, uncoated copper clippings, punchings, bus bars, commutator segments, and clean copper tubing. Hydraulically briquetted copper subject to agreement.

**Berry/Candy Candy/Berry**  
A combination of copper wire and heavy copper as defined in Berry and Candy. See above.

**Cliff** No. 2 COPPER SOLIDS AND TUBING  
Shall consist of miscellaneous, unalloyed copper scrap having a nominal 96% copper content (minimum 94%) as determined by electrolytic assay. Should be free of the following: Excessively leaded, tinned, soldered copper scrap; brasses and bronzes; excessive oil content, iron and non-metallics; copper tubing with other than copper connections or with sediment; copper wire from burning; insulation; hair wire; brittle burnt wire; and should be reasonably free of ash. Hydraulically briquetted copper subject to agreement.
Guidelines for Nonferrous Scrap

CODE ITEM

Birch/Cliff
A combination of No. 2 copper wire and copper as defined in Birch and Cliff. See above.

Clove No. 1 COPPER WIRE NODULES
Shall consist of No. 1 bare, uncoated, unalloyed copper wire scrap nodules, chopped or shredded, free of tin, lead, zinc, aluminum, iron, other metallic impurities, insulation, and other foreign contamination. Minimum copper 99%. Gauge smaller than No. 16 B & S wire and hydraulically compacted material subject to agreement between buyer and seller.

Cobra No. 2 COPPER WIRE NODULES
Shall consist of No. 2 unalloyed copper wire scrap nodules, chopped or shredded, minimum 97% copper. Maximum metal impurities not to exceed 0.50% aluminum and 1% of each of other metals or insulation. Hydraulically compacted material subject to agreement between buyer and seller.

Cocoa COPPER WIRE NODULES
Shall consist of unalloyed copper wire scrap nodules, chopped or shredded, minimum 99% copper. Shall be free of excessive insulation and other non-metals. Maximum metal impurities as follows:
Aluminum .05% Antimony .01%
Tin .25% Iron .05%
Nickel .05%
Hydraulically compacted material subject to agreement between buyer and seller.

Dream LIGHT COPPER
Shall consist of miscellaneous, unalloyed copper scrap having a nominal 92% copper content (minimum 88%) as determined by electrolytic assay and shall consist of sheet copper, gutters, downspouts, kettles, boilers, and similar scrap. Should be free of the following: Burnt hair wire; copper clad; plating racks; grindings; copper wire from burning, containing insulation; radiators and fire extinguishers; refrigerator units; electrolyte shells; screening; excessively leaded, tinned, soldered scrap; brasses and bronzes; excessive oil, iron and non-metals; and should be reasonably free of ash. Hydraulically briquetted copper subject to agreement. Any items excluded in this grade are also excluded in the higher grades above.

Drink REFINERY BRASS
Shall contain a minimum of 61.3% copper and maximum 5% iron and to consist of brass and bronze solids and turnings, and alloyed and contaminated copper scrap. Shall be free of insulated wire, grindings, electrolyte shells and non-metals. Hydraulically briquetted material subject to agreement.

Droid INSULATED COPPER WIRE SCRAP
Shall consist of No. 2 copper wire (see Birch) with various types of insulation. To be sold on a sample or recovery basis, subject to agreement between buyer and seller. Existence of jelly wire subject to agreement between buyer and seller.

CODE ITEM

Drove COPPER-BEARING SCRAP
Shall consist of miscellaneous copper-containing skimmings, grindings, ashes, iron brass and copper, residues and slags. Shall be free of insulated wires; copper chlorides; unprepared tangled material; large motors; pyrophoric material; asbestos brake linings; furnace bottoms; high lead materials; graphite crucibles; and noxious and explosive materials. Fine powdered material by agreement. Hydraulically briquetted material subject to agreement.

Druid INSULATED COPPER WIRE SCRAP
Shall consist of No. 1 bare, uncoated, unalloyed copper wire (see Barley), not smaller than No. 16 B & S gauge (unless smaller wire gauge is mutually agreed upon), with various types of insulation. To be sold on sample or recovery basis, subject to agreement between buyer and seller.

Ebony COMPOSITION OR RED BRASS
Shall consist of red brass scrap, valves, machinery bearings and other machinery parts, including miscellaneous castings made of copper, tin, zinc, and/or lead. Shall be free of semi-red brass castings (78% to 81% copper); railroad car boxes and other similar high-lead alloys; cocks and faucets; closed water meters; gates; pot pieces; ingots and burned brass; aluminum, silicon, and manganese bronzes; iron and non-metals. No piece to measure more than 12” over any one part or weigh over 100 lbs. Heavier pieces acceptable upon mutual agreement between buyer and seller.

Ebulent LEAD-FREE BISMUTH BRASS SOLIDS
Shall consist of scrap castings alloyed with copper, tin, bismuth, and zinc. Castings shall be free of leaded brass attachments and have less than 0.2% alloyed lead or as agreed between buyer and seller. Examples that meet this specification include, but are not limited to, CDA 89833/35/36/37/41/42 and 45.

Ecstatic LEAD-FREE BISMUTH BRASS TURNINGS
Shall consist of scrap borings and turnings alloyed with copper, tin, bismuth, and zinc. Turnings shall be unmixed and have less than 0.2% alloyed lead or as agreed between buyer and seller. Examples that meet this specification include, but are not limited to, CDA 89833/35/36/37/41/42 and 45.

Eland HIGH GRADE–LOW LEAD BRONZE/BRASS SOLIDS
It is recommended these materials be sold by analysis.

Elder GENUINE BABBITT-LINED BRASS BUSHINGS
Shall consist of red brass bushings and bearings from automobiles and other machinery, shall contain not less than 12% high tin-base babbitt, and shall be free of iron-backed bearings.

Elias HIGH LEAD BRONZE SOLIDS AND BORINGS
It is recommended that these materials be sold on sample or analysis.

Enerv RED BRASS COMPOSITION TURNINGS
Shall consist of turnings from red brass composition material and should be sold subject to sample or analysis.

**SCRAP SPECIFICATIONS CIRCULAR 2017**

**MACHINERY OR HARD BRASS SOLIDS**
Shall have a copper content of not less than 75%, a tin content of not less than 6%, and a lead content of not less than 6% nor more than 11%, and total impurities, exclusive of zinc, antimony, and nickel of not more than 0.75%; the antimony content not to exceed 0.50%. Shall be free of lined and unlined standard red car boxes.

**MACHINERY OR HARD BRASS BORINGS**
Shall have a copper content of not less than 75%, a tin content of not less than 6%, and a lead content of not less than 6% nor more than 11%, and the total impurities, exclusive of zinc, antimony, and nickel of not more than 0.75%; the antimony content not to exceed 0.50%.

**UNLINED STANDARD RED CAR BOXES (CLEAN JOURNALS)**
Shall consist of standard unlined and/or sweated railroad boxes and unlined and/or sweated car journal bearings, free of yellow boxes and iron-backed boxes.

**LINED STANDARD RED CAR BOXES (LINED JOURNALS)**
Shall consist of standard babbitt-lined railroad boxes and/or babbitt-lined car journal bearings, free of yellow boxes and iron-backed boxes.

**COCKS AND FAUCETS**
Shall consist of mixed clean red and yellow brass, including chrome or nickel-plated, free of gas cocks, beer faucets, and aluminum and zinc base die cast material, and to contain a minimum of 35% semi-red.

**YELLOW BRASS SCRAP**
Shall consist of mixed yellow brass solids, including brass castings, rolled brass, rod brass, tubing and miscellaneous yellow brasses, including plated brass. Must be free of manganese-bronze, aluminum-bronze, unsweated radiators or radiator parts, iron, and excessively dirty and corroded materials. Must also be free of any type of munitions including, but not limited to, bullet casings.

**YELLOW BRASS CASTINGS**
Shall consist of yellow brass castings in crucible shape, no piece to measure more than 12 inches over any one part; and shall be free of brass forgings, silicon bronze, aluminum bronze and manganese bronze, and not to contain more than 15% nickel plated material.

**NEW BRASS CLIPPINGS**
Shall consist of the cuttings of new unleaded yellow brass sheet or plate, to be clean and free from foreign substances and not to contain more than 10% of clean brass punchings under 1/8 inch. To be free of Muntz metal and naval brass.

**BRASS SHELL CASES WITHOUT PRIMERS**
Shall consist of clean fired 70/30 brass shell cases free of primers and any other foreign material. For material to be exported from the United States, all shells must be sufficiently mutilated to prevent reuse and reloading.

**BRASS SHELL CASES WITH PRIMERS**
Shall consist of clean fired 70/30 brass shell cases containing the brass primers, and containing no other foreign material. For material to be exported from the United States, all shells must be sufficiently mutilated to prevent reuse and reloading.

**BRASS SMALL ARMS AND RIFLE SHELLS, CLEAN FIRED**
Shall consist of clean fired 70/30 brass shells free of bullets, iron and any other foreign material. For material to be exported from the United States, all shells must be sufficiently mutilated to prevent reuse and reloading.

**BRASS SMALL ARMS AND RIFLE SHELLS, CLEAN MUFFLED (POPPED)**
Shall consist of clean muffled (popped) 70/30 brass shells free of bullets, iron and any other foreign material. For material to be exported from the United States, all shells must be sufficiently mutilated to prevent reuse and reloading.

**YELLOW BRASS PRIMER**
Shall consist of clean yellow brass primers, burnt or unburnt. Shall be free of iron, excessive dirt, corrosion and any other foreign material.

**MIXED NEW NICKEL SILVER CLIPPINGS**
Shall consist of one or more nickel silver alloys and the range of nickel content to be specified, free of chrome or any other plating material. Leaded nickel silver clippings should be packed and sold separately. Not to contain more than 10% of clean punchings under 1/4 inch.

**NEW NICKEL SILVER CLIPPINGS AND SOLIDS**
Shall consist of new, clean nickel silver clippings, plate, rod and forgings, and other rolled shapes, free of chrome or any other plating material. Must be sold on nickel content specifications such as 10%-12%-15%-18%-20%. Leaded nickel silver clippings should be packed and sold separately. A description as to its physical characteristics should be made in offering all nickel silver material.

**NEW SEGREGATED NICKEL SILVER CLIPPINGS**
Shall consist of one specified nickel silver alloy. Not to contain more than 10% of clean punchings under 1/4 inch.

**OLD NICKEL SILVER**
Shall consist of old nickel silver sheet, pipe, rod, tubes, wire, screen, soldered or unsoldered. Must not be trimmed seams alone, and must also be free of foreign substances, iron rimmed material and other metals.

**BRASS PIPE**
Shall consist of brass pipe free of plated and soldered materials or pipes with cast brass connections. To be sound, clean pipes free of sediment and condenser tubes.

**NICKEL SILVER CASTINGS**
To be packed and sold separately.
### Guidelines for Nonferrous Scrap

</thead>
<tbody>
<tr>
<td>Niece</td>
<td>NICKEL SILVER TURNINGS</td>
<td>To be sold by sample or analysis.</td>
</tr>
<tr>
<td>Nascent</td>
<td>LEADED BRASS SCRAP TURNINGS</td>
<td>Shall consist of scrap borings and turnings alloyed with copper, zinc, and lead. Turnings shall be unmixed and have less than 0.01% alloyed bismuth and silicon each and other impurities as agreed between buyer and seller.</td>
</tr>
<tr>
<td>Niche</td>
<td>LEADED BRASS SCRAP ROD ENDS AND FORGINGS</td>
<td>Shall consist of scrap rod ends and forgings alloyed with copper, zinc, and lead. Solids shall have less than 0.01% alloyed bismuth and silicon each and other impurities as agreed between buyer and seller.</td>
</tr>
<tr>
<td>Night</td>
<td>YELLOW BRASS ROD TURNINGS</td>
<td>Shall consist strictly of rod turnings, free of aluminum, manganese, composition, Tobin and Muntz metal turnings; not to contain over 3% free iron, oil or other moisture; to be free of grindings and babbitts; to contain not more than 0.30% tin and not more than 0.15% alloyed iron.</td>
</tr>
<tr>
<td>Noble</td>
<td>NEW YELLOW BRASS ROD ENDS</td>
<td>Shall consist of new, clean rod ends from free turning brass rods or forging rods, not to contain more than 0.30% tin and not more than 0.15% alloyed iron. To be free of Muntz metal and naval brass or any other alloys. To be in pieces not larger than 12” and free of foreign matter.</td>
</tr>
<tr>
<td>Nomad</td>
<td>YELLOW BRASS TURNINGS</td>
<td>Shall consist of yellow brass turnings, free of aluminum, manganese and composition turnings, not to contain over 3% of free iron, oil or other moisture; to be free of grindings and babbitts. To avoid dispute, to be sold subject to sample or analysis.</td>
</tr>
<tr>
<td>Ocean</td>
<td>MIXED UNSWEATED AUTO RADIATORS</td>
<td>Shall consist of mixed automobile radiators, to be free of aluminum radiators, and iron-finned radiators. All radiators to be subject to deduction of actual iron. The tonnage specification should cover the gross weight of the radiators, unless otherwise specified.</td>
</tr>
<tr>
<td>Pales</td>
<td>BRASS CONDENSER TUBES</td>
<td>Shall consist of clean condenser tubing which may be plated or unplated, free of excessive corroded material as mutually agreed. Upon mutual agreement between buyer and seller, may be in the form of whole bundles including iron and/or brass heads as well as iron and/or brass baffles.</td>
</tr>
<tr>
<td>Pallu</td>
<td>ALUMINUM BRASS CONDENSER TUBES</td>
<td>Shall consist of clean sound condenser tubing which may be plated or unplated, free of nickel alloy and corroded material.</td>
</tr>
<tr>
<td>Palms</td>
<td>MUNTZ METAL TUBES</td>
<td>Shall consist of clean sound Muntz metal tubing which may be plated or unplated, free of nickel alloy, aluminum alloy, and corroded material.</td>
</tr>

### ALUMINUM

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

| Tablet | CLEAN ALUMINUM LITHOGRAPHIC SHEETS | To consist of 1000 and/or 3000 series alloys, to be free of paper, plastic, excessively inked sheets, and any other contaminants. Minimum size of 3” (8 cm) in any direction. |
| Tabloid| NEW, CLEAN ALUMINUM LITHOGRAPHIC SHEETS | To consist of 1000 and/or 3000 series alloys, uncoated, unpainted, to be free of paper, plastic, ink, and any other contaminants. Minimum size of 3” (8 cm) in any direction. |
| Taboo  | MIXED LOW COPPER ALUMINUM CLIPPINGS AND SOLIDS | Shall consist of new, clean, uncoated and unplated low copper aluminum scrap of two or more alloys with a minimum thickness of 0.015 inches (.38 mm) and to be free of 2000 and 7000 series, hair wire, wire screen, punchings less 1/2 inch (1.25 cm) diameter, dirt, and other non-metallic items. Grease and oil not to total more than 1%. Variations to this specification should be agreed upon prior to shipment between the buyer and seller. |
| Taint/Tabor | CLEAN MIXED OLD ALLOY SHEET ALUMINUM | Shall consist of clean old alloy aluminum sheet of two or more alloys, free of foil, venetian blinds, castings, hair wire, screen wire, food or beverage containers, radiator shells, airplane sheet, bottle caps, plastic, dirt, and other non-metallic items. Oil and grease not to total more than 1%. Up to 10% Talc permitted. |
| Take   | NEW ALUMINUM CAN STOCK          | Shall consist of new low copper aluminum can stock and clippings, clean, lithographed or not lithographed, and coated with clear lacquer but free of lids with sealers, iron, dirt and other foreign contamination. Oil not to exceed 1%. |
| Talc   | POST-CONSUMER ALUMINUM CAN SCRAP | Shall consist of old aluminum food and/or beverage cans. The material is to be free of other scrap metals, foil, tin cans, plastic bottles, paper, glass, and other non-metallic items. Variations to this specification should be agreed upon prior to shipment between the buyer and seller. |
Taldon  BALED ALUMINUM USED BEVERAGE CAN (UBC) SCRAP
Shall have a minimum density of 14 pounds per cubic foot (225 kg/m³), and a maximum density of 17 pounds per cubic foot (273 kg/m³) for unflattened UBC and 22 pounds per cubic foot (353 kg/m³) for flattened UBC. Size: Minimum 30 cubic feet (.85 m³), with bale range dimensions of 24” to 40” (61 to 132 cm) by 30” to 52” (76 to 132 cm) by 40” to 84” (102 to 213 cm). The only acceptable tying method shall be as follows: four to six 5/8” (1.6 cm) x .020” (5 mm) steel bands, or six to ten #13 gauge steel wires (aluminum bands or wires are acceptable in equivalent strength and number). Use of skids and/or support sheets of any material is not acceptable. Must be magnetically separated material and free of steel, lead, bottle caps, plastic cans and other plastic, glass, wood, dirt, grease, trash, and other foreign substances. Any free lead is basis for rejection. Any and all aluminum items, other than used beverage cans, are not acceptable. Variations to this specification should be agreed upon prior to shipment between the seller and buyer.

Taldore  DENSIFIED ALUMINUM USED BEVERAGE CAN (UBC) SCRAP
Shall have a biscuit density of 35 to 50 pounds per cubic foot (562 to 802 kg/m³). Each biscuit not to exceed 60 pounds (27.2 kg). Nominal biscuit size range from 10” x 13” x 101/4” (25.4 x 33 x 26 cm) to 20” x 61/4” x 9” (50.8 x 15.9 x 22.9 cm). Shall have banding slots in both directions to facilitate bundle banding. All biscuits comprising a bundle must be of uniform size. Size: Bundle range dimensions acceptable are 41” to 44” x 51” (104 to 112 cm) to 54” x 54” (137 x 137 cm) to 56” (142 cm) high. The only acceptable tying method shall be as follows: Using minimum 5/8” (1.6 cm) wide by .020” (.05 cm) thick steel straps, the bundles are to be banded with one vertical band per row and a minimum of two firth (horizontal) bands per bundle. Use of skids and/or support sheets of any material is not acceptable. Must be magnetically separated material and free of steel, lead, bottle caps, plastic cans and other plastic, glass, wood, dirt, grease, trash, and other foreign substances. Any free lead is basis for rejection. Any and all aluminum items, other than used beverage cans, are not acceptable. Items not covered in the specifications, including moisture, and any variations to this specification should be agreed upon prior to shipment between the seller and buyer.

Taldon  CLEAN ALUMINUM PISTONS
Shall consist of clean, unalloyed aluminum pistons to be free from struts, bushings, shafts, iron rings and non-metallic items. Oil and grease not to exceed 2%.

Guidelines for Nonferrous Scrap
Tarry B  CLEAN ALUMINUM PISTONS WITH STRUTS
Shall consist of clean whole aluminum pistons with struts. Material is to be free from bushings, shafts, iron and non-metallic items. Oil and grease not to exceed 2%.

Tarry C  IRONY ALUMINUM PISTONS
Shall consist of aluminum pistons with non-aluminum attachments to be sold on a recovery basis or by special arrangement between buyer and seller.

Tassel  OLD MIXED ALUMINUM WIRE AND CABLE
Shall consist of old, unalloyed aluminum wire and cable which may contain up to 10% 6000 series wire and cable with not over 1% free oxide or dirt and free from hair wire, wire screen, iron, insulation and other non-metallic items.

Taste  OLD PURE ALUMINUM WIRE AND CABLE
Shall consist of old, unalloyed aluminum wire and cable containing not over 1% free oxide or dirt and free from hair wire, wire screen, iron, insulation and other non-metallic items.

Tata  NEW PRODUCTION ALUMINUM EXTRUSIONS
Shall consist of one alloy (typically 6063). Material may contain “butt ends” from the extrusion process but must be free of any foreign contamination. Anodized material is acceptable. Painted material or alloys other than 6063 must be agreed upon by buyer and seller.

Toto  ALUMINUM EXTRUSIONS “10/10”
Material to consist of new production and old/used 6063 extrusions that may contain up to (but not exceed) 10 percent painted extrusions and 10 percent 6061 alloy extrusions. Must not contain other alloys of aluminum. Material should be free of zinc corners, iron attachments, felt, plastic, paper, cardboard, thermo break, and dirt and other contaminants.

Tutu  ALUMINUM EXTRUSION DEALER GRADE
Shall consist of old extruded aluminum of one alloy, typically alloy 6063, 6061, or 7075. Material must be free of iron, thermo break, saw chips, zinc corners, dirt, paper, cardboard, and other foreign contamination. Percentages of paint or other alloys to be agreed upon by buyer and seller.

Teens  SEGREGATED ALUMINUM BORINGS AND TURNINGS
Shall consist of aluminum borings and turnings of one specified alloy. Material should be free of oxidation, dirt, free iron, stainless steel, magnesium, oil, flammable liquids, moisture and other non-metallic items. Fines should not exceed 3% through a 20 mesh (U.S. standard) screen.

Telic  MIXED ALUMINUM BORINGS AND TURNINGS
Shall consist of clean, uncorroded aluminum borings and turnings of two or more alloys and subject to deductions for fines in excess of 3% through a 20 mesh screen and dirt, free iron, oil, moisture and all other non-metallic items. Material containing iron in excess of 10% and/or free magnesium or stainless steel or containing highly flammable cutting compounds will not constitute good delivery. To avoid dispute, material should be sold on basis of definite maximum zinc, tin and magnesium content.

Tense  MIXED ALUMINUM CASTINGS
Shall consist of all clean aluminum castings which may contain auto and airplane castings but no ingots, and to be free of iron, brass, dirt and other non-metallic items. Oil and grease not to total more than 2%.

Tepid  AIRCRAFT SHEET ALUMINUM
Should be sold on recovery basis or by special arrangements with purchaser.

Terse  NEW ALUMINUM FOIL
Shall consist of clean, new, pure, uncoated 1000 and/or 3000 and/or 8000 series alloy aluminum foil, free from anodized foil, radar foil and chaff, paper, plastics, or any other non-metallic items. Hydraulically briquetted material and other alloys by agreement between buyer and seller.

Tesla  POST CONSUMER ALUMINUM FOIL
Shall consist of baled old household aluminum foil and formed foil containers of uncoated 1000, 3000 and 8000 series aluminum alloy. Material may be anodized and contain a maximum of 5% organic residue. Material must be free from radar chaff foil, chemically etched foil, laminated foils, iron, paper, plastic and other non-metallic contaminants.

Tetra  NEW COATED ALUMINUM FOIL
Shall consist of new aluminum foil coated or laminated with ink, lacquers, paper, or plastic. Material shall be clean, dry, free of loose plastic, PVC and other non-metallic items. This foil is sold on a metal content basis or by sample as agreed between buyer and seller.

Thigh  ALUMINUM GRINDINGS
Should be sold on recovery basis or by special arrangements with purchaser.

Thirl  ALUMINUM DROSSES, SPATTERS, SPILLINGS, SKIMMINGS AND SWEEPINGS
Should be sold on recovery basis or by special arrangements with purchaser.

Thorn  ALUMINUM BREAKAGE
Shall consist of aluminum with miscellaneous contaminants like iron, dirt, plastic and other types of contaminants. Material can either be sold based on aluminum recovery or content as agreed upon by buyer and seller. Must contain a minimum of 33% aluminum unless otherwise agreed upon by buyer and seller.
CODE ITEM
---
Throb SWEATED ALUMINUM
Shall consist of aluminum scrap which has been sweated or melted into a form or shape such as an ingot, sow or slab for convenience in shipping; to be free from corrosion, dross or any non-aluminum inclusions. Should be sold subject to sample or analysis.

Tooth SEGREGATED NEW ALUMINUM ALLOY CLIPPINGS AND SOLIDS
Shall consist of new, clean, uncoated and unpainted aluminum scrap of one specified aluminum alloy with a minimum thickness of .015” (.38 mm) and to be free of hair wire, wire screen, dirt and other non-metallic items. Oil and grease not to total more than 1%. Also free from punchings less than 1/2” (.127 cm) in size.

Tough MIXED NEW ALUMINUM ALLOY CLIPPINGS AND SOLIDS
Shall consist of two or more alloys with a minimum thickness of .015” (.38 mm) and to be free of hair wire, wire screen, dirt and other non-metallic items. Oil and grease not to total more than 1%. Also free from punchings less than 1/2” (.127 cm) in size.

Tread SEGREGATED NEW ALUMINUM CASTINGS, FORGINGS AND EXTRUSIONS
Shall consist of new, clean, uncoated and unpainted aluminum scrap of one specified alloy only and to be free from sawings, stainless steel, zinc, iron, dirt, oil, grease and other non-metallic items.

Troma Aluminum Auto or Truck Wheels
Shall consist of clean aluminum castings, forgings, and extrusions of one specified alloy only and to be free from iron, dirt, brass, bushings, and non-metallic items.

Trump ALUMINUM AUTO CASTINGS
Shall consist of all clean automobile aluminum castings of sufficient size to be readily identifiable to be free from iron, dirt, brass, bushings, and non-metallic items. Oil and grease not to total more than 2%.

Trill ACSR
Aluminum Conductor Steel Reinforced (ACSR) wire is a combination of steel and aluminum wire, of various configurations, with the expected aluminum recovery agreed upon by the buyer and the seller. Material to be free of other wires and cables unless mutually agreed upon.

Twang IAW
Insulated aluminum wire, which may or may not contain other wires or metal shielding, with the expected aluminum recovery agreed upon by the buyer and the seller. The material to be free of other wires and cables unless mutually agreed upon.

Twirl FRAGMENTIZER AIRCRAFT ALUMINUM SCRAP (2000 and 7000 series)
The material as received must be dry and not to contain more than 2% free zinc, 1% maximum free magnesium, and 1.5% maximum free iron and stainless with a maximum of 2% analytical iron. Not to contain more than a total 5% maximum of non-metals, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material. Any variations to be sold by special arrangement between buyer and seller.

Twist ALUMINUM AIRPLANE CASTINGS
Shall consist of clean aluminum castings from airplanes and to be free from iron, dirt, brass, bushings, and non-metallic items. Oil and grease not to total more than 2%.

Twitch FLOATED FRAGMENTIZER ALUMINUM SCRAP (from Automobile Shredders)
Derived from either mechanical or hand separation, the material must be dry and not contain more than 1% maximum free zinc, 1% maximum free magnesium, and 1% maximum of analytical iron. Not to contain more than a total 2% maximum of non-metals, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material, air bag canisters, or any sealed or pressurized items. Any variation to be sold by special arrangement between buyer and seller.

Tweak FRAGMENTIZER ALUMINUM SCRAP (from Automobile Shredders)
Derived from either mechanical or hand separation, the material must be dry and not contain more than 4% maximum free zinc, 1% maximum free magnesium, and 1.5% maximum of analytical iron. Not to contain more than a total 5% maximum of non-metals, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material, air bag canisters, or any sealed or pressurized items. Any variation to be sold by special arrangement between buyer and seller.

Twire BURNT FRAGMENTIZER ALUMINUM SCRAP (from Automobile Shredders)
Incinerated or burned material must be dry and not contain more than X% (% to be agreed upon by buyer and seller) ash from incineration, 4% maximum free zinc, 1% maximum free magnesium, and 1.5% maximum of analytical iron. Not to contain more than a total 5% maximum of non-metals, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material, air bag canisters, or any sealed pressurized items. Any variation to be sold by special arrangement between buyer and seller.
### ZINC

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

**Saves**  OLD ZINC DIE CAST SCRAP  
Shall consist of miscellaneous old zinc base die castings, with or without iron and other foreign attachments. Must be free of borings, turnings, dross pieces, chunks, melted pieces and skimmings. All unmeltables, dirt, foreign attachments, and volatile substances (such as rubber, cork, plastic, grease, etc.) are deductible. Material containing in excess of 30% iron will not constitute good delivery.

**Scabs**  NEW ZINC DIE CAST SCRAP  
Shall consist of new or unused, clean, zinc base die castings. Castings to be unplated, unainted, and free from corrosion.

**Scoot**  ZINC DIE CAST AUTOMOTIVE GRILLES  
Shall consist of clean, old or used zinc die cast automotive grilles, free from soldered material. All foreign attachments and extraneous materials are deductible.

**Scope**  NEW PLATED ZINC DIE CAST SCRAP  
Shall consist of new or unused clean, plated zinc base die castings, free from corrosion.

**Score**  OLD SCRAP ZINC  
Shall consist of clean dry scrap zinc, such as sheets, jar lids, clean unalloyed castings and anti-corrosion plates. Borings and turnings are not acceptable. Material must not be excessively corroded or oxidized. All foreign attachments and extraneous materials are deductible.

---

<table>
<thead>
<tr>
<th>CODE</th>
<th>ITEM</th>
</tr>
</thead>
</table>
| Zorba | SHREDDED NONFERROUS SCRAP (predominantly aluminum)  
Shall be made up of a combination of the nonferrous metals: aluminum, copper, lead, magnesium, stainless steel, nickel, tin, and zinc, in elemental or alloyed (solid) form. The percentage of each metal within the nonferrous concentrate shall be subject to agreement between buyer and seller. Material generated by eddy current, air separation, flotation, screening, other segregation technique(s), or a combination thereof. Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zorba” with a number to follow indicating the estimated percentage nonferrous metal content of the material (e.g., “Zorba 90” means the material contains approximately 90% nonferrous metal content). May also be screened to permit description by specific size ranges. (Refer also to Zorba under Mixed Metals.) |

| Screen | NEW ZINC CLIPPINGS  
Shall consist of any new pure zinc sheets or stampings free from corrosion. To contain no foreign material or attachments. Printers zinc, such as engravers zinc, lithograph sheets and addressograph plates subject to special arrangements. Printers zinc to be free of routings. |

| Scribe | CRUSHED CLEAN SORTED FRAGMENTIZERS DIE CAST SCRAP, AS PRODUCED FROM AUTOMOBILE FRAGMENTIZERS  
To be clean, free of dirt, oil, glass, rubber, and trash. To contain a maximum of 5% unmeltables such as free iron, copper, aluminum and other metals. |

| Scroll | UNSORTED ZINC DIE CAST SCRAP  
Produced from automobile fragmentizers. Material to contain about 55% zinc-bearing scrap. Other nonferrous metals such as aluminum, stainless steel, red metal, etc., to be about 40%. Insulated copper wire about 1%. Trash, dirt, glass, rubber, oil, iron, not to exceed 5%. Any variations to be sold by special arrangement between buyer and seller. |

| Scrub | HOT DIP GALVANIZERS SLAB ZINC DROSS (Batch Process)  
Shall consist only of galvanizers unsweated zinc dross in slab form from hot dip galvanizing (Batch Process) with a minimum zinc content of 92% and shall be free of skimmings and tramp iron. Broken pieces under 2” in diameter shall not exceed 10% of the weight of each shipment. Slabs shall not weigh over 100 pounds each. Heavier pieces acceptable upon mutual agreement between buyer and seller. Material from continuous galvanizing operation is not acceptable. Blocks are acceptable upon mutual agreement. |

| Scull | ZINC DIE CAST SLABS OR PIGS  
Shall consist of melted zinc base die cast materials, in smooth clean solid slabs or pigs. Material to be free from drosses and to contain a minimum zinc content of 90%. To contain a maximum of 0.1% nickel and maximum of 1% lead. Blocks are acceptable upon mutual agreement. |

| Seal | CONTINUOUS LINE GALVANIZING SLAB ZINC TOP DROSS  
Shall consist of unsweated zinc dross removed from the top of a continuous line galvanizing bath, in slab form not weighing in excess of 100 pounds each, with a minimum zinc content of 90%. Heavier pieces acceptable upon mutual agreement between buyer and seller. Shall be free of skimmings. Broken pieces under 2” in diameter shall not exceed 10% of the weight of each shipment. |

| Seam | CONTINUOUS LINE GALVANIZING SLAB ZINC BOTTOM DROSS  
Shall consist of unsweated zinc dross removed from the bottom of a continuous line galvanizing bath, in slab form not weighing in excess of 100 pounds each, with a minimum zinc content of 92%. Heavier pieces acceptable upon mutual agreement between buyer and seller. Shall be free of skimmings. Broken pieces under 2” in diameter shall not exceed 10% of the weight of each shipment. |
Shelf  PRIME ZINC DIE CAST DROSS Shall consist of metal skimmed from the top of pot of molten zinc die cast metal. Must be unsweated, unfluxed, shiny, smooth, metallic and free from corrosion or oxidation. Should be poured in molds or in small mounds weighing not over 75 pounds each.

**MAGNESIUM**

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

**Wafer**  MAGNESIUM CLIPS Shall consist of clean magnesium clips in crucible size, free of copper, aluminum, and zinc flashings and excessive oil and grease. To be free of all foreign attachments.

**Walnut**  MAGNESIUM SCRAP Shall consist of magnesium castings, magnesium engine blocks and transmission casings, bomber and car wheels, extrusions, and sheet. Material to be free from brass and copper inserts and all foreign attachments. To be free of anodes, hollow castings and explosives. Percentages of and penalties for dirt, oil, grease, and iron to be subject to agreement between buyer and seller. Excessively large pieces to be negotiated between buyer and seller.

**Wine**  MAGNESIUM ENGRAVER PLATES To be free of copper, aluminum, zinc, and electrolyte plates. To be clean and free of all foreign attachments. Magnesium plates shipped loose by agreement between buyer and seller.

**Wood**  MAGNESIUM DOCKBOARDS Shall consist of clean magnesium dockboard cut or broken to size agreed upon by buyer and seller. To be free of all foreign attachments.

**World**  MAGNESIUM TURNINGS It is recommended that these materials be sold by special arrangement between buyer and seller.

**LEAD**

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

**Racks**  SCRAP LEAD—SOFT Shall consist of clean soft scrap lead, free of other materials such as drosses, battery plates, lead covered cable, hard lead, collapsible tubes, foil, type metals, aluminum, zinc, iron and brass fittings, dirty chemical lead and radioactive materials. Review packaging specifications and regulatory status pertaining to shipping with buyer prior to sale.
### Guidelines for Nonferrous Scrap

**CODE ITEM**

**Daunt** CUPRO NICKEL SOLIDS
Consisting of plates enclosed by some form of complete plastic case. Partial, cracked or broken cells, cells without caps and the amount of liquid content and any variations to the specification subject to special agreement. Review packaging specifications and regulatory status pertaining to shipping with buyer prior to sale.

**Roper** SCRAP WHOLE INTACT INDUSTRIAL LEAD BATTERIES
Consisting of bus, diesel, locomotive, telephone and/or steel cased batteries. Submarine batteries subject to negotiation. Partial, cracked, broken batteries or batteries without caps and the amount of liquid content and any variations to the specification subject to special agreement. Review packaging specifications and regulatory status pertaining to shipping with buyer prior to sale.

**Ropes** WHEEL WEIGHTS
To consist of lead tire balances with or without iron clips. Not to include scrap lead, lugs or plates unless specifically agreed to. To be free of foreign material. Review packaging specifications and regulatory status pertaining to shipping with buyer prior to sale.

**NICKEL/STAINLESS/HI TEMP**

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

**Aroma** NEW NICKEL SCRAP
Shall consist of clean new sheet, plate, bar, tube, and any other wrought nickel scrap solids. Nickel minimum 99%; Cobalt maximum 0.25%; Copper maximum 0.50%. Free of castings, as well as any foreign attachments or other contamination.

**Burly** OLD NICKEL SCRAP
Shall consist of old and/or new sheet, plate, bar, tube, and any other wrought nickel scrap solids. Material to contain a minimum of 98% nickel; Copper maximum 0.50%. This grade to be free of castings, soldered, brazed, sweated, or painted material, other metallic coating, foreign attachments, or any other contamination.

**Dandy** NEW CUPRO NICKEL CLIPS AND SOLIDS
Shall consist of clean, new, segregated (normally accepted analysis grades) either 70/30, 80/20, or 90/10 cupro nickel tube, pipe, sheet, plate, or other wrought solid forms. Must be free of foreign attachments or any other contamination.

**Danta** CUPRO NICKEL SOLIDS
Shall consist of old, and/or new, segregated (normally accepted analysis grades) either 70/30, 80/20, 90/10 cupro nickel tube, pipe, sheet, plate, or other wrought solid forms. Maximum 2% sediment allowable. Any other forms of cupro nickel solids such as castings, gates, risers, spills, etc., packaged separately, may or may not be included, only upon agreement between buyer and seller. Must be free of foreign attachments and all other contamination.

**Decoy** CURPO NICKEL SPINNINGS, TURNINGS, BORINGS
Shall consist of clean, segregated (normally accepted analysis grades) either 70/30, 80/20, 90/10 cupro nickel spinings, turnings, or borings. Particulars concerning physical description, analysis, and packaging, to be agreed upon between buyer and seller.

**Delta** SOLDERED CUPRO NICKEL SOLIDS
Shall consist of segregated (normally accepted analysis grades) either 70/30, 80/20, 90/10 cupro nickel solids, soldered, brazed, or sweated material. Must be free of trimmed seams and edges and all other contamination.

**Depth** MISCELLANEOUS NICKEL-COPPER AND NICKEL-COPPER IRON
Shall consist of miscellaneous scrap in which the basic elements, by weight, are nickel and copper, such as copper nickel peelings, plating racks, and hangers, and all nickel and copper in attached or combined form. In all cases, miscellaneous nickel copper scrap should be sold by description and analysis.

**Hitch** NEW R-MONEL CLIPPINGS AND SOLIDS
Shall consist of clean, new, R-Monel sheet, plate, bar, rod, tube, pipe, or any other wrought scrap. Must be free of any foreign attachments or all other contamination.

**House** NEW MIXED MONEL SOLIDS AND CLIPPINGS
Shall consist of new, clean R and K-Monel solids and clippings. Free of cast material, foreign attachments and all other contamination.

**Ideal** OLD MONEL SHEET AND SOLIDS
Shall consist of clean R and K-Monel solids such as sheet, plate, pipe, rods, forgings, screen and wire cloth. Must be free of soldered, brazed, welded, or sweated material, cast material, foreign attachments, and all other contamination.

**Indian** K-MONEL SOLIDS
Shall consist of clean K-Monel solids.

**Junto** SOLDERED MONEL SHEET AND SOLIDS
Shall consist of soldered and/or brazed miscellaneous grades of Monel alloys in either wrought or cast form. Must be free of trimmed seams and edges, non-metallic filling, foreign attachments, and all other contamination. Particulars concerning physical description, assay, and packaging to be agreed upon between buyer and seller.

**Lemon** MONEL CASTINGS
Shall consist of various types of clean Monel castings, assaying minimum 60% nickel. Must be free of foreign attachments or any other contamination.

**Lemur** MONEL TURNINGS
Shall consist of mixed Monel turnings and borings containing a minimum of 60% nickel content, on a dry basis.
Pekoe 200 SERIES STAINLESS STEEL SCRAP SOLIDS
Shall consist of all types of clean AISI Series Stainless Steel Scrap Solids, which contain a maximum of .5% copper, free of foreign attachments and other contamination.

Sabot STAINLESS STEEL SCRAP
Shall consist of clean 18-8 type stainless steel clips and solids containing a minimum 7% nickel, 16% chrome, and have a maximum of .50% molybdenum, .50% copper, .045% phosphorous, and .03% sulfur, and otherwise free of harmful contaminants. Particulars concerning physical description, grading, additional analysis, and preparation to be agreed upon between buyer and seller.

Ultra STAINLESS STEEL TURNINGS
Shall consist of clean 18-8 type stainless steel turnings containing a minimum 7% nickel and 16% chrome, and to be free of nonferrous metals, nonmetals, excessive iron, oil and other contaminants. Particulars concerning physical description, assay, and packaging to be agreed upon between buyer and seller.

Vaunt EDISON BATTERIES
Nickel-iron batteries to be sold free of crates, copper terminal connectors, and excess liquid. Must be free of nickel cadmium batteries.

Zurik SHREDDED NONFERROUS SENSOR SORTED SCRAP (predominantly stainless steel)
Shall be made up of a combination of the nonferrous metals: stainless steel, insulated copper wire, aluminum, copper, lead, magnesium, nickel, tin, and zinc, in elemental or alloyed (solid) form. The percentage of each metal within the nonferrous concentrate shall be subject to agreement between buyer and seller. Material generated by computer sensing equipment (e.g., induction sensor sorting or X-ray) technique(s). Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zurik” with a number to follow indicating the estimated percentage nonferrous content of the material (e.g., “Zurik 90” means the material contains approximately 90% nonferrous metal content). May also be screened to permit description by specific size ranges. (Refer also to Zurik under Mixed Metals.)

Vader SEALED UNITS
Shall consist of whole steel-cased compressors originating from condensers from air conditioner units, freezers, refrigerators or the like, containing a motor inside. Free of hazardous materials, including chlorofluorocarbons (CFCs) or other refrigerants and polychlorinated biphenyls (PCBs). No loose iron or extra iron attachments such as framework permitted.

Elmo MIXED ELECTRIC MOTORS
Shall consist of whole electric motors and/or dismantled electric motor parts that are primarily copper-wound. May contain some aluminum-wound material, subject to agreement between buyer and seller. No excessive steel attachments such as gear reducers, iron bases, and pumps, or loose free iron allowed. Specification not to include sealed units or cast iron compressors.

Small Elmo ELECTRIC MOTORS
Shall be sized to approximately basketball size or smaller and shall consist of whole electric motors and/or dismantled electric motor parts that are primarily copper-wound. May contain some aluminum-wound material, subject to agreement between buyer and seller. No excessive steel attachments such as gear reducers, iron bases, and pumps, or loose free iron allowed. Specification not to include sealed units or cast iron compressors.

Sheema SHREDDED ELECTRIC MOTORS (also called “shredder pickings” or “meatballs”)
Shall consist of mixed copper and aluminum bearing material from ferrous shredding, comprised of motors without cases. May contain insulated copper harness wire, subject to agreement between buyer and seller. Trace percentages of other contaminants and fines may be present. No free iron or sealed units.

Sheelmo SHREDDED ELECTRIC MOTORS (also called “shredder pickings” or “meatballs”)
Shall consist of mixed copper-bearing material from ferrous shredding, comprised of motors without cases. May contain up to 10 percent aluminum-wound material and may contain insulated copper harness wire, subject to agreement between buyer and seller. Trace percentages of other contaminants and fines may be present. No free iron or sealed units.

Zebra (High Density)
Shall consist of high-density nonferrous metals produced by media separation technology containing brass, copper, zinc, nonmagnetic stainless steel, and copper wire. Material to be dry and free from excess oxidation. The percentage and types of metals other than these, as well as the percentage and types of nonmetallic contamination, are to be agreed upon between the buyer and seller.

Zeppelin (Light Density)
Shall consist of light-density nonferrous metals produced by media separation technology and contain thin-gauge aluminum and magnesium. Material to be dry and free from excess oxidation. The percentage and types of metals other than aluminum and
magnesium, as well as the percentage and types of nonmetallic contamination, are to be agreed upon between the buyer and seller.

**Zeyda SHREDDED INSULATED COPPER WIRE**

Shall consist predominantly of recovered ICW (Insulated Copper Wire) that has been derived by either mechanical or physical separation. This material is likely to have other metals, in small percentages (should be less than 5%) that were not successfully separated. The percentage of each metal within the overall product shall be subject to agreement between buyer and seller. Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zeyda” with two numbers to follow, indicating the estimated percentage recoverable copper wire and the second indicating the maximum amount of other metals or contaminants expected. (e.g., “Zeyda 45/3” means the material contains approximately 45% copper and up to 3% other material). May also be screened to permit description by specific size ranges.

**Zorba SHREDDED NONFERROUS SCRAP (predominantly aluminum)**

Shall be made up of a combination of the nonferrous metals: aluminum, copper, lead, magnesium, stainless steel, nickel, tin, and zinc, in elemental or alloyed (solid) form. The percentage of each metal within the nonferrous concentrate shall be subject to agreement between buyer and seller. Material generated by eddy current, air separation, flotation, screening, other segregation technique(s), or a combination thereof. Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zorba” with a number to follow indicating the estimated percentage recoverable copper wire and the second indicating the maximum amount of other metals or contaminants expected. (Refer also to Zorba under Aluminum.)

**Zurik SHREDDED NONFERROUS SENSOR SORTED SCRAP (predominantly stainless steel)**

Shall be made up of a combination of the nonferrous metals: stainless steel, insulated copper wire, aluminum, copper, lead, magnesium, nickel, tin, and zinc, in elemental or alloyed (solid) form. The percentage of each metal within the nonferrous concentrate shall be subject to agreement between buyer and seller. Material generated by computer sensing equipment (e.g., induction sensor sorting or X-ray) technique(s). Shall have passed one or more magnets to reduce or eliminate free iron and/or large iron attachments. Shall be free of radioactive material, dross, or ash. Material to be bought/sold under this guideline shall be identified as “Zurik” with a number to follow indicating the estimated percentage nonferrous content of the material (e.g., “Zurik 90” means the material contains approximately 90% nonferrous metal content). May also be screened to permit description by specific size ranges. (Refer also to Zurik under Nickel/Stainless/Hi Temp.)

### OTHER

**HEAVIER PIECES OF ANY SIZE, LENGTH, AND WEIGHT ACCEPTABLE UPON MUTUAL AGREEMENT BETWEEN BUYER AND SELLER.**

**Ranch BLOCK TIN**

Block tin must assay minimum of 98% tin, and to be free of liquids, solder, and brass connections, pewter, pumps, pot pieces, and dirt.

**Ranks PEWTER**

Shall consist of tableware and soda-fountain boxes but should contain a minimum of 84% tin. Siphon tops to be accounted for separately. Material must be free of brass, zinc, and other foreign metals.

**Raves HIGH TIN BASE BABBITT**

Shall contain a minimum of 78% tin and be free of brassy or zingly metals.

**Roses MIXED COMMON BABBITT**

Shall consist of lead base bearing metal containing not less than 8% tin, free from Alens metal, ornamental, antimonial and type metal. Must be free from all zinc and excessive copper in the alloy.

### Identification Checklist for Precious Metals

This Identification Check List for Precious Metals sets up a general basis for identifying types and grades of precious metals scrap by the scrap processor who will be familiar both to the precious metals refiner and to the plants generating precious metals scrap.

By checking this identification list, the scrap processor gives the refiner a fairly accurate conception of the material the processor has on hand and offers a basis for the refiner to quote an estimated price for the material.

Due to the high values and the constantly changing character of precious metal scrap, it is often the practice in the industry to require a sample to be submitted before giving refining schedules.

### I. Scrap Sources

**REFINED SILVER METAL — 99.9 MIN. PERCENT**

Silver-bearing materials:
- Anodes
- Assemblies—Electrical
- Batteries
  - Silver/Copper Plated
  - Silver/Cadmium
  - Silver/Zinc Silver/Magnesium
- Blanking Scrap—Punchings
- Brazing Alloys
- Brushes—Electric Motors

Guidelines for Ferrous Scrap: FS-2017

General Information

a. **Cleanliness.** All grades shall be free of dirt, nonferrous metals, or foreign material of any kind, and excessive rust and corrosion. However, the terms “free of dirt, nonferrous metals, or foreign material of any kind” are not intended to preclude the accidental inclusion of negligible amounts where it can be shown that this amount is unavoidable in the customary preparation and handling of the particular grade involved.

b. **Off-grade material.** The inclusion in a shipment of a particular grade of iron and steel scrap of a negligible amount of metallic material which exceeds to a minor extent the applicable size limitations, or which fails to a minor extent to meet the applicable requirements as to quality or kind of material, shall not change the classification of the shipment, provided it can be shown that the inclusion of such off-grade material is unavoidable in the customary preparation and handling of the grade involved.

c. **Residual alloys.** Wherever the term “free of alloys” is used in the classifications given herein, it shall mean that any alloys contained in the steel are residual and have not been added for the purpose of making an alloy steel. Steel scraps shall be considered free of alloys when the residual alloying elements do not exceed the following percentages:

<table>
<thead>
<tr>
<th>Element</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nickel</td>
<td>.45%</td>
</tr>
<tr>
<td>Molybdenum</td>
<td>.10%</td>
</tr>
<tr>
<td>Chromium</td>
<td>.20%</td>
</tr>
<tr>
<td>Manganese</td>
<td>1.65%</td>
</tr>
</tbody>
</table>

The combined residuals other than manganese shall not exceed a total of 0.60 percent.

d. **Deviations.** Any deviations from the general classifications of iron and steel scrap may be consummated by mutual agreement between buyer and seller.

200 **No. 1 heavy melting steel.** Wrought iron and/or steel scrap 1/4 inch and over in thickness. Individual pieces not over 60 x 24 inches (charging box size) prepared in a manner to insure compact charging.

201 **No. 1 heavy melting steel 3 feet x 18 inches.** Wrought iron and/or steel scrap 1/4 inch and over in thickness. Individual pieces not over 36 x 18 inches (charging box size) prepared in a manner to insure compact charging.

202 **No. 1 heavy melting steel 5 feet x 18 inches.** Wrought iron and/or steel scrap 1/4 inch and over in thickness. Individual pieces not over 60 x 18 inches (charging box size) prepared in a manner to insure compact charging.

203 **No. 2 heavy melting steel.*** Wrought iron and steel scrap, black and galvanized, 1/8 inch and over in thickness, charging box size to include material not suitable as No. 1 heavy melting steel. Prepared in a manner to insure compact charging.

204 **No. 2 heavy melting steel.*** Wrought iron and steel scrap, black and galvanized, maximum size 36 x 18 inches. May include all automobile scrap properly prepared.

205 **No. 2 heavy melting steel 3 feet x 18 inches.** Wrought iron and steel scrap, black and galvanized, maximum size 36 x 18 inches. May include automobile scrap, properly prepared; however, to be free of sheet iron or thin gauged material.

206 **No. 2 heavy melting steel 5 feet x 18 inches.** Wrought iron and steel scrap, black and galvanized, maximum size 60 x 18 inches. May include automobile scrap, properly prepared; however, to be free of sheet iron or thin gauged material.

207 **No. 1 busheling.** Clean steel scrap, maximum size 2 feet by 5 feet, including new factory busheling (for example, sheet clippings, stampings, etc.). May not include old auto body and fender stock. Free of metal coated, limed, vitreous enameled, and electrical sheet containing over 0.5 percent silicon.

207A **New black sheet clippings.** For direct charging, maximum size 8 feet by 18 inches, free of old automobile body and fender stock, metal coated, lined, vitreous enameled and electrical sheet containing over 0.5 percent silicon. Must lay reasonably flat in car.

208 **No. 1 bundles.** New black steel sheet scrap, clippings or skeleton scrap, compressed or hand bundled, to charging box size, and weighing not less than 75 pounds per cubic foot. (Hand bundles are tightly secured for handling with a magnet.) May include Stanley balls or mandrel wound bundles or skeleton reels, tightly secured. May include chemically detinned material. May not include old auto body or fender stock. Free of metal coated, limed, vitreous enameled, and electrical sheet containing over 0.5 percent silicon.

209 **No. 2 bundles.** Old black and galvanized steel sheet scrap, hydraulically compressed to charging box size and weighing not less than 75 pounds per cubic foot. May not include tin or lead-coated material or vitreous enameled material.

210 **Shredded scrap.** Homogeneous iron and steel scrap, magnetically separated, originating from automobiles, unprepared No. 1 and No. 2 steel, miscellaneous baling and sheet scrap. Average density 50 pounds per cubic foot.

211 **Shredded scrap.** Homogeneous iron and steel scrap magnetically separated, originating from automobiles, unprepared No. 1 and No. 2 steel, miscellaneous baling and sheet scrap. Average density 70 pounds per cubic foot.
<table>
<thead>
<tr>
<th>CODE</th>
<th>ITEM</th>
</tr>
</thead>
</table>
| 212  | Shredded clippings.  
Shredded 1000 series carbon steel clippings or sheets. Material should have an average density of 60 pounds per cubic foot. |
| 213  | Steel can bundles.  
Steel can scrap compressed to charging box size and weighing not less than 75 pounds per cubic foot. Cans may be baled without removal of paper labels, but free of other non-metallics. May include up to 5 gallon tin coated containers. |
| 214  | No. 3 bundles.  
Old sheet steel, compressed to charging box size and weighing not less than 75 pounds per cubic foot. May include all coated ferrous scrap not suitable for inclusion in No. 2 bundles. |
| 215  | Incinerator bundles.  
Tin can scrap, compressed to charging box size and weighing not less than 75 pounds per cubic foot. Processed through a recognized garbage incinerator. |
| 216  | Terne plate bundles.  
New terne plate sheet scrap, clippings or skeleton scrap, compressed or hand bundled, to charging box size, and weighing not less than 75 pounds per cubic foot. (Hand bundles are tightly secured for handling with a magnet.) May include Stanley balls or mandrel wound bundles or skeleton reels, tightly secured. |
| 217  | Bundled No. 1 steel.  
Wrought iron and/or steel scrap 1/8 inch or over in thickness, compressed to charging box size and weighing not less than 75 pounds per cubic foot. Free of all metal-coated material. |
| 218  | Bundled No. 2 steel.  
Wrought iron or steel scrap, black or galvanized, 1/8 inch and over in thickness, compressed to charging box size and weighing not less than 75 pounds per cubic foot. Auto body and fender stock, burnt or hand stripped, may constitute a maximum of 60 percent by weight. (This percent based on makeup of auto body, chassis, driveshafts, and bumpers.) Free of all coated material, except as found on automobiles. |
| 219  | Machine shop turnings.  
Clean steel or wrought iron turnings, free of iron borings, nonferrous metals in a free state, scale, or excessive oil. May not include badly rusted or corroded stock. |
| 220  | Machine shop turnings and iron borings.  
Same as machine shop turnings but including iron borings. |
| 221  | Shoveling turnings.  
Clean short steel or wrought iron turnings, drillings, or screw cuttings. May include any such material whether resulting from crushing, raking, or other processes. Free of springy, bushy, tangled or matted material, lumps, iron borings, nonferrous metals in a free state, grindings, or excessive oil. |
| 222  | Shoveling turnings and iron borings.  
Same as shoveling turnings, but including iron borings. |
| 223  | Iron borings.  
Clean cast iron or malleable iron borings and drillings, free of steel turnings, scale, lumps or excessive oil. |
| 224  | Auto slabs.  
Clean automobile slabs, cut 3 feet x 18 inches and under. |
| 225  | Auto slabs.  
Clean automobile slabs, cut 2 feet x 18 inches and under. |
| 226  | Briquetted iron borings.  
Analysis and density to consumer’s specifications. |
| 227  | Briquetted steel turnings.  
Analysis and density to consumer’s specifications. |
| 228  | Mill scale.  
Dark colored, ranging from blue to black, ferromagnetic iron oxide forming on the surface of steel articles during heating and working. |

*The identical designations given for these two classifications are in accordance with established industry practices in specifying the materials desired.

## Electric Furnace Casting and Foundry Grades

<table>
<thead>
<tr>
<th>CODE</th>
<th>ITEM</th>
</tr>
</thead>
</table>
| 229  | Billet, bloom and forge crops.  
Billet, bloom, axles, slabs, heavy plate and heavy forge crops, containing not over 0.05 percent phosphorus or sulphur and not over 0.5 percent silicon, free from alloys. Dimensions not less than 2 inches in thickness, not over 18 inches in width, and not over 36 inches in length. |
| 230  | Bar crops and plate scrap.  
Bar crops, plate scrap, forgings, bits, jars, and tool joints, containing not over 0.05 percent phosphorus or sulphur, not over 0.5 percent silicon, free from alloys. Dimensions not less than 1/2 inch in thickness, not over 18 inches in width, and not over 36 inches in length. |
| 231  | Plate and structural steel, 5 feet and under.  
Cut structural and plate scrap, 5 feet and under. Clean open hearth steel plates, structural shapes, crop ends, shearings, or broken steel tires. Dimensions not less than 1/4 inch thickness, not over 5 feet in length and 18 inches in width. Phosphorus or sulphur not over 0.05 percent. |
| 232  | Plate and structural steel, 5 feet and under.  
Cut structural and plate scrap, 5 feet and under. Clean open hearth steel plates, structural shapes, crop ends, shearing, or broken steel tires. Dimensions not less than 1/4 inch thickness, not over 5 feet in length and 24 inches in width. Phosphorus or sulphur not over 0.05 percent. |
| 233  | Cast steel.  
Steel castings not over 48 inches long or 18 inches wide, and 1/4 inch and over in thickness, containing
not over 0.05 percent phosphorus or sulphur, free from alloys and attachments. May include heads, gates, and risers.

234 Punchings and plate scrap.
Punchings or stampings, plate scrap, and bar crops containing not over 0.05 percent phosphorus or sulphur and not over 0.5 percent silicon, free from alloys. All materials cut 12 inches and under, and with the exception of punchings or stampings, at least 1/8 inch in thickness. Punchings or stampings under 6 inches in diameter may be any gauge.

235 Electric furnace bundles.
New black steel sheet scrap hydraulically compressed into bundles of size and weight as specified by consumer.

236 Cut structural and plate scrap, 3 feet and under.
Clean open hearth steel plates, structural shapes, crop ends, shearings, or broken steel tires. Dimensions not less than 1/4 inch in thickness, not over 3 feet in length and 18 inches in width. Phosphorus or sulphur not over 0.05 percent.

237 Cut structural and plate scrap, 2 feet and under.
Same as cut structural and plate scrap, 3 feet and under, except for length.

238 Cut structural and plate scrap, 1 foot and under.
Same as cut structural and plate scrap, 3 feet and under, except for length.

239 Silicon busheling.
Clean silicon bearing steel scrap, not exceeding 12 inches in any dimension, including new factory busheling (for example, sheet clippings, stampings, etc.), having a silicon content of 0.05 percent to 5.0 percent.

240 Silicon Clippings.
Clean steel scrap, including new factory busheling (for example, sheet clippings, stampings, etc.), may not include old auto body and fender stock. Free of metal coated, limed, vitreous enameled, and electrical sheet containing minimum 1 percent silicon.

241 Chargeable ingots and ingot butts.
Chargeable ingots and ingot butts for material to be suitable and acceptable to the consumer containing not over 0.05 percent phosphorus or sulphur and not over 0.05 percent silicon free of alloys.

242 Foundry steel, 2 feet and under.
Steel scrap 1/8 inch and over in thickness, not over 2 feet in length or 18 inches in width. Individual pieces free from attachments. May not include nonferrous metals, cast or malleable iron, cable, vitreous enameled, or metal coated material.

243 Foundry steel, 1 foot and under.
Same specifications as 2-foot material, except for length.

243A Low residual, black foundry busheling.
1000 series black carbon steel scrap, 1/8 inch and over in thickness, not more than 12 inch x 24 inch, manganese content not more than 0.50 percent. Other parameters subject to agreement between supplier and consumer.

243B Low residual, ductile quality shredded clips.
Shredded black 1000 series carbon steel scrap, 1/8 inch and over in thickness, minimum average density of 75 PCF, manganese content not more than 0.50 percent. Other parameters subject to agreement between supplier and consumer.

244 Springs and crankshafts.
Clean automotive springs and crankshafts, either new or used.

245 Alloy free turnings.
Clean shoveling steel turnings free from lumps, tangled or matted material, iron borings, or excessive oil containing not more than 0.05 percent phosphorus or sulphur, and free of alloys.

246 Alloy free short shoveling steel turnings.
Clean shoveling steel turnings, free of lumps, tangled or matted material, iron borings, or excessive oil, containing not more than 0.05 percent phosphorus or sulphur, and free of alloys.

247 Alloy free machine shop turnings.
Clean steel turnings, free of iron borings or excessive oil, containing not more than 0.05 percent phosphorus or sulphur, and free of alloys. May not include badly rusted or corroded stock.

248 Hard steel cut 30 inches and under.
Automotive steel consisting of rear ends, crankshafts, driveshafts, front axles, springs, and gears prepared 30 inches and under. May not include miscellaneous small shoveling steel or any pieces too bulky for gray iron foundry use.

249 Chargeable slab crops.
Chargeable slab crops for material to be suitable and acceptable to the consumer containing not over 0.05 percent phosphorus and 0.05 percent sulphur and not over 0.05 percent silicon and free of alloys.

250 Silicon bundles.
Silicon sheet scrap, clippings or skeleton scrap, compressed or hand bundled, to charging box size, and weighing not less than 75 pounds per cubic foot, having a silicon content of 0.50 percent to 5.0 percent.

251 Heavy turnings.
Short, heavy steel turnings, containing not over 0.05 percent phosphorus or sulphur and free of alloys. May include rail chips. May not include machine shop or other light turnings and must weigh not less than 75 pounds per cubic foot in the original state of production.
Specially Processed Grades to Meet Consumer Requirements

Grades of scrap prepared especially to meet with steel mill or foundry requirements, individual specifications to be agreed on between consumer and supplier.

Cast Iron Grades

252 Cupola cast.
Clean cast iron scrap such as columns, pipes, plates, and castings of a miscellaneous nature, including automobile blocks and cast iron parts of agricultural and other machinery. Free from stove plate, burnt iron, brake shoes or foreign material. Cupola size, not over 24 inches x 30 inches, and no piece over 150 pounds in weight.

253 Charging box cast.
Clean cast iron scrap in sizes not over 60 inches in length or 30 inches in width, suitable for charging into an open hearth furnace without further preparation. Free from burnt iron, brake shoes, or stove plate.

254 Heavy breakable cast.
Cast iron scrap over charging box size or weighing more than 500 pounds. May include cylinders and driving wheel centers. May include steel which does not exceed 10 percent of the casting by weight.

255 Hammer block or bases.
Cast iron hammer blocks or bases.

256 Burnt iron.
Burnt cast iron scrap, such as stove parts, grate bars, and miscellaneous burnt iron. May include sash weights or window weights.

257 Mixed cast.
May include all grades of cast iron except burnt iron. Dimensions not over 24 inches x 30 inches and no piece over 150 pounds in weight.

258 Stove plate, clean cast iron stove.
Free from malleable and steel parts, window weights, plow points, or burnt cast iron.

259 Clean auto cast.
Clean auto blocks; free of all steel parts except camshafts, valves, valve springs, and studs. Free of non-ferrous and non-metallic parts.

260 Unstripped motor blocks.
Automobile or truck motors from which steel and nonferrous fittings may or may not have been removed. Free from driveshafts and all parts of frames.

261 Drop broken machinery cast.
Clean heavy cast iron machinery scrap that has been broken under a drop. All pieces must be of cupola size, not over 24 inches x 30 inches, and no piece over 150 pounds in weight.

262 Clean auto cast, broken, not degreased.
Clean auto blocks, free of all steel parts except camshafts, valves, valve springs and studs. Free of non-ferrous and non-metallic parts, and must be broken to cupola size, 150 pounds or less.

263 Clean auto cast, degreased.
Free of all steel parts except camshafts, valves, valve springs, and studs. Free of nonferrous and non-metallic parts, and must be broken into cupola size, 150 pounds or less.

264 Malleable.
Malleable parts of automobiles, railroad cars, locomotives, or miscellaneous malleable iron castings. Free from cast iron and steel parts and other foreign material.

265 Broken ingot molds and stools.
Broken ingot molds and stools, cast iron, maximum size 2 feet x 3 feet x 5 feet.

266 Unbroken ingot molds and stools.
Unbroken ingot molds and stools, cast iron.

Special Boring Grades

267 No. 1 chemical borings.
New clean cast or malleable iron borings and drillings containing not more than 1 percent oil, free from steel turnings, or chips, lumps, scale, corroded or rusty material.

268 Briquetted cast iron borings, hot process.
Cast iron borings, heated, briquetted, to a density of approximately 85 percent, oil and water content under 1 percent.

269 Briquetted cast iron borings, cold process.
Cast iron boring briquettes, free of steel and nonferrous material, hydraulically compressed into a cohesive solid, reasonably free of oil, and having a density of not less than 60 percent.

270 Malleable borings.
Clean malleable iron borings and drillings, free of steel turnings, scale and excessive oil.

271 No. 2 chemical borings.
New clean cast or malleable iron borings and drillings, containing not more than 1.5 percent oil, free from steel turnings, or chips, lumps, scale, corroded or rusty material.

Steel From Scrap Tires

General Guidelines

Items not covered in the specifications, and any variations in the specification, are subject to special arrangement between buyer and seller. Percentages listed below are by weight.

Preparation

Consumer and supplier to agree upon preparation for transport, such as the following:

Loose—Whole.
Loose—Chopped. If wire is chopped or shredded, parties may wish to specify the means of processing and/or characteristics of the final product (density, length of pieces, etc.).
**Baled.** Bales of wire should maintain their form during loading, shipment, unloading, storage, and handling typical of that done at a consuming facility, unless otherwise specified.

- **Baled—High Density.** Hydraulically compressed, no dimension larger than 24”, density of at least 75 pounds per square foot.
- **Baled—HRB/Low Density.** Density of less than 75 pounds per square foot. Each bale secured with sufficient number of bale ties drawn tight to insure a satisfactory delivery.

**Other Means of Preparation.** Individual specifications to be agreed upon between consumer and supplier.

</table>
Railbound Manganese Frogs and Switch Points with manganese inserts that have not been cut apart.

Malleable. Malleable parts of automobiles, railroad cars, locomotive and/or miscellaneous malleable castings.

Melting Steel, Railroad No. 1. Clean wrought iron or steel scrap, \( \frac{1}{4} \) inch and over in thickness, not over 18 inches in width, and not over 5 feet in length. May include pipe ends and material 1/8 inch to \( \frac{1}{4} \) inch in thickness, not over 15 inches x 15 inches. Individual pieces cut so as to lie reasonably flat in charging box.

Rail, Steel No. 1. Standard section tee rails, original weight 50 pounds per yard or heavier, 10 feet long and over. Suitable for rerolling into bars and shapes. Free from bent and twisted rails, frog, switch, and guard rails, or rails with split heads and broken flanges. Continuous welded rail may be included provided no weld is over 9 inches from the end of the piece of rail.

Rail, Steel No. 2 Cropped Rail Ends. Standard section, original weight of 50 pounds per yard and over, 18 inches long and under.

Rail, Steel No. 2 Cropped Rail Ends. Standard section, original weight of 50 pounds per yard and over, 2 feet long and under.

Rail, Steel No. 2 Cropped Rail Ends. Standard section, original weight 50 pounds per yard and over, 3 feet long and under.

Rail, Steel No. 3. Standard section tee, girder, and/or guard rails, to be free from frog and switch rails not cut apart, and contain no manganese, cast, welds, or attachments of any kind except angle bars. Free from concrete, dirt, and foreign material of any kind.

Sheet Scrap, No. 1. Under \( \frac{3}{16} \) inch thick, may include hoops, band iron and/or steel, scoops and/or shovels (free of wood). Must be free from burnt or metal coated material, cushion, or other similar springs.

Sheet Scrap, No. 2. Galvanized or tinned material and/or gas retorts, and/or any other iron or steel material not otherwise classified.

Steel, Tool. (Specify kind in offering.)

Steel, Manganese. All kinds of manganese, rail, guard rails, frogs and/or switch points, cut or uncut.

Steel, Spring. Coil and/or elliptical, minimum thickness \( \frac{1}{4} \) inch, may be assembled or cut apart.

Steel, Spring. Coil only.

Structural, Wrought Iron and/or Steel Uncut. All steel or steel mixed with iron from bridges, structures and/or equipment that has not been cut apart, may include uncut bolsters, brakebeams, steel trucks, underframes, channel bars, steel bridge plates, frog and/or crossing plates and/or other steel of similar character.

Tires. All locomotive, not cut to specified lengths.

Turnings. No. 1. Heavy turnings from wrought iron and/or steel railroad axles or heavy forgings and/or rail chips, to weigh not less than 75 pounds per cubic foot. Free from dirt or other foreign material of any kind. Alloy steel scrap may be excluded from these specifications by mutual agreement between buyer and seller.

Turnings, Drillings and/or Borings. No. 2. Cast, wrought, steel and/or malleable iron borings, turnings and/or drillings mixed with other metals.

Wheels, No. 1. Cast iron car wheels.

Wheels, No. 3. Solid cast steel, forged, pressed and/or rolled steel car and/or locomotive wheels, not over 42 inches diameter. (Specify kind in offering.)

Destroyed Steel Cars. Bodies of steel cars cut apart sufficiently to load. (Specify kind.)

Destroyed Steel Car Sides and Box Car Roofs. Cut to a maximum length of... and a maximum width of... suitable for use in super presses and shears without additional preparation.

*Specifications in force as of publication date.
Guidelines for Glass Cullet: GC-2017

Container Glass Cullet Specifications

Preamble
These standards and practices apply to container glass cullet for purchase or sale in the United States and Canada. Transactions covering shipments to or from other countries may also be in accordance with these standards and practices and may be modified by mutual agreement between buyer and seller. These specifications are guidelines for buying and selling container glass cullet and always subject to the buyer and seller’s agreement.

Scrap Glass Definitions

Container Glass Cullet: crushed or whole scrap soda-lime-silica container glass.

Unprocessed Container Glass Cullet: broken or whole scrap glass containers that comply with the proper ISRI glass specifications.

Processed (Furnace Ready) Container Glass Cullet: crushed and whole contaminate-free scrap container glass that complies with the proper ISRI glass specifications.

Organic Matter: consists of organic materials that are non-container glass items; for example, paper labels should not exceed 0.2%.

Ferrous Materials: are magnetic metals, i.e. steel, iron, etc., and therefore must be removed during scrap glass processing.

Non-ferrous Materials: are non-magnetic metals, i.e. aluminum, lead, copper, etc., and therefore must be removed during glass processing.

The Purchase Agreement
Each transaction covering the purchase or sale of container glass cullet should be confirmed in writing and include agreement on the following items:

1. Product
Where possible, each container glass cullet grade shall be specified in accordance with the grade as defined.

2. Quantity
Where possible, the quantity shall always be specified in terms of a definite number of tons of 2,000 pounds each.

   A. If the quantity is specified in tons, the order shall be considered completed when aggregate shipments are 5% under or over the quantity ordered.

   B. If the quantity is specified in carloads or truckloads, a “load” shall be defined as a truck, trailer, or railroad car loaded to full visible capacity not to exceed established legal weight limits.

3. Packaging
It should be stated whether shipped units are to be in boxes, or in bulk by railroad car, truck, or trailer. Where possible, approximate weights should be specified.

4. Price Units
The price agreed upon shall be clearly stated in US dollars and cents per 2,000 pounds or in US dollars and cents per hundred weight.

5. Terms
Terms shall be “net cash 30 days after date of shipment” unless otherwise agreed upon.

Arbitration
In the event of a total disagreement between buyer and seller, the dispute should be submitted to ISRI arbitration. In all cases, the cost of arbitration shall be borne by the party found to be at fault, or split in the event of compromise, as determined by the arbitrators.

UNPROCESSED FLINT CONTAINER GLASS CULLET SPECIFICATIONS

Composition: Soda-lime-silica beverage or food container glass.

Cullet Colors Segregation: Flint Cullet

Size: Cullet may be broken but not pulverized.

Moisture: Cullet should be free of excess moisture.

Contaminant Listings:

Outthrow Materials: Normal container labels; ring and metal closures where processing capabilities permit.

Prohibitive Materials: Non-acceptable items include non-container glass (vision ware, light bulbs, crystal, windows, mirrors, drinking glasses, ceramic, milk glass, etc.) metals, ores, minerals, bricks, clay, grinding and refractory materials, rocks, clay and ceramic closures.

General: The quality of the unprocessed flint container glass cullet must be such that after beneficiation with a conventional container glass cullet processor it will be suitable for the production of glass containers.

UNPROCESSED AMBER CONTAINER GLASS CULLET SPECIFICATIONS

Composition: Soda-lime-silica beverage or food container glass.

Cullet Colors Segregation: Amber Cullet

- Ceramics (such as cups, saucers, dinnerware, pottery, etc.)
Material Recovery Facility (MRF) Glass

Material Recovery Facility-derived 3-Color Mixed Container Glass (“MRF Glass”):

MRF Glass consists of crushed or whole scrap Flint (clear), Amber (brown), and Green (emerald) container/bottle glass made from soda-lime-silica. These standards and practices apply to 3-color mixed glass for purchase or sale in the United States and Canada. Transactions covering shipments to or from other countries may also be in accordance with these standards and practices and may be modified by mutual agreement between buyer and seller. These specifications are guidelines for buying and selling MRF glass and are always subject to the buyer and seller’s agreement. It is recognized that MRF Glass may be mixed with other materials as a result of recycling collection convenience and efficiency, and that quality levels vary widely based on the amount of contamination mixed in with the glass.

Other Glass (for example, plate window glass, heat-resistant glass—such as Pyrex—and lead based glass—such as crystal ware, television tubes, vision ware, etc.)

Other Materials (such as bricks, rocks, etc.)

Contamination:

Non-Glass Residue – Materials found in dual stream and single stream curbside collection programs entering a Material Recovery Facility (MRF). Examples of this material may be: paper, wood, food or organic material, metal/plastic closures, labels, corks, rock, dirt, and other inert materials. Maximum tolerance -35%.

Undersized or Pulverized Material (“Fines”) - This material consists of mixed color glass particles crushed so small as to render current optical sortation unfeasible. Glass particles less than 1/8” are typically considered to be fines. Maximum tolerance -30%.

Ceramics - This material consists of broken bits of household ceramic. Examples of ceramic materials are dinner plates, mugs, cups, etc. Maximum tolerance - 2%

Moisture – This considered excessive water mixed with glass. Examples of moisture are small fibers soaked by rain, ice or snow. Organic materials and dirt can also contain moisture. Maximum tolerance - 5%.

Prohibitives: This material is not allowed and can subject a load to rejection procedure.

- 0.25% of total load allowed:
  - Pyro Ceramics (Fireplace glass)
  - Gypsum, wallboard, drywall, glass from construction & demolition debris mixed with CaCO3 fines
  - Common moisture-absorbing desiccants (silica gels beads, alumina pellets, closet paks, etc.)

- 0% of total load allowed:
  - CRT glass
  - Lead glass
  - Tempered window glass
  - Flammables
  - Radioactive waste
  - Weapons
  - Medical Waste
  - Insecticides
  - Poisons
  - Heavy Metals
  - Asbestos
  - Other materials that can be classified as hazardous or harmful to human health or the environment

Since there are many different generations of Material Recovery Facilities (MRFs), cleaning equipment in operation, and curbside collection programs, the quality generated by MRFs varies widely. Processors evaluate this heterogeneous material by evaluating the amount of:

- Residue (non-glass residue): Higher amounts of residue result in a lower rank as the processor must separate this residue and dispose of it.

- Undersize: Undersize is otherwise known as “fines”. Higher amounts of undersize result in quality issues as very small pieces of glass can’t be optically sorted. If a disproportional amount of the stream is too small, it can overwhelm the processor’s capabilities.

Preamble
These standards and practices apply to paper stock for repulping only and are for use in the United States, Canada, and Mexico. Transactions may be modified by mutual agreement between Buyer and Seller.

Basic to the Success of any Buyer-Seller Relationship is an Atmosphere of “Good Faith.”
In keeping with this, the following principles have been established:

1. Seller must use due diligence to ascertain that shipments consist of properly packed paper stock and that shipments are made during the period specified.
2. Arbitrary deductions, cancellations and/or rejections by the Buyer are counter to acceptable good trade practices.
3. Seller shall provide the quality of paper stock agreed upon but shall not be responsible for the use of the paper stock or manufactured product.

I. The Purchase Agreement
Each transaction covering the purchase or sale of paper stock shall be confirmed in writing and include agreement on the following items:

1. Quantity
Where possible, the quantity shall always be specified in terms of a definite number of short tons of 2,000 lbs. each or metric tonnes of 2,204.6 pounds each.
   a. When the quantity is specified in tons or tonnes, the order shall be considered completed when aggregate shipments are 5% under or over the quantity ordered.
   b. When the quantity is specified in carloads or truckloads, a “load” shall be defined as a truck, trailer, or railcar loaded in accordance with the ISRI/AF&PA Shipping Guide.
   c. The Buyer and Seller may establish minimum carload and/or truckload weights.

2. Grades
Where possible, each grade purchased shall be specified in accordance with the grade as defined in SECTION VI herein.

3. Packing
Unit type, i.e.: bales, skids, rolls, pallets, boxes, securely tied bundles or loose should be specified.

4. Pricing and Terms
The agreed price and payment terms shall be clearly stated.

5. Shipping Terms
Shipping terms shall be indicated with the use of phrases such as “f.o.b. shipping point” or “f.o.b. delivered.”

6. Shipping Instructions
Shipping instructions should clearly specify shipping schedule, route, carrier and destination.

7. Shipping Period
The shipping period shall be understood to be within the same calendar month of the date of the order unless otherwise specified.

II. Fulfillment by the Seller
The practice of the Seller shall be in accordance with the following:

1. Acceptance
All orders shall be confirmed in writing.

2. Grading
Paper stock sold under the grade names appearing in SECTION VI shall conform to those grading definitions.

3. Baling
Each bale must be secured with a sufficient number of bale ties drawn tight to ensure a satisfactory delivery.

4. Tare
If agreed to by the Buyer, sides and headers may be used to make a satisfactory delivery of the bales but must not be excessive. The weight of skids, Gaylord boxes and other similar materials shall be deducted from the gross invoice weight.

5. Loading
Paper stock shall be loaded as follows:
   a. Before they are loaded, railcars and trucks shall be free from objectionable materials and odors, and shall have sound floors and doors.
   b. All loads should consist entirely of one grade of paper stock unless otherwise agreed to. When two or more grades are included in the same load, units of each grade should be kept together in a separate part of the railcar or truck.
   c. Paper stock must be loaded in a manner that will minimize shifting and breakage. Excessive breakage due to improper loading can be cause for rejection.
   d. Paper stock shall be loaded in accordance with industry safety best practices.
      Please refer to the following guide for valuable safety information: http://www.isri.org/safeshipping

6. Shipping Notice/Bill of Lading
Shipping by Truck
A bill of lading or shipping notice shall accompany each shipment to the Buyer and should include the following:
   a. Date of shipment
   b. Release number (if applicable)
c. Number of bales/rolls
d. Grade of paper
e. Name of trucking company, trailer number and driver’s signature
f. Shipper’s signature

Shipping by Rail
When shipping by railcar, a bill of lading with shipping instructions shall be provided to the railroad and to the Buyer immediately upon release of the railcar and these documents should include the following:

a. Date of shipment
b. Release number (if applicable)
c. Number of bales/rolls
d. Grade of paper
e. Car number
f. Weighing instructions
g. Routing
h. Destination
i. Shipper’s signature

7. Invoicing
Invoices, if required, should conform to instructions on the order and include the following data:

a. Date of shipment
b. Railcar or truck number
c. Customer’s order number
d. Release Number (if applicable)
e. Shipper’s invoice number
f. FOB point
g. Number of units (bales, rolls, skids etc.)
h. Weight and grade
i. Price and extension
j. Payment terms

8. Rejection
When notified of a rejection, the Seller must, within two business days, advise the Buyer as to which of the following procedures the Seller has decided upon:

a. Agree with the Buyer to a compromise acceptance and settlement.
b. Inspect the quality of the rejected material. The inspection and final disposition by the Seller shall take place within three business days of the notification. By mutual agreement, this time limit may be exceeded.
c. Order reshipment of the material.
d. Request that the Buyer agree to submit the rejected shipment to arbitration.

III. Fulfillment by the Buyer
The practice of the Buyer shall be in accordance with the following:

Upon receipt of the shipment, the Buyer is to make all possible effort to inspect the contents while it is still loaded.

a. Acceptable Loads (i.e. quality of paper stock, weight, bale integrity, moisture, order quantity, etc.)
if the shipment appears to be in accordance with the order, the shipping notice and other parameters as established between the Buyer and the Seller, the Buyer shall proceed with the unloading and shall provide the Seller with the receiving weights within three business days of unloading.

b. Unacceptable Loads (i.e. quality of paper stock, weight, bale integrity, moisture, order quantity, etc.)
if the shipment does not appear to be in accordance with the order, the shipping notice or any other parameters as established between the Buyer and the Seller, the Buyer shall immediately notify the Seller.

the Buyer shall set aside any portion of the shipment that is controversial and take reasonable care to protect that paper stock from any external deterioration or contamination until the final disposition of that shipment is determined.

Buyer has 21 days to downgrade or reject
if the Buyer, at any time with 21 calendar days after receipt of a shipment, finds objectionable materials heretofore not visible, the Buyer shall have the right to downgrade or reject the paper stock and shall immediately notify the Seller. The Seller will then determine the final disposition of the shipment.

in the event of a rejection, the Buyer shall be responsible for any paper stock used by the Buyer, and the attendant freight, other than such quantity as may be considered reasonable for laboratory sampling or testing purposes.

IV. Miscellaneous Practices
1. Ownership
a. When the shipment is purchased “f.o.b. shipping point” and is in accordance with the agreement covering the transaction, it becomes the property of the Buyer when loaded.
b. When the shipment is purchased on a “delivered” basis and is in accordance with the agreement covering the transaction, it remains the property of the Seller until it is delivered to the Buyer.
c. If the shipment is purchased on an “f.o.b. shipping point-specified freight allowed” basis and is in accordance with the agreement covering the transaction, it becomes the property of the Buyer when loaded on the transportation vehicle.

2. Carrier Selection
a. F.O.B. Shipping Point. Selection of the carrier is at the discretion of the Buyer unless otherwise agreed.
b. F.O.B. Delivered. Selection of the carrier is at the discretion of the Seller unless otherwise agreed.
c. Any excess freight charges accruing on a shipment due to the failure of the Seller to adhere to the purchase agreement is the liability of the Seller.
d. Any excess freight charges accruing on a shipment due to the failure of the Buyer to adhere to the purchase agreement is the liability of the Buyer.

3. Weight Discrepancies
No adjustments shall be made on any shipment of paper stock when the weight variation is 1% or less.
If the variation exceeds 1% the Seller may initiate a Weight Review by submitting a certified scale weight (showing the gross, tare and net of the load) and/or a loading tally showing individual bale weights. The Buyer shall then review the data and either:
a. adjust the received weight, or
b. decline the appeal, in which case the Buyer’s weight shall prevail.

4. Moisture Content
All paper must be packed air dry.
Where excess moisture is present in the shipment, the Buyer has the right to request an adjustment and if a settlement cannot be reached, the Buyer has the right to reject the shipment.

V. Arbitration
In the event of a dispute where agreement cannot be reached between Buyer and Seller, the dispute may be submitted to ISRI arbitration as long as one of the parties is a member of the association. Refer to ISRI Arbitration Services section of this document for further information.

VI. Grade Definitions
The definitions which follow describe grades as they should be sorted and packed. CONSIDERATION SHOULD BE GIVEN TO THE FACT THAT PAPER STOCK AS SUCH IS A SECONDARY MATERIAL PRODUCED MANUALLY AND MAY NOT BE TECHNICALLY PERFECT. Definitions may not specifically address all types of processes used in the manufacture or recycling of paper products. Specific requirements should be discussed between Buyer and Seller during negotiations.

Outthrows
The term “Outthrows” as used throughout this section is defined as “all papers that are so manufactured or treated or are in such a form as to be unsuitable for consumption as the grade specified.”

Prohibitive Materials
The term “Prohibitive Materials” as used throughout this section is defined as:
a. Any materials which by their presence in a packing of paper stock, in excess of the amount allowed, will make the pack unusable as the grade specified.
b. Any materials that may be damaging to equipment.
c. All sorted recovered paper stock must be free of food debris, medical or hazardous wastes and poisonous or other harmful substances or liquids.
d. Wax is a Prohibitive unless accepted and pre-approved by the Buyer.

A material can be classified as an “Outthrow” in one grade and as a “Prohibitive Material” in another grade. Carbon paper, for instance, is “UNSUITABLE” in Mixed Paper and is, therefore, classified as an “Outthrow;” whereas it is “UNUSABLE” in White Ledger and in this case is classified as a “Prohibitive Material.”

Other Acceptable Papers
The term “Other Acceptable Papers” as used throughout this section is defined as “all other papers that are deemed acceptable by the buyer and allowed in that buyer’s pack up to the percentage allowed.”

Glossary of Terms
A supplemental glossary of paper stock terms is located at the end of the Domestic Transactions section. The purpose of this limited list of terms is to help the user better understand specific grade definitions contained within this Circular.

(4) Boxboard Cuttings
Consists of new cuttings of paperboard used in the manufacture of folding cartons, set-up boxes and similar boxboard products.
Prohibitive Materials may not exceed ½ of 1%
Outthrows plus prohibitives may not exceed 2%

(5) Mill Wrappers
Consists of paper used as outside wrap for rolls, bundles, or skids of finished paper.
Prohibitive Materials may not exceed ½ of 1%
Outthrows plus prohibitives may not exceed 3%

(9) Over-Issue News (OIN or OIN)
Consists of unused, overrun newspapers printed on newsprint, containing not more than the normal percentage of rotogravure and colored sections.
Prohibitive Materials None permitted
Outthrows plus prohibitives None permitted

(10) Magazines (OMG)
Consists of coated magazines, catalogues, and similar printed materials. May contain a small percentage of uncoated news-type paper.
Prohibitive Materials may not exceed 1%
Outthrows plus prohibitives may not exceed 3%

(11) Old Corrugated Containers (OCC)
Consists of corrugated containers having liners of either test liner or kraft.
Prohibitive Materials may not exceed 1%
Outthrows plus prohibitives may not exceed 5%
(12) Double-Sorted Old Corrugated (DS OCC)
Consists of double-sorted corrugated containers, generated from supermarkets and/or industrial or commercial facilities, having liners of test liner or kraft. Material has been specially sorted to be free of boxboard, off-shore corrugated, plastic, and wax.
Prohibitive Materials may not exceed ½ of 1%
Outthrows plus prohibitives may not exceed 2%

(13) New Double-Lined Kraft Corrugated Cuttings (DLK)
Consists of new corrugated cuttings having liners of either test liner or kraft. Treated medium or liners, insoluble adhesives, butt rolls, slabbed or hogged medium, are not acceptable in this grade.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(14) Fiber Cores
Consists of paper cores made from either recycled paperboard and/or linerboard, single or multiple plies. Metal or plastic end caps, wood plugs, and textile residues are not acceptable in this grade.
Prohibitive Materials may not exceed 1%
Outthrows plus prohibitives may not exceed 5%

(15) Used Brown Kraft
Consists of brown kraft bags free of objectionable liners and original contents.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(16) Mixed Kraft Cuttings
Consists of new brown kraft cuttings, sheets and bag scrap free of stitched paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed .1%

(17) Carrier Stock
Consists of printed or unprinted, unbleached new beverage carrier sheets and cuttings. May contain wet strength additives.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(18) New Colored Kraft
Consists of new colored kraft cuttings, sheets and bag scrap, free of stitched papers.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(19) Kraft Grocery Bag (KGB)
Consists of new brown kraft bag cuttings, sheets and misprint bags.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(20) New Kraft Multi-Wall Bag
Consists of new brown kraft multi-wall bag cuttings, sheets, and misprint bags, free of stitched papers.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(21) New Brown Kraft Envelope Cuttings
Consists of new unprinted brown kraft envelopes, cuttings or sheets.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(22) Mixed Flyleaf Shavings
Consists of trim of magazines, catalogs, inserts and similar printed matter, not limited with respect to groundwood, uncoated or coated stock, and may contain the bleed of cover and insert stock as well as beater-dyed paper and solid color printing.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(23) Telephone Directories
Consists of clean telephone directories printed for or by telephone directory publishers.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(24) White Blank News (WBN)
Consists of unprinted cuttings and sheets of white newsprint or other uncoated white groundwood paper of similar quality.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(25) Groundwood Computer Printout (GW CPO)
Consists of groundwood papers which are used in forms manufactured for use in data processing machines. This grade may contain colored stripes and impact or nonimpact (e.g., laser) computer printing.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(26) Publication Blanks (CPB)
Consists of unprinted cuttings or sheets of white coated or filled groundwood content paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(27) Coated Flyleaf Shavings
Consists of lightly printed trim from magazines, catalogs and similar printed matter, not limited with respect to groundwood, uncoated or coated stock. The bleed of cover, insert card stock, and beater-dyed paper may not exceed 2%.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(28) Coated Soft White Shavings (SWS)
Consists of unprinted, coated, and uncoated shavings and sheets of white groundwood-free printing paper. May contain a small percentage of groundwood.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(29) (Grade not currently in use)

(30) Hard White Shavings (HWS)
Consists of shavings or sheets of unprinted, untreated white groundwood-free paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%
(31) Hard White Envelope Cuttings (HWEC)
Consists of groundwood-free cuttings, shavings, or sheets of unprinted, untreated, and uncoated white envelope paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(32) (Grade not currently in use)

(33) New Colored Envelope Cuttings
Consists of groundwood-free cuttings, shavings, or sheets of untreated, uncoated bleachable colored envelope paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(34) (Grade not currently in use)

(35) Semi Bleached Cuttings
Consists of sheets and cuttings of unprinted, untreated, groundwood-free paper such as file folder stock, untreated milk carton stock, or manila tag.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(36) Unsorted Office Paper (UOP)
Consists of printed or unprinted paper typically generated in an office environment that may include a document destruction process. This grade may contain white, colored, coated and uncoated papers, manila and pastel colored file folders.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 10%

(37) Sorted Office Paper (SOP)
Consists of paper, as typically generated by offices, containing primarily white and colored groundwood-free paper, free of unbleached fiber. May include a small percentage of groundwood computer printout and facsimile paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 5%

(38) (Grade not currently in use)

(39) Manifold Colored Ledger (MCL)
Consists of sheets, shavings, and cuttings of industrially-generated printed or unprinted colored or white groundwood-free paper. All stock must be uncoated and free of nonimpact printing. A percentage of carbonless paper is allowable.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(40) Sorted White Ledger (SWL)
Consists of uncoated, printed or unprinted sheets, shavings, guillotined books, and cuttings of white groundwood-free ledger, bond, writing, and other paper which has similar fiber and filler content.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(41) Manifold White Ledger (MWL)
Consists of sheets, shavings, and cuttings of industrially-generated printed or unprinted white groundwood-free paper. All stock must be uncoated.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(42) (Grade no longer in use)

(43) Coated Book Stock (CBS)
Consists of coated groundwood-free paper, printed or unprinted in sheets, shavings, guillotined books and cuttings. A reasonable percentage of paper containing fine groundwood may be included.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(44) Coated Groundwood Sections (CGS)
Consists of printed, coated groundwood paper in sheets, sections, shavings or guillotined books. This grade may not include news quality groundwood paper.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(45) Lightly Printed Bleached Board Cuttings
Consists of groundwood-free printed bleached board cuttings, free from misprint sheets, cartons, wax, greaseproof lamination, metallic, and inks, adhesives or coatings that are insoluble.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(46) Printed Bleached Board
Consists of groundwood-free unprinted sheets, cartons and cuttings of bleached board, free from wax, greaseproof lamination, metallic, and inks, adhesives or coatings that are insoluble.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(47) Unprinted Bleached Board
Consists of groundwood-free unprinted, untreated bleached board cuttings, sheets or rolls, free from wax, greaseproof lamination and adhesives or coatings that are insoluble.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(48) #1 Bleached Cup Stock (#1 Cup)
Consists of uncoated cuttings or sheets of coated or uncoated cup base stock. Cuttings with slight bleed may be included. Must be free of wax, poly, and other coatings that are insoluble.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(49) #2 Printed Bleached Cup Stock (#2 Cup)
Consists of printed, uncoated formed cups, cup die cuts, and misprint sheets of coated or uncoated cup base stock. Glues must be water soluble. Must be free of wax, poly, and other coatings that are insoluble.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(50) Unprinted Bleached Plate Stock
Consists of groundwood-free bleached coated or uncoated, untreated and unprinted plate cuttings and sheets.
Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%
(51) **Printed Bleached Plate Stock**  
Consists of groundwood-free bleached coated or uncoated, untreated printed plates and sheets. Must be free of coatings or inks that are insoluble.  
Prohibitive Materials: None permitted  
Outthrows plus prohibitives may not exceed 1%

(52) **Aseptic Packaging and Gable-Top Cartons**  
Consists of liquid packaging board containers including empty, used, polyethylene (PE)-coated, printed one-side aseptic and gable-top cartons containing no less than 70% bleached chemical fiber and may contain up to 6% aluminum foil and 24% PE film.  
Prohibitive Materials: May not exceed 2%  
Outthrows plus prohibitives may not exceed 5%

(54) **Mixed Paper (MP)**  
Consists of all paper and paperboard of various qualities not limited to the type of fiber content, sorted and processed at a recycling facility.  
Prohibitive Materials: May not exceed 2%  
Outthrows may not exceed 3%

(56) **Sorted Residential Papers & News (SRPN)**  
Consists of sorted newspapers, junk mail, magazines, printing and writing papers and other acceptable papers generated from residential programs (such as residential household and apartment collections and drop-off centers) sorted and processed at a recycling facility. Material should be free of containerboard and brown grades (OCC, Kraft bags, boxboard and Kraft carrier board).  
Prohibitive Materials: May not exceed 2%  
Outthrows may not exceed 3%

(58) **Sorted Clean News (SCN)**  
Consists of sorted clean new papers from source separated collection programs, converters, drop-off centers and paper drives containing the normal percentages of roto gravure, colored and coated sections. May contain inserts that would normally be included in the newspaper in the proper proportions. Grade must be free of excessive ink, brown grades and non-paper material. (Some mills may require pack to be free of flexographic inks.)  
Prohibitive Materials: May not exceed 1/3 of 1%  
Outthrows plus prohibitives may not exceed 1%  
Other papers may not exceed 10%

**Specialty Grades**

The grades listed below are produced and traded in carload and truckload quantities throughout the United States, and because of certain characteristics (i.e., the presence of wet strength, polycoatings, plastic, foil, carbon paper, hot melt glue), are not included in the regular grades of paper stock. However, it is recognized that many mills have special equipment and are able to utilize large quantities of these grades. Since many paper mills around the world do use these specialty grades, they are being listed with appropriate grade numbers for easy reference.

The Paper Stock Industries Chapter of ISRI is not establishing specific specifications, which would refer to such factors as the type of wet strength agent used, the percentage of wax, the amount of polycoating, whether it is on top of or under the printing, etc. The specification for each grade should be determined between Buyer and Seller, and it is recommended that purchase be made based on sample.

These specialty grades are as follows:

1—S  White Waxed Cup Cuttings  
2—S  Printed Waxed Cup Cuttings  
3—S  Poly Coated Cup Stock  
4—S  Polycoated Bleached Kraft—Unprinted  
5—S  Polycoated Bleached Kraft—Printed  
6—S  Polycoated Milk Carton Stock  
7—S  Polycoated Diaper Stock  
8—S  Polycoated Boxboard Cuttings  
9—S  (This Grade No Longer in Use)  
10—S  Printed and/or Unprinted Bleached Sulphate Containing Foil  
11—S  Waxed Corrugated Cuttings  
12—S  Wet Strength Corrugated Cuttings  
13—S  (This Number Not Currently in Use)  
14—S  Beer Carton Scrap  
15—S  Contaminated Bag Scrap  
16—S  Insoluble Glued Free Sheet Paper and/or Board (IGS)  
17—S  White Wet Strength Scrap  
18—S  Brown Wet Strength Scrap  
19—S  Printed and/or Colored Wet Strength Scrap  
20—S  File Stock  
21—S  (This Number Not Currently in Use)  
22—S  Ruled White  
23—S  Flyleaf Shavings Containing Hot Melt Glue  
24—S  (This Number Not Currently in Use)  
25—S  Books with Covers  
26—S  (This Number Not Currently in Use)  
27—S  (This Number Not Currently in Use)  
28—S  (This Number Not Currently in Use)  
29—S  (This Number Not Currently in Use)  
30—S  Plastic Windowed Envelopes  
31—S  Textile Boxes  
32—S  Printed TMP  
33—S  Unprinted TMP  
34—S  Manila Tabulating Cards  
35—S  Sorted Tabulating Cards  
36—S  Computer Printout (CPO)
Glossary of Paper Stock Terms for Both Domestic and Export Transactions

The following is a glossary of paper stock terms used within section VI, Grade Definitions, of the Guidelines for Paper Stock for both Domestic and Export Transactions. These terms are not intended as a dictionary, but as a guide to help the Circular user better understand specific grade definitions as used in the recovered paper industry.

**ADHESIVES:** Bonding substances that are non-water soluble are considered contaminants in pulp subs, groundwood and deinking grades.

**BEATER-DYED:** Paper dyed or colored during the paper manufacturing process.

**BLEACHED:** Paper that has been whitened by chemicals.

**BOARDS:** Paperboard 0.006 inch or thicker.

**BOGUS:** Paper of inferior quality to a standard grade.

**BOXBOARD:** Paperboard made from a variety of recovered fibers having sufficient folding properties and thickness to be used to manufacture folding or set-up boxes.

**CHEMICAL WOOD-FIBER PULP:** Generic for cellulose fiber isolated and purified by a chemical digestive process.

**CHIPBOARD:** Uncoated, non-folding paperboard made from a variety of recovered papers, having sufficient strength and structural properties to be used to manufacture game boards, book covers, notebook backing and similar products.

**COATINGS:** A layer of adhesives, clays, varnish or any barrier applied to paper.

**CONTAINERBOARD:** Linerboard and corrugated medium used to manufacture shipping containers.

**CORES:** Paper tubes on which rolls of paper may be wound for shipment.

**CORRUGATED CONTAINERS:** Shipping containers made with kraft paper linerboard and corrugated medium.

**CUTTINGS:** Paper stock by-product of paper converting operations.

**FILLER/FILLED:** Denotes papers that have minerals (clays or other pigments) added for improving quality or color.

**FLYLEAF/SHAVINGS:** Trim scrap from printing operations.

**FREESHEET:** Paper that contains less than 10% groundwood fiber (synonym: groundwood-free).

**GROUNDWOOD:** Paper made with fibers produced without chemical pulping.

**GILT:** Metallic (gold or silver) inks used in printing.

**HOGGED:** Paper that has been mechanically torn or ripped to reduce its original size.

**HOT-MELT:** A type of glue or adhesive applied while hot/warm. Considered a contaminant in some grades.

**IMPACT (PRINTING):** A paper printing process that physically applies ink to the paper surface.

**INSOLUBLE GLUES:** Glues that won’t dissolve (break down) in water.

**JUTE:** Strong, long-fibered pulp made from hemp.

**KRAFT:** Paper made from sulfate pulp (synonyms: brown and strong).

**LAMINATED:** Paper manufactured by fusing one or more layers of paper together.

**LINERBOARD:** Outside layers of a combination board used to manufacture corrugated shipping containers.

**MANIFEST:** May denote continuous forms or business forms with several parts (may be interleaved with carbon paper or be carbonless papers).

**MEDIUM:** The inner corrugated fluted material used to manufacture corrugated shipping containers.

**NON-IMPACT:** Papers having printing images formed without impact.

**OFF-SHORE/ASIAN:** Denotes corrugated shipping containers manufactured overseas and containing bogus liners or medium. (Color is somewhat lighter/more yellow than North American produced materials).

**PAPERBOARD:** Denotes paper products used for packaging (corrugated boxes, folding cartons, set-up boxes, etc.).

**ROTOGRAVURE:** A paper printing (intaglio) process typically used to create the highest quality of smoothness on coated and uncoated papers. Excess quantities are considered an outthrow in grades #7, #8, and #9.

**SECTIONS:** Unbound, unused printed material with full ink coverage.

**SHAVINGS:** Trim from converting and bindery operations.

**SIGNATURES:** A section of book obtained by folding a single sheet of printing paper.

**SLABBED:** Type of paper stock normally generated by cutting rolls.

**SULFITE:** Papers and boards made from pulps made from an acid process.

**SULPHATE:** Papers and boards made from alkaline processed pulps.

**TEST LINER:** Liners, which are the outer ply of any kind of paperboard, containing 100% recycled material.

**TMP:** Thermomechanical pulp.

**TREATED:** Paper manufactured with additives.

**TRIM:** Cuttings of paper stock generated at converting or bindery operations which normally have little or no printing.

**ULTRA-VIOLET (UV) INKS/COATINGS:** Papers having inks or coatings dried by utilizing an ultraviolet radiation method. Considered a contaminant in deinking grades.

**WET STRENGTH:** Papers that have been treated with a moisture-resistant chemical that inhibits pulping.
Guidelines for Paper Stock: PS-2017—Export Transactions

Paper Stock: Export Transactions

Preamble

These standards and practices apply to paper stock for repulping only and are for use in export transactions from the United States, Canada and Mexico. Transactions may be modified by mutual agreement between Buyer and Seller.

Basic to the success of any Buyer-Seller relationship is an atmosphere of “good faith.”

In keeping with this, the following principles have been established:

1. Seller must use due diligence to ascertain that shipments consist of properly packed paper stock and that shipments are made during the period specified.
2. Arbitrary deductions, cancellations and rejections by the Buyer are counter to acceptable good trade practice.
3. Seller shall deliver the quality of paper stock agreed upon but shall not be responsible for the use of the paper or for the manufactured product.

I. The Purchase Agreement

Each transaction covering the purchase or sale of paper stock should be confirmed in writing and include agreement on the following items:

1. Quantity
   Where possible, the quantity shall always be specified in terms of a definite number of metric tons of 2,204.6 pounds each, or short tons of 2,000 pounds each.
   a. When the quantity is specified in tons or tonnes, the order shall be considered completed when aggregate shipments are 5% under or over the quantity ordered.
   b. The Buyer and Seller shall establish minimum container-load weights.

2. Grades
   Where possible, each grade purchased shall be specified in accordance with the grade as defined in the latest Paper Stock Industries Chapter Standards and Practices Circular. Any deviation from the grades listed in the simplified Circular should be specified and agreed to by both parties.

3. Packing
   Unit type, i.e. bales, skids, rolls, pallets, boxes, or bundles should be specified.

4. Pricing and Terms
   The agreed price and payment terms shall be clearly stated.

5. Shipping Terms
   Shipping terms shall be indicated with the use of acronyms such as: “F.A.S.,” “C&F,” “C.I.F.” or “CY.”

6. Shipping Instructions
   Shipping instructions should be provided by the Buyer at the time of the order. Information should include: consignee, notify party, documentation, and inspection requirements. Insurance and freight payment information should be mutually agreed upon.

7. Shipping Period
   The shipping period shall be mutually agreed upon by the Buyer and the Seller.

8. Method of Invoicing
   Invoicing instructions shall be clearly stated.

II. Fulfillment by the Seller

Practices of the Seller shall be in accordance with the following:

1. Acceptance
   All orders shall be confirmed in writing.

2. Grading
   Paper stock which is sold under the grade names appearing in the PSI Standards and Practices Circular shall conform to those grading definitions.

3. Packing
   Each unit must be sufficiently secured to ensure a satisfactory delivery.

4. Tare
   If agreed to by the Buyer, sides and headers may be used to make a satisfactory delivery of the bales but must not be excessive. The weight of the skids and other similar materials shall be deducted from a gross invoice weight.

5. Loading
   Paper stock shall be loaded as follows:
   a. All loads shall consist entirely of one grade of paper stock unless otherwise agreed to. When two or more grades are included in the same shipment, units of each grade shall be kept together in a separate part of the container.
   b. Paper stock must be loaded in a manner that will minimize shifting and breakage. Excessive breakage prior to unloading may be cause for a claim.

6. Shipping Notice
   A packing list, shipping advice and/or an invoice shall be sent to the Buyer within 72 hours of the vessel sailing.

7. Invoicing
   Invoicing should conform to the instructions on the order and include the following data:
   a. Date of Shipment
   b. Container Number
   c. Steamship Line, Vessel, Voyage Number
d. Bill of Lading Number  
e. Customer’s Order Number  
f. Shipper’s Invoice Number  
g. Number of Units etc.  
h. Weight and Grade  
i. Price and Extension  
j. Payment Terms

8. Claims
When notified of a claim, the Seller must, within five business days, advise the Buyer as to which of the following procedures the Seller has decided upon:
   a. Agree with the Buyer to a compromise acceptance and settlement.
   b. Require the opportunity to inspect the quality of the material in question.
   c. Request that the Buyer agree to submit the claim to arbitration.

III. Fulfillment by the Buyer
The practice of the Buyer shall be in accordance with the following:

1. Unloading
   After arrival of the shipment, the Buyer is to inspect the contents so far as possible while it is still loaded.
   
   If the shipment appears to be in accordance with the order and shipping notice, the Buyer shall proceed with the unloading.
   
   If the shipment does not appear to be in accordance with the order and shipping notices, or if the quality of the stock is not in accordance with specifications agreed to, the Buyer shall immediately notify the Seller before unloading.
   
   If during the process of unloading, any portion of the shipment not visible in the original inspection is not in accordance with specifications, shipping notice and order, that portion shall be set aside and the Seller immediately notified.
   
   If at any time within 21 days after receipt of shipment, the Buyer, upon opening the bales finds objectionable materials heretofore not visible, he shall immediately notify the Seller
   
   In the event of any claim, the Buyer shall use due diligence to protect all controversial paper stock from external deterioration or contamination.

2. Claims Other Than Quality
The Buyer shall within 10 days of unloading notify the Seller of any necessary changes and shall furnish detailed information with regard to these changes.

3. Rejection
In the event of a rejection, the Buyer shall be responsible for any paper stock used by the Buyer and the freight thereon, other than such quantity as may be considered reasonable for laboratory sampling or testing purposes.

The Buyer must protect the shipment from weather or any other elements until the claim is settled.

IV. Miscellaneous Practices
1. Ownership
If the shipment is purchased on a “delivered destination” basis, and is in accordance with the agreement covering the transaction, it remains the property of the Seller until it is delivered to the Buyer by carrier.

2. Demurrage Charges
   a. Any demurrage accrued on a shipment due to the failure of the Seller to ship in accordance with the order, except with respect to quality, is the liability of the Seller.
   
   b. In the event that a rejection for quality stands, any demurrage accruing on the shipment prior to notification to the Seller shall be the Buyer’s liability.
   
   c. In the event that negotiation of substantiated rejection for quality results in agreement by the Buyer to accept the shipment, then only the demurrage, following notification of the rejection—and including 24 hours after the agreement—becomes the liability of the Seller. Demurrage accruing prior to and including the day of notification becomes the liability of the Buyer.

3. Switching and Freight charges
   Any extra switching or excess freight charges accruing on a shipment due to the failure of the Seller to protect the agreed upon minimum rate or to ship in accordance with the agreement is the liability of the Seller.

4. Weight Discrepancies
   No debits, credits or adjustments shall be issued on any shipment of paper stock when the weight variation is 2% or less.
   
   In the event that a discrepancy exceeds those mentioned above as “allowable,” the Buyer and Seller shall exchange copies of certified weight in containers. In the event that both parties have such records, and errors cannot be determined, it is recommended that the weight closest to the public carrier’s scale weight shall be assumed to be correct, Buyer and Seller should agree on the location of the public carrier’s scale prior to shipment. In the absence of such records on the part of one of the parties, the records of the other party shall govern.

5. Moisture Content
   All paper stock must be packed air dry. A moisture content of 12% is deemed to be air dry.
   
   Where excess moisture is present in the shipment, the Buyer has the right to request an adjustment. Whenever possible, such adjustment shall be made on an average air dry basis.

6. Replacement of Shipment
   In the event that any shipment is rejected due to quality:
   
   Whether or not the shipment is to be replaced is to be decided by mutual agreement between Buyer and Seller.
7. Promptness of Shipment
   a. In the event that Buyer causes shipment to be postponed:

      On instructions of the Buyer, the Seller shall have the option of extending the time limit of the order by the same number of days of the postponement, or of canceling that portion of the order on which shipment was postponed. Seller shall promptly notify Buyer of option selected.

   b. In the event that Seller causes shipment to be postponed:

      On instructions of the Seller, the Buyer shall have the option of extending the time limit of the order by the same number of days of the postponement, or of canceling that portion of the order on which shipment was postponed. Buyer shall promptly notify Seller of option selected.

8. Outthrows
   Outthrows shall be understood to be all papers that are so manufactured or treated or are in such form as to be unsuitable for consumption as the grade specified.

9. Prohibitive Materials
   a. Any materials which, by their presence in a packing of paper stock, in excess of the amount allowed, make the packing unusable as the grade specified.

   b. Any materials which, by their presence in a package of paper stock, pose a risk of damage to the equipment.

   Note: In connection with Items 8 and 9, a material can be classified as an “Outthrow” in one grade and as a “Prohibitive Material” in another grade. Carbon paper, for instance, is “UNSUITABLE” in Mixed Paper and is, therefore, classified as an “Outthrow”; whereas it is “UNUSABLE” in White Ledger and in this case is classified as a “Prohibitive Material.”

V. Arbitration
In the event of a total disagreement between Buyer and Seller, the dispute should be submitted to ISRI arbitration.

In all cases, the cost of arbitration shall be borne by the party found to be at fault, or split in the event of compromise, as determined by the arbitrators.

VI. Grade Definitions
The definitions which follow describe grades as they should be sorted and packed. CONSIDERATION SHOULD BE GIVEN TO THE FACT THAT PAPER STOCK AS SUCH IS A SECONDARY MATERIAL PRODUCED MANUALLY AND MAY NOT BE TECHNICALLY PERFECT. Definitions may not specifically address all types of processes used in the manufacture or recycling of paper products. Specific requirements should be discussed between Buyer and Seller during negotiations.

Outthrows
The term “Outthrows” as used throughout this section is defined as “all papers that are so manufactured or treated or are in such a form as to be unsuitable for consumption as the grade specified.”

Prohibitive Materials
The term “Prohibitive Materials” as used throughout this section is defined as:

a. Any materials which by their presence in a packing of paper stock, in excess of the amount allowed, will make the packaging unusable as the grade specified.

b. Any materials that may be damaging to equipment.

A material can be classified as an “Outthrow” in one grade and as a “Prohibitive Material” in another grade. Carbon paper, for instance, is “UNSUITABLE” in Mixed Paper and is, therefore, classified as an “Outthrow”; whereas it is “UNUSABLE” in White Ledger and in this case is classified as a “Prohibitive Material.”

Other Acceptable Papers
The term “Other Acceptable Papers” as used throughout this section is defined as “all other papers that are deemed acceptable by the buyer and allowed in that buyer’s pack up to the percentage allowed.”

Glossary of Terms
A supplemental glossary of paper stock terms is located at the end of the Domestic Transactions section. The purpose of this limited list of terms is to help the user better understand specific grade definitions contained within this Circular.

(4) Boxboard Cuttings
Consists of new cuttings of paperboard used in the manufacture of folding cartons, set-up boxes, and similar boxboard products.

Prohibitive Materials may not exceed \( \frac{1}{2} \) of 1%

Outthrows plus prohibitives may not exceed 2%

(5) Mill Wrappers
Consists of paper used as outside wrap for rolls, bundles, or skids of finished paper.

Prohibitive Materials may not exceed \( \frac{1}{2} \) of 1%

Outthrows plus prohibitives may not exceed 3%

(9) Over-Issue News (OI or OIN)
Consists of unused, overrun newspapers printed on newsprint, or securely tied in bundles, containing not more than the normal percentage of rotogravure and colored sections.

Prohibitive Materials None permitted

Outthrows plus prohibitives None permitted

(10) Magazines (OMG)
Consists of coated magazines, catalogues, and similar print materials. May contain a small percentage of uncoated news-type paper.

Prohibitive Materials may not exceed 1%

Outthrows plus prohibitives may not exceed 3%

(11) Old Corrugated Containers (OCC)
Consists of corrugated containers having liners of either test liner or kraft.

Prohibitive Materials may not exceed 1%

Outthrows plus prohibitives may not exceed 5%
(12) Double-Sorted Old Corrugated (DS OCC)
Consists of double-sorted corrugated containers, generated from supermarkets and/or industrial or commercial facilities, having liners of test liner or kraft. Material has been specially sorted to be free of boxboard, off-shore corrugated, plastic, and wax.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(13) New Double-Lined Kraft Corrugated Cuttings (DLK)
Consists of new corrugated cuttings having liners of either test liner or kraft. Treated medium or liners, insoluble adhesives, butt rolls, slabbled or hogged medium, are not acceptable in this grade.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(14) Fiber Cores
Consists of paper cores made from either recycled paperboard and/or linerboard, single or multiple plies. Metal or plastic end caps, wood plugs, and textile residues are not acceptable in this grade.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(15) Used Brown Kraft
Consists of used brown kraft bags free of objectionable liners and original contents.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(16) Mixed Kraft Cuttings
Consists of new mixed kraft cuttings, sheets and bag scrap free of stitched paper.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(17) Carrier Stock
Consists of printed or unprinted, unbleached new beverage carrier sheets and cuttings. May contain wet strength additives.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(18) New Colored Kraft
Consists of new colored kraft cuttings, sheets and bag scrap, free of stitched papers.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(19) Kraft Grocery Bag (KGB)
Consists of new brown kraft bag cuttings, sheets and misprint bags.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(20) New Kraft Multi-Wall Bag
Consists of new brown kraft multi-wall bag cuttings, sheets, and misprint bags, free of stitched papers.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(21) New Brown Kraft Envelope Cuttings
Consists of new unprinted brown kraft envelopes, cuttings or sheets.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(22) Mixed Flyleaf Shavings
Consists of trim of magazines, catalogs, inserts and similar printed matter, not limited with respect to groundwood, uncoated or coated stock, and may contain the bleed of cover and insert stock as well as beater-dyed paper and solid color printing.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(23) Telephone Directories
Consists of clean telephone directories printed for or by telephone directory publishers.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(24) White Blank News (WBN)
Consists of unprinted cuttings and sheets of white newsprint or other uncoated white groundwood paper of similar quality.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(25) Groundwood Computer Printout (GW CPO)
Consists of groundwood papers which are used in forms manufactured for use in data processing machines. This grade may contain colored stripes and impact or nonimpact (e.g., laser) computer printing.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 2%

(26) Publication Blanks (CBP)
Consists of unprinted cuttings or sheets of white coated or filled groundwood content paper.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(27) Coated Flyleaf Shavings
Consists of lightly printed trim from magazines, catalogs and similar printed matter, not limited with respect to groundwood, uncoated or coated stock. The bleed of cover, insert card stock, and beater-dyed paper may not exceed 2%.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(28) Coated Soft White Shavings (SWL)
Consists of unprinted, coated, and uncoated, shavings and sheets of white groundwood-free printing paper. May contain a small percentage of groundwood.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed 1%

(29) (Grade not currently in use)

(30) Hard White Shavings (HWS)
Consists of shavings or sheets of unprinted, untreated white groundwood-free paper.

Prohibitive Materials None permitted
Outthrows plus prohibitives may not exceed ½ of 1%
(31) Hard White Envelope Cuttings (HWEC)
Consists of groundwood-free cuttings, shavings or sheets of unprinted, untreated and uncoated white envelope paper.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(32) (Grade not currently in use)

(33) New Colored Envelope Cuttings
Consists of groundwood-free cuttings, shavings, or sheets of untreated, uncoated bleachable colored envelope paper.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(34) (Grade not currently in use)

(35) Semi Bleached Cuttings
Consists of unprinted, untreated, groundwood-free paper such as file folder stock, untreated milk carton stock, or manila tag.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(36) Unsorted Office Paper (UOP)
Consists of printed or unprinted paper typically generated in an office environment that may include a document destruction process. This grade may contain white, colored, coated and uncoated papers, manila and pastel colored file folders.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 10%

(37) Sorted Office Paper (SOP)
Consists of paper, as typically generated by offices, containing primarily white and colored groundwood-free paper, free of unbleached fiber. May include a small percentage of groundwood computer printout and facsimile paper.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 5%

(38) (Grade not currently in use)

(39) Manifold Colored Ledger (MCL)
Consists of sheets, shavings, and cuttings of industrially-generated printed or unprinted colored or white groundwood-free paper. All stock must be uncoated and free of nonimpact printing. A percentage of carbonless paper is allowable.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(40) Sorted White Ledger (SWL)
Consists of uncoated, printed or unprinted sheets, shavings, guillotined books, and cuttings of white groundwood-free ledger, bond, writing, and other paper which has similar fiber and filler content.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(41) Manifold White Ledger (MWL)
Consists of sheets, shavings, and cuttings of industrially-generated printed or unprinted white groundwood-free paper. All stock must be uncoated.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(42) (Grade no longer in use)

(43) Coated Book Stock (CBS)
Consists of coated groundwood-free paper, printed or unprinted in sheets, shavings, guillotined books and cuttings. A reasonable percentage of paper containing fine groundwood may be included.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(44) Coated Groundwood Sections (CGS)
Consists of printed, coated groundwood paper in sheets, sections, shavings or guillotined books. This grade may not include news quality groundwood paper.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(45) Lightly Printed Bleached Board Cuttings
Consists of groundwood-free printed bleached board cuttings, free from misprint sheets, cartons, wax, greaseproof lamination, metallic, and inks, adhesives or coatings that are insoluble.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(46) Printed Bleached Board
Consists of groundwood-free unprinted sheets, cartons and cuttings of bleached board, free from wax, greaseproof lamination, metallic, and inks, adhesives or coatings that are insoluble.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 2%

(47) Unprinted Bleached Board
Consists of groundwood-free unprinted bleached board cuttings, sheets or rolls, free from wax, greaseproof lamination and adhesives or coatings that are insoluble.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 1%

(48) #1 Bleached Cup Stock (#1 Cup)
Consists of uncoated cuttings or sheets of coated or uncoated cup base stock. Cuttings with slight bleed may be included. Must be free of wax, poly, and other coatings that are insoluble.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed ½ of 1%

(49) #2 Printed Bleached Cup Stock (#2 Cup)
Consists of printed, untreated formed cups, cup die cuts, and misprint sheets of coated or uncoated cup base stock. Glues must be water soluble. Must be free of wax, poly, and other coatings that are insoluble.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed 1%

(50) Unprinted Bleached Plate Stock
Consists of groundwood-free bleached coated or uncoated, untreated and unprinted plate cuttings and sheets.
Prohibitive Materials: None permitted
Outthrows plus prohibitives may not exceed ½ of 1%
Specialty Grades

The grades listed below are produced and traded in carload and truckload quantities throughout the United States, and because of certain characteristics (i.e., the presence of wet strength, polycoatings, plastic, foil, carbon paper, hot melt glue), are not included in the regular grades of paper stock. However, it is recognized that many mills have special equipment and are able to utilize large quantities of these grades. Since many paper mills around the world do use these specialty grades, they are being listed with appropriate grade numbers for easy reference.

The Paper Stock Industries Chapter of ISRI is not establishing specific specifications, which would refer to such factors as the type of wet strength agent used, the percentage of wax, the amount of polycoating, whether it is on top of or under the printing, etc. The specification for each grade should be determined between Buyer and Seller, and it is recommended that purchase be made based on sample.

These specialty grades are as follows:

1—S  White Waxed Cup Cuttings
2—S  Printed Waxed Cup Cuttings
3—S  Poly Coated Cup Stock
4—S  Polycoated Bleached Kraft—Unprinted
5—S  Polycoated Bleached Kraft—Printed
6—S  Polycoated Milk Carton Stock
7—S  Polycoated Diaper Stock
8—S  Polycoated Boxboard Cuttings
9—S  Polycoated Boxboard Cuttings
10—S  Printed and/or Unprinted Bleached Sulphate Containing Foil
11—S  Waxed Corrugated Cuttings
12—S  Wet Strength Corrugated Cuttings
13—S  (This Number Not Currently in Use)
14—S  Beer Carton Scrap
15—S  Contaminated Bag Scrap
16—S  Insoluble Glued Free Sheet Paper and/or Board (IGS)
17—S  White Wet Strength Scrap
18—S  Brown Wet Strength Scrap
19—S  Printed and/or Colored Wet Strength Scrap
20—S  File Stock
21—S  (This Number Not Currently in Use)
22—S  Ruled White
23—S  Flyleaf Shavings Containing Hot Melt Glue
24—S  (This Number Not Currently in Use)
25—S  Books with Covers
26—S  (This Number Not Currently in Use)
27—S  (This Number Not Currently in Use)
28—S  (This Number Not Currently in Use)
29—S  (Not currently in use)
30—S  Plastic Windowed Envelopes
31—S  Textile Boxes
32—S  Printed TMP
33—S  Unprinted TMP
34—S  Manila Tabulating Cards
35—S  Sorted Colored Ledger
36—S  Computer Printout (CPO)

Guidelines for Plastic Scrap: P-2017

Baled Recycled Plastic Scrap
Commercial Guidelines

General Information
Commercial Guidelines for Baled Recycled Plastic Scrap were developed to provide industry-wide quality standards. These standards will facilitate commodity trading of these materials. They will also focus suppliers of such material on the quality requirements of their customers.

Product
These guidelines are designed with the potential for dealing with all recycled plastic in bale form. Initial specifications refer only to bottles. The code framework allows for generation of guidelines for all types of plastic packaging materials (including rigid and flexibles) with room for expansion to other plastic products and resins including those which are used to produce durable goods. Guidelines for those products may be added at a later date.

Bale Density
Bales shall be compressed to a minimum density of 10 pounds per cubic foot and a maximum density to be determined by individual contract between Buyer and Seller. Increased density may improve transportation efficiency, but over-compression may adversely affect the ability of a Buyer to separate, sort, and reprocess the material.

Bale Tying Material
Bale wires, ties, or straps shall be made of non-rusting or corroding material.

Bale Integrity
Bale integrity must be maintained through loading, shipping, handling, and storage. Distorted or broken bales are difficult to handle. They are unacceptable and may result in downgrading, rejection, or charge back.

Allowable Contamination
Unspecified materials must not exceed 2% of total bale weight. Bales which contain over 2% will be subjected to reduction in the contracted price of the material as well as charges for disposal of the contaminants. The reduced percentage will vary depending upon the amount and type of contamination. Quality of the baled plastic is the primary factor which determines the value.

Prohibited Material
Certain materials are understood to be specified as “prohibited.” Such materials will render the bale “non-specification” and may cause some customers to reject the entire shipment. These may include plastic materials which have a deleterious effect on each other when reprocessed, and materials such as agricultural chemicals, hazardous materials, flammable liquids and/or their containers, and medical waste.

Liquids
Plastic containers/materials should be empty and dry when baled. The bale should be free of any free flowing liquid of any type.

General
Shipments should be essentially free of dirt, mud, stones, grease, glass, and paper. The plastic must not have been damaged by ultraviolet exposure. Every effort should be made to store the material above ground and under cover. A good faith effort on the part of the supplier will be made to include only rinsed bottles which have closures removed.

Definitions for Plastic Materials

Baled
Loose material that is compressed and bound together.

Densified
Material that is compressed through mechanical means. Typically applies to foam (purged) and film (turned into “popcorn”). Densified material is typically sent on for additional processing.

Durable Goods
Electrical and electronic equipment, appliances, automobiles (called “transportation equipment” in ISO 15270), construction products (included in ISO 15270) and industrial equipment (included in ISO 15270)

Flake
A generic term that refers to size and shape. Typically consists of plastic bottles or plastic film typically ground into a chip.

Installed
Material that has been purchased by a consumer and used for its original purpose. Such material may be scrap from the installation process. The material may have reached the end of its serviceable life and has been removed from service. In distribution center or worksite environments, the packaging has been opened and exposed to environmental conditions causing a higher likelihood of contamination. This material can also be categorized as “post-consumer.”

Mixed Load Plastic
Shredded plastic that contains various types of resins and requires mechanical sorting to reach final specification. Typically baled and not granulated. Types and grades included in the bale to be agreed to by buyer and seller.

Plastic Bottle
A rigid container which is designed with a neck that is smaller than the body. Normally used to hold liquids and emptied by pouring.

Plastic Film
A thin flexible sheet which does not hold a particular shape when unsupported.

Postconsumer
Products generated by a business or consumer that have served their intended end use and have been separated or diverted from the solid waste stream for the purpose of recycling.
Purge
Plastic that has been melted and has hardened. This material has no set shape or form.

Recovered Plastic
Plastic materials which have been recovered or diverted from the solid waste stream. Does not include materials generated from and commonly reused within an original manufacturing process.

Recycled Plastic
Plastics composed of either post-consumer or recovered material or both.

Regrind
A generic term that refers to hard rigid plastic typically ground into a chip. Typically consists of material that is the same grade, color and type. It can be used in extrusion or molding processes.

Rigid Plastic Container
A package (formed or molded container) which maintains its shape when empty and unsupported.

Shred
Size reduced material. The typical upper size can be between 3” to 12”, although in some cases the upper size can be as small as about 1”. Size range, characteristics should be agreed to between buyer and seller.

Shredded Plastic
Generic term. Material that contains a high plastic content. Typically contains 90% plastic content.

Shredder Residue
The remaining mixture after the majority of metals have been recovered from durable goods “shred.” The mixture can contain plastics, rubber, wood, glass, rocks, dirt, paper, film, textiles, wires and other metals missed during the metal recovery process. The predominant single material is often plastic, which can vary from about 15% to about 90% depending on the type of durable goods and the steps taken in the metal separation process. Size range, characteristics should be agreed to between buyer and seller.

Uninstalled
Can be found in multiple environments such as worksite, distribution centers or OEM facilities. The material has not been used due to a defect or other circumstance. It can be obsolete or surplus material. Material is that recovered from the distribution chain can also be categorized as “post-consumer.” Material recovered before the distribution chain can be categorized as “pre-consumer.”

Common issues for this category:
The following list applies to all materials listed in this category.
Caps, enclosures, and labels are acceptable.
Product need not be washed, but preferred.

PET Bottles
Description: Any whole Polyethylene Terephthalate (PET, #1) bottle with a screw-neck top that contains the ASTM D7611 “#1, PET or PETE” resin identification code and that is clear, transparent green, or transparent light blue. All bottles should be free of contents or free flowing liquids and rinsed.

Product: PET Bottles
Source: Post-Consumer Material
Contamination: Please check with your pet buyer(s) as to their allowances for:
• Other Colored PET Containers
• PET Thermoforms, e.g., microwave trays, dishes, bakery trays, deli containers, clam shell containers, drink cups

*“PET fraction” refers to the total weight of PET bottles in a PET bale, inclusive of caps and labels when still attached to PET containers, as a percentage of the total weight of that bale.*

Including closures (caps, lids, and rings) on bottles is acceptable. Removal of closures is also acceptable.

Total contaminants should not exceed the percentages, by weight, as defined by PET bale grades in chart above.
• High-Density Polyethylene (HDPE, #2) Rigid Plastic Containers
• Low Density Polyethylene (LDPE, #4) Rigid Plastic Containers
• Polypropylene (PP, #5) Rigid Plastic Containers
• Aluminum
• Metal containers or cans
• Paper or cardboard
• Liquid residues, primarily water (2% maximum allowed)

The following contaminants are not allowed at any level (zero percent allowed)
• Polyvinyl Chloride (PVC, #3) in any form
• Chemically incompatible low temperature melting materials, including Polystyrene (PS, #6) plastic and PLA plastic, as rigid or foam in any product.
• Chemically compatible low temperature melting materials, such as PETG
• Any plastic bags or plastic film
• Wood, glass, oils and grease
• Rocks, stones, mud, dirt
• Medical and hazardous waste
• Items containing degradable additives

General: Refer to the General Information section for additional information.
HDPE Color Bottles

Description: Any whole, blow-molded, High-Density Polyethylene (HDPE, #2) bottle containing the ASTM D7611 “#2, HDPE” resin identification code that is pigmented and opaque, and was generated from a curbside, drop-off, or other public or private recycling collection program. All bottles should be free of contents or free flowing liquids and rinsed.

Product: Bottles Only.

Source: Post-Consumer material

Contamination: Total contaminants should not exceed the percentages, by weight, as defined by the HDPE bale grade chart listed below.

</tbody>
</table>

“HDPE Fraction” refers to the total weight of HDPE bottles in a HDPE bale, inclusive of caps and labels when still attached to HDPE containers, as a percentage of the total weight of that bale.

Including closures (caps, lids, and rings) on bottles is acceptable. Removal of closures is also acceptable.

No more than 2% of the following individual items are allowed:
- Polyethylene Terephthalate (PET, #1)
- Low Density Polyethylene (LDPE, #4)
- Polypropylene (PP, #5)
- Polystyrene (PS, #6)
- Other (#7)
- Liquid residues
- Aluminum
- Paper or cardboard

The following contaminants are not allowed at any level (zero percent allowed):
- Bulky rids
g- Any plastic with PLA or foaming agents
- Plastic bags or film
- Polyvinyl Chloride (PVC, #3) plastic in any form
- High-density Polyethylene (HDPE, #2) motor oil or other automotive fluid containers
- Metal
- Rocks, stones, mud, dirt
- Wood, glass, oils, grease
- Medical and hazardous waste

General: Refer to the General Information section for additional information.

Tubs and Lids

Description: Any whole Polypropylene (PP, #5), High-Density Polyethylene (HDPE, #2), and/or Low Density Polyethylene (LDPE, #4), container generated through a positive sort from curbside, drop-off or other public or private recycling collection program. Tubs are containers that have a neck or mouth similar in size to its base. Lids are caps for tubs that have a fastening feature other than threads. Examples include: yogurt cups, margarine tubs, ice cream tubs, cold drink cups (transparent, cold serve).

Product: Tubs and Lids

Source: Post-Consumer material generated from a curbside, drop-off, or other public or private recycling collection program.

Contamination: Total contaminants should not exceed 10% by weight

The following levels of contamination are allowed:
- 2% Maximum acceptable
  - Metal;
  - Paper/cardboard;
  - Injection-molded High-Density Polyethylene (HDPE, #2);
  - Polyethylene Terephthalate (PET, #1) Bottles or thermoforms;
  - Any plastic containers or packaging including Polyethylene Terephthalate (PET, #1), Polyvinyl Chloride (PVC, #3), Polystyrene (PS, #6), Other (#7);
  - Liquid/other residues.

The following contaminants are not allowed at any level (zero percent allowed):
- Any plastic bags, sheets, or film;
- Wood, glass, electronics scrap;
- Oils, grease, rocks, mud, dirt;
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides;
- Medical and hazardous waste;
- Products with degradable additives.

General: Refer to the General Information section for additional information.

Tubs and Lids w/Bulky Rigid Plastic

Description: Any whole Polypropylene (PP, #5), High-Density Polyethylene (HDPE, #2), and/or Low Density Polyethylene (LDPE, #4), container generated through a positive sort from curbside, drop-off or other public or private recycling collection program. Tubs are containers that have a neck or mouth similar in size to its base. Lids are caps for tubs that have a fastening feature other than threads. Bulky Rigid plastic is allowed. Examples include: yogurt cups, margarine tubs, ice cream tubs, cold drink cups (transparent, cold serve).

Product: Tubs and Lids

Source: Post-Consumer material generated from a curbside, drop-off, or other public or private recycling collection program.

Contamination: Total contaminants should not exceed 10% by weight

The following levels of contamination are allowed:
- 2% Maximum acceptable
  - Metal;
  - Paper/cardboard;
  - Injection-molded High-Density Polyethylene (HDPE, #2);
  - Polyethylene Terephthalate (PET, #1) Bottles or thermoforms;
  - Any plastic containers or packaging including Polyethylene Terephthalate (PET, #1), Polyvinyl Chloride (PVC, #3), Polystyrene (PS, #6), Other (#7);
  - Liquid/other residues. (cont.)
The following contaminants are not allowed at any level (zero percent allowed):  
- Any plastic bags, sheets, or film;  
- Wood, glass, electronics scrap;  
- Oils, grease, rocks, mud, dirt;  
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides;  
- Items with circuit boards or battery packs;  
- Medical and hazardous waste;  
- Products with degradable additives.

**General:** Refer to the General Information section for additional information.

### 1-7 Bottles and SMALL Rigid Plastic

**Description:** Rigid plastic generated in a positive sort from a curbside, drop-off, or other public or private recycling program that does not separately sort any plastic bottles. Bales consist of all plastic bottles—no bottles should be removed from the mix prior to baling—and household containers (including thermoform packaging, cups, trays, clamshells, food tubs and pots).

- Bulky rigid plastic, greater than 5 gallons, should be avoided (e.g., drums, crates, buckets, baskets, toys, totes and lawn furniture);
- Bales should consist of 65% bottles.

**Product:** Bottle and non-bottle Containers

**Source:** Post-Consumer Material

**Contamination:** Total contaminants should not exceed 5% by weight
- 2% maximum acceptable  
  - Paper/cardboard
- 1% maximum acceptable  
  - Metal  
  - Plastic bags, sheets, film  
  - Liquid or other residues

The following contaminants are not allowed at any level (zero percent allowed):  
- Wood, glass, electronics scrap  
- Oils, grease, rocks, mud, dirt  
- Items with circuit boards or battery packs  
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides.  
- Medical and hazardous waste  
- Products with degradable additives

**General:** Refer to the General Information section for additional information.

### 3-7 Bottles and SMALL Rigid Plastic

**Description:** Rigid plastic items generated in a positive sort from a curbside, drop-off, or other public or private recycling programs from which the Polyethylene Terephthalate (PET, #1) and High-Density Polyethylene (HDPE, #2) bottles have been removed. Pre-picked plastic consists of non-PET and non-HDPE household bottles and all non bottle containers including thermoform packaging, cups, trays, clamshells, food tubs and pots, and all large rigid plastics, primarily Polyethylene and Polypropylene (PP, #5) (includes plastic crates, carts, buckets, baskets and plastic lawn furniture). Metal, as typically found in toys or bucket handles, should be removed when possible. Plastic items from construction or demolition should not be included in Pre-Picked bales.

- Bulky rigid plastic, greater than 5 gallons, should be avoided (e.g., drums, crates, buckets, baskets, toys, totes and lawn furniture)

**Product:** Bottle and non-bottle Containers

**Source:** Post-Consumer Material

**Contamination:** Total contaminants should not exceed 5% by weight
- 2% maximum acceptable  
  - Metal  
  - Paper/cardboard (2% maximum acceptable)
- 1% maximum acceptable  
  - Liquid or other residues (1% maximum acceptable)

The following contaminants are not allowed at any level (zero percent allowed):  
- Any plastic bags, sheets, or film  
- Wood, glass, electronics scrap  
- Oils, grease, rocks, mud, dirt  
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides.  
- Items with circuit boards or battery packs  
- Medical and hazardous waste  
- Products with degradable additives

**General:** Refer to the General Information section for additional information.

### MRF Film

**Description:** Film collected and sorted at a MRF, typically generated from curbside collections consisting of HDPE grocery/retail bags, LDPE, or LLDPE films.

**Product:** Film

**Contamination:** Contaminants not to exceed 10% of loose paper, rigid plastics, non-ethylene film

**Prohibited Items:** NO food, trash, cans, glass, wood, oil, rocks, liquids, PET plastics, or PVC plastics.

**General:** Refer to the General Information section for more information.
Guidelines for Plastic Scrap

HDPE Natural Bottles

Description: Any whole, blow-molded, High-Density Polyethylene (HDPE, #2) containing the ASTM D7611 "#2, HDPE" resin identification code that is unpigmented, and was generated from a curbside, drop-off or public or private collection program. All bottles should be free of contents or free flowing liquids and rinsed.

Product: Bottles only

Source: Post-Consumer material

Contamination: Total contaminants should not exceed the percentages, by weight, as defined by the HDPE bale grade chart listed below.

“HDPE Fraction” refers to the total weight of HDPE bottles in a HDPE bale, inclusive of caps and labels when still attached to HDPE containers, as a percentage of the total weight of that bale

Including closures (caps, lids, and rings) on bottles is acceptable. Removal of closures is also acceptable. No more than 2% of the following individual items are allowed:

- Non-dairy pigmented High-Density Polyethylene (HDPE, #2) Bottles;
- Paper or Cardboard;
- Any other non-HDPE rigid plastic container;
- Liquid Residues;
- Packaging, including Polyethylene Terephthalate (PET, #1), Low Density Polyethylene (LDPE, #4);
- Aluminum
- Polypropylene (PP, #5), Polystyrene (PS, #6), Other (#7)
- Injection-molded High-Density Polyethylene (HDPE, #2) based cups, tubs, other wide-mouthed containers or non-bottle High-Density Polyethylene (HDPE, #2) materials.

The following contaminants are not allowed at any level (zero percent allowed)

- Pigmented white and yellow High-Density Polyethylene (HDPE, #2) milk jugs
- Bulky Rigid
- Any Plastics with PLA or Foaming Agents
- Wood, glass, oils, grease
- Rocks, Stones, Mud, Dirt
- Medical and Hazardous Waste
- Any plastic bags or film from any resin PVC (#3) in any form
- Metal

General: Refer to the General Information section for additional information

Mixed Bulky Rigs

Description: Any large rigid High-Density Polyethylene (HDPE, #2) and/or Polypropylene (PP, #5) plastic bulky item, created through a positive sort from curbside, drop-off or other public or private recycling collection program. Examples include: crates, buckets, baskets, totes, and lawn furniture. Metal such as axels and bolts should be removed. Buckets/pails with metal handles can be included.

Product: Bulky Rigid Plastic

Source: Post-Consumer material created from a positive sort from a curbside, drop-off or other public or private recycling collection program.

Contamination: This bale should not contain mixed #1-7 bottles or containers, toys with metal, drums, jugs (either HMW or 55 gallons) or Polyvinyl Chloride (PVC, #3).

Total allowed - 15% by weight.

- Any plastic items or packaging including Polyethylene Terephthalate (PET, #1), Polyvinyl Chloride (PVC, #3), Polystyrene (PS, #6) #7 Other (4% maximum acceptable);
- Metal (2% maximum acceptable);
- Liquid/other residues (2% max. acceptable);
- Wood (2% max);
- Paper/cardboard (2% maximum acceptable);
- Any plastic bags, sheets or film (2% max);
- Glass (2% max).

The following items are not allowed at any level (0% allowed):

- Oils, grease, rocks, mud, dirt;
- PS Foam and any other types of foam;
- Medical and hazardous waste;
- Products with degradable additives;
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides;
- Electronics scrap and items with circuit boards or battery packs;

General: Refer to the General Information section for more information

PET Thermoforms

Description: Any whole Polyethylene Terephthalate (PET, #1) package labeled with the ASTM D7611 “#1, PET or PETE” resin identification code including and not limited to egg cartons, baskets, clamshell containers, cups, lids, cake domes, covers, blister pack without paperboard backing, tubs, deli containers, trays and folded PET sheet containers. All packages should be free of contents or free flowing liquids and rinsed. This grade does not include bottles and jars.

Product: PET Thermoform Plastic

Source: Post-Consumer material

Contamination: Including closures (caps, lids, and rings) on bottles is acceptable. Removal of closures is also acceptable.

Total contaminants should not exceed 5% by weight.

No more than 2% by weight of any of following individual contaminants will be allowed:

- Aluminum
- Metal containers or cans
- Loose paper or cardboard (cont.)
• Polystyrene
• PLA
• PVC
• PETG
• Liquid residues, primarily water (2% maximum allowed).

The following contaminants are not allowed at any level (zero percent allowed):
• Any plastic bags or plastic film
• Wood, glass, oils and grease
• Rocks, stones, mud, dirt
• Medical and hazardous waste
• Items containing degradable additives

General: Refer to the General Information section for additional information.

HDPE Injection Bulky Rigid Plastics
Description: Any injection grade #2 HDPE, typically found to be wide mouthed containers and/or oversized items generated through a positive sort from curbside, drop-off or other public or private recycling collection program. Examples include: carts, crates, buckets, baskets, lawn furniture, etc. Metal such as axels and bolts should be removed. Buckets/pails with metal handles are acceptable.

Product: Buckets, Pails, Oversized Rigid Plastics
Source: Post-Consumer Material

Contamination: The following levels of contamination are allowed
• 10% maximum acceptable
  o Polypropylene (PP, #5)
• 4% maximum acceptable
  o Polyethylene Terephthalate (PET, #1) plastics
  o Polyvinyl Chloride (PVC, #3) plastics
  o Low Density Polyethylene (LDPE, #4) plastics
  o Polystyrene (PS, #6) plastics
  o Other (#7)
• 2% maximum acceptable
  o Metal
  o Liquid or other residue
  o Paper/cardboard

The following contaminants are not allowed at any level (zero percent allowed):
• Plastic bags, sheets, film
• Oil, grease, rocks, dirt
• Wood
• Glass
• Electronic scrap
• Medical and hazardous waste
• Products with degradable additives
• Containers which held flammable, corrosive or reactive products, pesticides or herbicides

General: Refer to the General Information section for additional information.

Polypropylene SMALL Rigid Plastics
Description: Any Polypropylene (PP, #5) whole bottle, container product, generated through a positive sort from curbside, drop-off or other public or private recycling collection program. Examples include: prescription bottles, yogurt cups, margarine tubs, ice cream tubs, cold drink cups, microwaveable trays, tofu tubs, dishwasher safe storage containers, hangers, bottle cap enclosures, etc.

• Bulky Polypropylene (PP, #5) plastic items greater than 5 gallons, should be avoided (e.g., drums, crates, buckets, baskets, toys, totes, and lawn furniture).

Product: Polypropylene Containers
Source: Post-Consumer Material

Contamination: Total contaminants should not exceed 8% by weight
The following levels of contamination are allowed
• 2% Maximum acceptable
  o Metal
  o Paper/Cardboard
  o Liquid or other residue
  o High-Density Polyethylene (HDPE, #2)
  o Any plastic container or packaging containing Polyethylene Terephthalate (PET, #1), Polyvinyl Chloride (PVC, #3), Polystyrene (PS, #6), Other (#7)

The following contaminants are not allowed at any level (zero percent allowed):
• Plastic bags, sheets, film
• Oil, grease, rocks, dirt
• Wood
• Glass
• Electronic scrap
• Medical and hazardous waste
• Products with degradable additives
• Containers which held flammable, corrosive or reactive products, pesticides or herbicides

General: Refer to the General Information section for additional information.

Polypropylene All Rigid Plastics
Description: Any Polypropylene (PP, #5) whole bottle, container product, generated through a positive sort from curbside, drop-off or other public or private recycling collection program. Bulky Polypropylene (PP, #5) are items greater than 5 gallons, (e.g., buckets, crates, waste baskets, toys, and storage bins).

Examples include: prescription bottles, yogurt cups, margarine tubs, ice cream tubs, cold drink cups, microwaveable trays, tofu tubs, dishwasher safe storage containers, hangers, bottle cap enclosures, etc.

Product: Polypropylene Containers
Source: Post-Consumer Material

Contamination: Total contaminants should not exceed 8% by weight
The following levels of contamination are allowed
• 2% Maximum acceptable
  o Metal
  o Paper/Cardboard
  o Liquid or other residue
Guidelines for Plastic Scrap

- High-Density Polyethylene (HDPE, #2)
- Any plastic container or packaging containing Polyethylene Terephthalate (PET, #1), Polyvinyl Chloride (PVC, #3), Polystyrene (PS, #6), Other (#7)

The following contaminants are not allowed at any level (zero percent allowed):
- Plastic bags, sheets, film
- Oil, grease, rocks, dirt
- Wood, glass, electronic scrap
- Medical and hazardous waste
- Products with degradable additives
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides

General: Refer to the General Information section for additional information.

1-7 Bottles and ALL Rigid Plastic

Description: Rigid plastic generated in a positive sort from a curbside, drop-off, or other public or private recycling program that does not separately sort any plastic bottles. Bales consist of all plastic bottles—no bottles should be removed from the mix prior to baling—and household containers (including thermoform packaging, cups, trays, clamshells, food tubs and pots, and bulky rigid plastic (e.g., drums, crates, buckets, baskets, toys, totes and lawn furniture).

Product: Bottle and non-bottle containers

Source: Post-Consumer Material

Contamination: The following levels of contamination are allowed
- 5% Maximum acceptable
  - Metal (2% maximum acceptable)
  - Paper/cardboard (2% maximum acceptable)
  - Liquid or other residues (1% maximum acceptable)

The following contaminants are not allowed at any level (zero percent allowed):
- Any plastic bags, sheets, or film
- Wood, glass, electronics scrap
- Oils, grease, rocks, mud, dirt
- Containers which held flammable, corrosive or reactive products, pesticides or herbicides.
- Items with circuit boards or battery packs
- Medical and hazardous waste
- Products with degradable additives

General: Refer to the General Information section for additional information.

PE Retail Mix Film

Description: Any polyethylene bag and overwrap accepted by retailers from their customers or polyethylene stretch wrap or other film generated back of house may be included. Bags may be mixed color or printed and primarily High-Density Polyethylene (HDPE, #2) but are expected to include other polyethylene bags and LDPE/LLDPE overwrap. Films may be coded with ASTM D7611 resin identification code "#2, HDPE" and #4, LDPE". All bag bundles should be free of free-flowing liquids.

Product: Mixed Film

Source: Post-Consumer Material

Contamination: Total contaminants should not exceed 5% by weight.
- Non-polyethylene other plastics;
- Loose Paper;
- Strapping, twine or tape;
- Liquid residue (2% maximum).

The following contaminants are not allowed at any level (zero percent allowed):
- Medical and hazardous waste;
- Food waste;
- Wood;
- Glass;
- Oils and Grease;
- Rocks, stones, mud, dirt;
- Metallized labels or films;
- Multi-material pouches;
- Silicone coated film;
- Film with o xo or bio-degradable additives;
- PVDC layers;
- Acrylic coatings;

General: Refer to the General Information section for additional information.
**LDPE Colored Film**

**Description:** Any mixture of natural translucent Low Density Polyethylene (LDPE, #4) film and mixed color translucent Low Density Polyethylene (LDPE, #4) film with limited label contamination is acceptable. Films may be coded with ASTM D7611 resin identification code #4, LDPE. All film bundles should be free of free-flowing liquids.

**Product:** LDPE Colored Film

**Source:** Post-Consumer material

**Contamination:** Total contaminants should not exceed 2% by weight. No more than 2% by weight of any of following individual contaminants will be allowed:
- Non-polyethylene other plastics;
- Labels;
- Water.

The following contaminants are not allowed at any level (zero percent allowed):
- Medical and hazardous waste
- Wood
- Glass
- Oils and Grease
- Rocks, stones, mud, dirt
- Metallized labels or films
- Multi-material pouches
- Silicone coated film
- Film with oxo or bio-degradable additives
- PVDC layers

**General:** Refer to the General Information section for additional information.

**LDPE Furniture Mix**

**Description:** Any mixture of natural Low Density Polyethylene (LDPE, #4) film used for sofa overwrap, bubble wrap, mattress bag and Linear Low Density Polyethylene (LLDPE, #4) stretch film and polyethylene thin foam which is white and gray foam backed with LDPE film. Color contribution can only be from the white foam, gray foam backed with LDPE film, and blue mattress bags. The mass shall consist of 70% to 80% LDPE and/or LLDPE films and the remainder polyethylene foam. Films may be coded with ASTM D7611 resin identification code #4, LDPE. All film bundles should be free of free-flowing liquids.

**Product:** LDPE or LLDPE Film

**Source:** Post-Consumer material

**Contamination:** Total contaminants should not exceed 2% by weight. No more than 2% by weight of any of following individual contaminants will be allowed:
- Non-polyethylene other plastics;
- Labels;
- Water.

The following contaminants are not allowed at any level (zero percent allowed):
- Medical and hazardous waste
- Wood
- Glass
- Oils and Grease
- Rocks, stones, mud, dirt
- Metallized labels or films
- Multi-material pouches
- Silicone coated film
- Film with oxo or bio-degradable additives
- PVDC layers

**General:** Refer to the General Information section for additional information.

**PE Clear Film**

**Description:** Any mix of natural polyethylene, High-Density Polyethylene (HDPE, #2), Low Density Polyethylene (LDPE, #4) or Linear Low Density Polyethylene (LLDPE, #4) film, totaling at least 95% clear or natural polyethylene film is accepted. Films may be coded with ASTM D7611 resin identification code.

**Product:** Polyethylene film

**Source:** Post-Consumer or Post-Commercial material

**Contamination:** Total contaminants should not exceed 5% by weight.
- Pigmented polyethylene films
- Non-polyethylene other plastics such as strapping
- Labels,
- Liquid residue (2% maximum).

The following contaminants are not allowed at any level (zero percent allowed):
- Medical and hazardous waste
- Wood
- Glass
- Oils and Grease
- Rocks, stones, mud, dirt
- Metallized labels or films
- Multi-material pouches
- Silicone coated film
- Film with oxo or bio-degradable additives
- PVDC layers
- Acrylic coatings

**General:** Refer to the General Information section for additional information.

**Agricultural Greenhouse Film**

Films not used on the ground for agriculture or farming. Examples of which may be bale wrap, greenhouse films, dairy bags and bunker silo films which are polyethylene based.

**Product:** Film

**Contamination:** Contaminants not to exceed 20% of non-PE film, dirt, rocks, or moisture.

**Prohibited Items:** NO food, trash, cans, glass, wood, or oil

**General:** Refer to the General Information section for more information.

---

**PE Clear Film Description Variances**

<table>
<thead>
<tr>
<th>Grade B</th>
<th>Grade C</th>
</tr>
</thead>
<tbody>
<tr>
<td>80% clear, up to 20% color, clean and Natural LDPE and/or LDPE films.</td>
<td>50% clear, 50% color, dry, LDPE or LLDPE Films</td>
</tr>
</tbody>
</table>
Agricultural Ground Cover Film
Any film collected after in field use. Examples of which may be mulch film and irrigation (drip) tubing which is polyethylene based.
Product: Film
Contamination: Contaminants not to exceed 50% of non-PE Film, dirt, rocks, or moisture.
Prohibited Items: NO food, trash, cans, glass, wood or oil.
General: Refer to the General Information section for more information.

Post-Consumer TPO Plastic Automotive Bumper Covers
Description: This grade consists of painted auto bumper covers removed from motor vehicles.
Product: Post-Consumer Auto Part
Source: Post-Consumer material generated by collision or refurbishment centers or automobile dismantlers.
Contamination: The following parts must be removed from the bumper cover: head lamps, tail lamps, grills, emblems, rub strips, reflectors, and any other components attached to the bumper. Everything attached to the bumper cover should be removed before baling. Contamination should be limited to small metal parts such as clips, bolts, and screws.
No TPU or RIM Plastic allowed.
General: Refer to the “General Information” section for more information.

Rigid PVC—Siding
Description: Typically consists of PVC siding used in residential applications. May contain PVC downspouts. Not all siding is PVC and may contain PE variants, which are typically molded. Recyclability and market value increases with additional color segregation.
Product: PVC Bale
Source: Installed or Uninstalled Material
Technical Information: Hardness Level > 65D. Rigid PVC does not contain plasticizer and will typically measure above 65 on the Shore D scale.
Explanation of the Shore Scale: Shore durometer measurement devices can be used to measure the indentation of a prescribed needle into the material. The test method conforms to ASTM D2240.
Contamination:
Prohibitives—Material not accepted at any level, 0% allowed.
  a. CPVC (typically gray electrical conduit)
  b. PET plastic of any form
  c. Medical and hazardous waste
  d. Lead or cadmium stabilized rigid PVC materials,
  e. Materials containing asbestos fillers or reinforcement.
  f. Used household soil or waste plumbing lines with visible bioresidue. (May have debris and paper)
  g. ABS

Contamination material allowed at small percentages:
  a. Plastics other than PVC such as HDPE, LDPE, PP, PS
  b. Foamed PVC
  c. Liquids
  d. Paper & Cardboard
  e. Ferrous and Non-Ferrous Metals
  f. Rocks, Stones, Mud, Dirt
  g. Wood, Glass, Oils, Grease

General: Refer to the General Information section for additional information.

Rigid PVC—Window Profiles
Description: Typically consists of window and door frames. Sourced primarily from door and window manufacturers.
Product: PVC Bale
Source: Installed or Uninstalled Material
Technical Information: Hardness Level > 65D. Rigid PVC does not contain plasticizer and will typically measure above 65 on the Shore D scale.
Explanation of the Shore Scale: Shore durometer measurement devices can be used to measure the indentation of a prescribed needle into the material. The test method conforms to ASTM D2240.
Contamination:
Prohibitives—Material not accepted at any level, 0% allowed.
  a. Loose rubber weather stripping
  b. Glass
c. Metal
d. PET plastic of any form
e. Medical and hazardous waste
f. Lead or cadmium stabilized rigid PVC materials,
g. Materials containing asbestos fillers or reinforcement.
h. Used household soil or waste plumbing lines with visible bioresidue. (May have debris and paper)
i. CPVC—should be separated and marketed separately—typically includes pipe and molded fittings and runners;

Contamination material allowed at small percentages:

h. Plastics other than PVC such as HDPE, LDPE, PP, PS
i. Foamed PVC
j. Liquids
k. Paper & Cardboard
l. Ferrous and Non-Ferrous Metals
m. Rocks, Stones, Mud, Dirt
n. Wood, Glass, Oils, Grease

**General:** Refer to the General Information section for additional information.

Guidelines for Electronics Scrap: ES-2017

Electronics Scrap

Commercial Guidelines for Electronics Scrap were developed to provide industry-wide quality standards. These standards will facilitate commodity transactions domestically and internationally. Transactions covering shipments to or from other countries may be in accordance with these standards and may be modified by mutual agreement between Buyer and Seller.

Electronic Scrap Definitions

The following E-Recycling definitions will facilitate a more consistent language for both domestic as well as international transactions.

“END-OF-LIFE ELECTRONIC PRODUCTS”

EOL Electronic Products are either obsolete for their intended purpose or no longer useful by the current user and lack any significant market value as an operational unit. These products are represented by any of the following categories of electronic products:

IT and telecommunication electronic equipment including:

- Centralized data processing:
  - Mainframes
  - Minicomputers
  - Printer units
- Personal computing:
  - Personal computers (CPU, mouse, screen and keyboard included)
  - Laptop computers (CPU, mouse, screen and keyboard included)
  - Notebook computers
  - Notepad computers
- Printers
- Copying equipment
- Electrical and electronic typewriters
- Pocket and desk calculators
- Other products and equipment for the collection, storage, processing, presentation or communication of information by electronic means

User terminals and systems
- Facsimile
- Telex
- Telephones
- Pay phones
- Cordless telephones
- Cellular telephones
- Answering systems
- Other products or equipment for transmitting sound, images or other information by telecommunications

Consumer electronic equipment including:

- Radio sets
- Television sets
- Video cameras
- Video recorders
- Eli-h recorders
- Audio amplifiers
- Musical instruments and other products or equipment for the purpose of recording or reproducing sound or images, including signals or other technologies for the distribution of sound and image by telecommunications

Toys, leisure and sports electronic equipment including:

- Electric trains or car racing sets
- Hand-held video game consoles
- Video games
- Computers for biking, diving, running, rowing, etc.
- Sports equipment with electric or electronic components
- Coin slot machines

Medical devices (except all implanted and infected products and radioactive components) including:

- Radiotherapy equipment
- Cardiology
- Dialysis
- Pulmonary ventilators
- Nuclear medicine
- Laboratory equipment or in-vitro diagnostics
- Analyzers
- Freezers
- Fertilization tests
- Other appliances for detecting, preventing, monitoring, treating, or alleviating illness, injury or disability

Monitoring and control instruments including:

- Smoke detectors
- Heating regulators
- Thermostats
- Measuring, weighing or adjusting appliances for household or as laboratory equipment
- Other monitoring and control instruments used in industrial installations (e.g. Ira control panels)

“E-Recycling”

E-Recycling is any process by which End-of-Life (EOL) electronic products which would otherwise become solid waste are collected, separated, reused or processed and returned to use in the form of raw materials or products.

“E-Demanufacturing”

Demanufacturing is the process of separating EOL electronic products (electronic materials) into metallic and non-metallic parts that can be reused or recycled.

“E-Dismantler”

Dismantler is a person who engages in the manual demanufacturing of EOL electronic products (electronic materials) to reuse or recycle components and commodities contained within.
**Electronics Scrap Metals—EM**

Preface: The following metals specifications are directed to processing plants generating value-added commodities for consumers producing metal products. All the specifications below are subject to final terms and conditions as agreed between buyer and seller.

**EM1—Eddy-Current (EC) Aluminum**
Shall consist of the shredded aluminum fraction generated by EC separation of electronic products being predominately aluminum. Bulk density to be a minimum of 30 pounds per cubic foot (subject to terms between buyer and seller). Material may contain agreed-upon amounts of zinc and copper but shall not contain more than a total 5% maximum of nonmetals, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material and any sealed or pressurized items. Any variation to be sold by special arrangement between buyer and seller. Note: Refer to ISRI nonferrous specifications for Tweak or Twitch.

**EM2—Eddy-Current (EC) Scrap**
Shall consist of a combination of nonferrous metals that should be predominately aluminum but may contain statistically significant percentages of zinc or other nonferrous metals. Bulk density to be a minimum of 30 pounds per cubic foot and subject to terms between buyer and seller. Material to be bought/sold under this guideline shall be identified as EM2 with a number to follow indicating the estimated percentage of nonferrous metal (e.g., EM2-90 means the material contains approximately 90% nonferrous metal content). May also be screened to permit description by specific size ranges. Note: Refer to ISRI nonferrous specification for Zorba.

**EM3—Eddy-Current (EC) Scrap**
Shall consist of shredded circuitboards from end-of-life electronic processing systems. May also contain other nonmetallics, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material and any sealed or pressurized items. Any variation to be sold by special arrangement between buyer and seller. Note: Specifications for clean aluminum scrap produced by demanufacturing or pretreating EOL scrap prior to shredding can be found under ISRI Guidelines for Nonferrous Scrap. For aluminum streams that contain less than 85% aluminum, consult the general aluminum scrap specifications.

**EM4—Light Iron**
Shall consist of whole No. 1 and whole No. 2 wrought iron and/or steel scrap and No. 1 busheling from the manual dismantling of electronic products. Refer also to 200, 204, and 207 Guidelines for Ferrous Scrap.

**EM5—Iron Frag**
Shall consist of shredded No. 1 and No. 2 wrought iron and/or steel scrap and No. 1 busheling from the manual dismantling of electronic products. May also contain other nonmetallics, of which no more than 1% shall be rubber and plastics. To be free of excessively oxidized material and any sealed or pressurized items. Any variation to be sold by special arrangement between buyer and seller. Note: Specifications for clean aluminum scrap produced by demanufacturing or pretreating EOL scrap prior to shredding can be found under ISRI Guidelines for Nonferrous Scrap. For aluminum streams that contain less than 85% aluminum, consult the general aluminum scrap specifications.
size will be determined by contract between shipper and smelter or treatment facility.

**Panel Glass** (minimal or lead free) for multiple uses including construction, sand blasting, art glass, etc. May or may not be cleaned prior to shipment. Particle size will be determined by contract between shipper and receiving facility.

Clean Panel Glass with metal oxide concentrations of less than 5 ppm, free of coatings.

**Electronics Scrap Plastics**

### Applicable to all Specs:

- All specifications are subject to final terms and conditions as agreed to between the buyer and the seller.
- Plastic should not contain hazardous materials, medical waste or free-flowing liquid.
- Contamination includes: painted/coated; laminated; metals; dirt; and wood.

### Baled Specs:

**Baled CRT TV Plastic**
- From disassembled CRT TVs
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Light Colored CRT Monitor Plastic**
- From disassembled light colored (white, beige) CRT monitors
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Dark Colored CRT Monitor Plastic**
- From disassembled dark (black, dark grey) colored CRT monitors
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Dark Colored Flat Panel Monitor Plastic**
- From disassembled dark (black, dark grey) colored LED and LCD monitors
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Dark Colored Printer Plastic**
- From disassembled dark (black, dark grey) colored printers
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Light Colored Printer Plastic**
- From disassembled light (white, beige) colored printers
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Dark Colored Mixed Electronics Plastic**
- From disassembled dark (black, dark grey) mixed electronics equipment
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Light Colored Copier Plastic**
- From disassembled light (white, beige) colored copiers
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Dark Colored Copier Plastic**
- From disassembled dark (black, dark grey) colored copiers
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Light Colored Mixed Electronics Plastic**
- From disassembled light colored (white, beige) electronics equipment
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Baled Mixed Color Electronics Plastic**
- From disassembled mixed (all colors) colored electronics equipment
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Shredded Specs:**

**Shredded CRT TV Plastic**
- From shredded or disassembled TVs
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Shredded Light Colored CRT Monitor Plastic**
- From shredded or disassembled light (white, beige) colored monitors
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Shredded Dark CRT Monitor Plastic**
- From shredded or disassembled dark (black, dark grey) colored monitors
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Shredded Dark Electronics Plastic**
- From shredded or disassembled dark (black, dark grey) colored electronics equipment
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Shredded Light Electronics Plastic**
- From shredded or disassembled light (white, beige) colored electronics equipment
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight

**Shredded Mixed Color Electronics Plastic**
- From shredded or disassembled mixed (all colors) colored electronics equipment
- 36,000 +/- pounds per 40 ft. HC or tractor trailer
- Maximum Contamination < or = 2.0% by weight
Guidelines for Tire Scrap: TS-2017
Rubber From Scrap Tires

General Guidelines
Items not covered in the specifications, and any variations in the specification are subject to special arrangement between Buyer and Seller. Percentages listed below are by weight.

Definitions
Fines consist of materials that pass a 4.75 mm sieve. These materials may include rubber, fiber, inorganic and organic matter, dirt, and other non-tire materials.

Sizes will be determined by sieving. Suitable sieve sizes will be selected. Nest the sieves in order of decreasing size of opening from top to bottom and place the sample on the top sieve. Agitate the sieves by hand or by mechanical apparatus for a sufficient period so that additional sieving does not result in substantial additional material passing through the sieves.

TDM refers to tire-derived material.

Rubber Primarily Used for Civil Engineering

TDM 2–A
All material must be smaller than 4";
- at least 90% must be smaller than 2/32";
- at least 50% must be larger than 1/8";
- at least 90% must be larger than 1/4";
- maximum of ½" protrusion of steel; and
- maximum of 1% fines.

TDM 2–B
All material must be smaller than 4";
- at least 90% must be smaller than 2/32";
- at least 50% must be larger than 1/16";
- at least 90% must be larger than 1/8";
- at least 90% must not exceed 1" protrusion of steel; and
- maximum of 5% fines.

TDM 2–C
All material must be smaller than 4";
- at least 90% must be smaller than 2/32";
- at least 50% must be larger than 1/16";
- at least 90% must be larger than 1/8";
- and maximum of 5% fines.

TDM 3–A
At least 90% must be smaller than 4";
- at least 75% must be larger than 1/8";
- at least 90% must be larger than 1/4";
- maximum of 4" protrusion of steel; and
- maximum of 1% fines.

TDM 3–B
At least 90% must be smaller than 4";
- at least 75% must be larger than 1/8";
- at least 90% must be larger than 1/4";
- at least 90% must not exceed 1" protrusion of steel; and
- maximum of 5% fines.

TDM 3–C
At least 90% must be smaller than 4";
- at least 75% must be larger than 1/8";
- at least 90% must be larger than 1/4"; and
- maximum of 5% fines.

TDM 5–A
All material must be smaller than 8";
- at least 90% must be smaller than 6";
- at least 50% must be larger than 3";
- at least 90% must be larger than 1/2";
- maximum of 1" protrusion of steel; and
- maximum of 5% fines.

TDM 5–B
All material must be smaller than 8";
- at least 90% must be smaller than 6";
- at least 50% must be larger than 3";
- at least 90% must be larger than 1/2";
- at least 90% must not exceed 2" protrusion of steel; and
- maximum of 5% fines.

TDM 5–C
All material must be smaller than 8";
- at least 90% must be smaller than 6";
- at least 50% must be larger than 3";
- at least 90% must be larger than 1/2"; and
- maximum of 5% fines.

TDM 8–A
At least 90% must be smaller than 12";
- at least 75% must be smaller than 8";
- at least 50% must be larger than 3";
- at least 75% must be larger than 1/2";
- maximum of 2" protrusion of steel; and
- maximum of 1% fines.

TDM 8–B
At least 90% must be smaller than 12";
- at least 75% must be smaller than 8";
- at least 50% must be larger than 3";
- at least 75% must be larger than 1/2";
- at least 90% must not exceed 2" protrusion of steel; and
- maximum of 5% fines.

TDM 8–C
At least 90% must be smaller than 12";
- at least 75% must be smaller than 8";
- at least 50% must be larger than 3";
- at least 75% must be larger than 1/2"; and
- maximum of 5% fines.

TDM 12–A
At least 90% must be smaller than 18";
- at least 50% must be larger than 6";
- at least 75% must be larger than 1/2";
- maximum of 2" protrusion of steel; and
- maximum of 1% fines.

TDM 12–B
At least 90% must be smaller than 18";
- at least 50% must be larger than 6";
- at least 75% must be larger than 1/2";
- at least 90% must not exceed 2" protrusion of steel; and
- maximum of 5% fines.

TDM 12–C
At least 90% must be smaller than 18";
- at least 50% must be larger than 6";
- at least 75% must be larger than 1/2"; and
- maximum of 5% fines.
Scrap Specifications Circular 2017
Guidelines for Metals Transactions

These Guidelines are intended as a reference to assist members in carrying out their business obligations in a manner consistent with accepted industry practices. While the Guidelines are not obligatory, it is suggested that potential problems and misunderstandings may often be avoided by following these recommended procedures, in conjunction with ISRI’s scrap descriptions.

At times, the respective parties to a transaction may be unaware of the differences in trading practices of the other party. This diversity of interpretation often leads to misunderstandings, disputes, and in some instances expensive lawsuits. It is with the objective of providing members the means of avoiding such friction that ISRI has published these Guidelines, which are based on those practices most common and current in the industry.

On those points where it is impractical to provide recommendations, it is advised that the points be mutually agreed upon by the parties involved.

**Part I: Guidelines for Contracts**

A contract is an agreement between two or more parties to perform a legally enforceable act.

Therefore, all contracts should be in writing and set forth in **specific** terms. Before signing a contract, one should carefully read and understand all terms of it. No discrepancies or ambiguities should exist at the time the contract is executed. If you receive a contract with terms that are objectionable, you should immediately notify the other party in writing of your objections. An attorney should be consulted when legal advice is needed.

It should be kept in mind that if a dispute arises under a contract, and a court is called in to interpret its terms, certain general rules will be applied. First, contracts will be construed as a “whole,” and specific clauses will be subordinated to the contract’s general intent. Second, the courts will construe words according to their “ordinary” meaning unless it is clearly shown that they were meant to be used in a technical sense. Also, where provisions appear to be inconsistent, the courts will determine whether some of the provisions are printed (indicating a form contract), as compared to others which are written or typed. The latter kinds of provisions will prevail.

It should be remembered that where you and a Buyer (or Seller) have reached verbal agreement on a transaction, your failure to sign and return a contract which is sent to you in confirmation of that verbal agreement may not relieve you of the obligations of the terms and conditions enumerated in that contract.

**These Guidelines were developed to cover routine transactions.** It is essential that any unusual arrangements must be completely spelled out in a contract. With these factors in mind, the following list of items is enumerated as a **Checklist** for you to follow, either in the construction of a contract, or for the review of another party’s contract proposal. We cannot overemphasize the need for accuracy and specificity.

**Checklist Items**

(**BE SPECIFIC AT ALL TIMES**)

**I. Parties to Agreement:**

Indicate full name and address of Buyer and Seller. Include name of individual person or persons involved. Buyer’s and Seller’s signatures are fundamental.

**II. Date of Contract:**

(a) Give date the initial agreement was reached

(b) Give Contract Number.

**III. Description of Material:**

Use NF code names or clearly describe what is being traded. Any allowable quality variation to be so stated. Ex: “X percent moisture allowed” or “Minimum CU content to be X percent” or “X percent painted material allowed.”

**IV. Quantity:**

State exact quantity expected and indicate allowable tolerances or minimum/maximum limitations. Ex. “40,000 lbs. (5% More/Less allowed)” or “38,000 to 42,000 lbs.”

**V. Packing:**

State type of packing allowable and restrictions if such are required. Ex: “Bales not to exceed 60 inches”; “Bales not to exceed 3,500 lbs.”

**VI. Delivery:**

Show complete address of shipping or delivery point, including where applicable, specific rail siding or junction, forwarding warehouse, and party to be notified. Ex: “FOB (Actual Point of Shipment) Chicago, Ill.”; “FOB (Actual Point of Delivery) St. Louis, Mo.”; “FAS Baltimore Container Yard”; “C&F Tokyo, Japan.” If these details cannot be furnished at the time of writing of contract, it should state “shipping/delivery instructions to follow.” State means of conveyance to be employed. State size and type of truck, rail car, container or number of shipments expected or permitted.

**VII. Shipment:**

Time allowed for shipment or delivery should be clearly stated. Ex: “Shipment by Jan. 15, 2008 LATEST”; or “Delivery by Jan. 15, 2008.” Indicate at whose option, Buyer’s or Seller’s, shipment shall be made in time period stated.

**VIII. Price:**

State price per unit. Ex: “$20.00/CWT”; “20.00 Cents/Pound”; “$400.00/Net Ton”; “$440.92/Metric Ton.” and indicate where appropriate “Clean and Dry”; “Full Copper Content.” If applicable, state exact processing, smelting, refining charge, or unit deductions for impurities. (Avoid the use of the word “penalties.”)
IX. Payment:
Terms of payment should be explicit. Ex: "Net 30 days after shipment"; "Net 15 days after mill receipt." Avoid phrases such as "usual," "Net 30," "Net Cash." Documents required to effect payment to be clearly stated. Ex: "Bill of Lading"; "Invoice"; "Weight Certificate." State how payment shall be made. If there is discussion of compensation for delayed payments, it should be included in the contract. If Letter of Credit is called for as a means of payment, it is advisable that the terms to be included in the Letter of Credit also be stated in the contract. When applicable, contract should state whether Buyer or Seller is responsible for payment of taxes, duties, or any other levies to which a shipment could be subjected. Contract should state whether the Seller's or Buyer's weights shall govern the basis of settlement.

X. Assignment:
The contract may state whether the Buyer and/or the Seller has the right to assign the contract. If it does, it should emphasize that the obligation arising under the contract shall be equally binding on his assignee.

XI. Notice:
The Seller should specify how notice to be given under the contract should be received—i.e. by hand, by telegram, by certified or registered mail. One should also specify when notice is deemed to be received by the party to whom it is given.

XII. Disclaimer of Warranties:
Depending on the type of transaction, or the metal involved, the Seller may want to limit his liability by disclaiming any warranties of merchantability or of fitness for a particular purpose.

XIII. Default:
The contract should contain a provision setting forth the events which would result in a default of the contract. This provision might also contain a clause stipulating damages and/or setting forth available remedies (i.e. specific performance) in the event a default does, in fact, occur.

XIV. Force Majeure:
This item is related to the item of default, as indicated in paragraph XIII. Seller or Buyer may enumerate, either generally or specifically, what events (i.e. strikes, fires, accidents) constitute circumstances beyond its control and thereby absolve him/her of any liability for damages or delay.

XV. Non-Waiver:
The Seller or Buyer should state in the contract that his/her failure to insist upon strict performance in any given instance shall not be construed as a waiver or relinquishment for the future of any of the terms, covenants and conditions contained therein.

XVI. Claims:
The Seller may specify that any claims involved in a metals transaction for contaminated materials, weight shortage, or for any other cause is waived by the Buyer unless brought to the Seller's attention within a certain number of days after delivery.

XVII. Arbitration and Applicable Law:
The contract should set forth which state's or country's law will apply in the event of a legal dispute under the contract. It should also provide for arbitration procedure. (If ISRI Arbitration is desired, the contract should so stipulate.)

XVIII. Benefit:
The contract should stipulate on whom it is binding. For instance, the Seller or Buyer may want to specify that the contract inures to the benefit of the parties, their legal representatives, successors and assignees.

XIX. Entire Agreement:
A clause may be included in the contract stating that the contract constitutes the parties' entire agreement and supersedes all prior agreements and understandings with respect to the subject matter of the contract.

XX. Modification:
A clause may be included in the contract stating that the contract's requirements can only be modified by a written instrument signed by the parties or their respective agents. This insures that the parties' informal discussions will not later be construed as affecting an alteration of the contract.

Part II: Packing, Weighing, Shipping and Receiving
It is recommended that strict adherence to contract terms will minimize many of the potential problems in this area. If there is a question about any item, one should communicate with his/her Buyer/Seller and clarify the situation prior to shipping. Listed below are some specific guidelines to be used in avoiding the most frequently reported problems.

Packing (All Shipments)
Seller's Responsibility:
- Pack in the manner and form agreed. Example: In sound bales, briquettes, boxes, pallets, drums, loose, etc.
- Be sure that Buyer agrees with your definition of words and phrases, i.e. Bales, Briquette, Coil, etc. as well as allowed dimensions and weights of such.
- Material and packages should be securely tied or supported so that packages will hold in transit and normal handling.

Buyer's Responsibility:
- Advise Seller of any specific prohibitions, i.e. type or method of packing, size or weight of pieces, units or packages, etc.
- Be sure that Seller agrees with your definition of words and phrases, i.e. Bale, Briquette, Coil, etc., as well as allowed dimensions and weights of such.

Weighing, Shipping and Receiving (Truck Shipment)
Seller's Responsibility:
- Each package should be individually weighed and the entire truckload should be checkweighted for comparison. Reconcile or explain any differences. If truck is
weighed during inclement weather or wind, make note of this on weight ticket.

b. Trailers should be drop-weighed (both empty and loaded).

c. All equipment should be inspected before loading, and cleaned or repaired where necessary to avoid loss or spillage.

d. Open top trucks or trailers should be tarped or covered.

e. Vans and closed trailers should be sealed and seal numbers indicated on all documents.

f. If your customer requires appointments, make one in advance. Otherwise, as a courtesy, advise the Buyer of your anticipated delivery schedules.

g. A complete manifest and packing list should accompany each shipment. This should clearly indicate the order number, items shipped, number and type of packages of each commodity, as well as the gross, tare and net weights of each package. This detailed information should be put into an envelope and attached to the inside wall of the truck or van. If this cannot be done, give a complete set of papers to the driver to deliver with the original Bill of Lading covering the shipment. At the very least, notify Buyer by telephone, telex or wire of these details on the day shipment leaves.

h. Different lots should always be properly segregated and bulkheaded to avoid comingling. Each package should be tagged or marked to aid in proper identification and segregation at the receiving point.

i. Be aware that someone at the delivery point will have to unload the shipment. Pay particular attention to door areas to assure that material is loaded safely. Proper care should be taken to insure that the material can be unloaded in a safe and expedient manner.

Buyer's Responsibility:

a. If Seller requires appointment prior to pickup, make one in advance. Otherwise, as a courtesy, advise the Seller of your anticipated pickup schedule.

b. Trailers should be drop-weighed (both empty and loaded).

c. Carefully check shipment advices and compare package count, seal numbers, weights.

d. Prior to unloading, if a significant* weight difference is apparent, the Seller should be notified promptly and, if requested, another weight should be taken to determine if spillage or theft might have occurred.

e. After unloading, promptly advise Seller of any significant* differences between advised and actual weights, segregation, classification or quality. (Note: Refer to Part IV of the circular for recommended procedures in handling quality problems.)

f. Truck or trailer should be completely unloaded including any spilled material which should be picked up, weighed and identified as spilled from original containers. Buyers should cooperate in every way to help minimize losses.

Weighing, Shipping and Receiving (Rail Shipment)

Seller's Responsibility:

a. Each package should be individually weighed and the entire rail car should be check-weighted for comparison. Reconcile or explain any differences. If rail car is weighed during inclement weather or wind, make note of this on weight ticket.

b. Railroad cars should be uncoupled and at rest (if possible) before weighing.

c. All equipment should be inspected before loading, and cleaned or repaired where necessary to avoid loss or spillage.

d. Railroad cars should be sealed and seal numbers indicated on all documents.

e. A complete manifest and packing list should accompany each shipment. This should clearly indicate the order number, items shipped, number and type of packages of each commodity, as well as the gross, tare and net weights of each package. This detailed information should be put into an envelope and attached to the inside wall of the railroad car. If this cannot be done, mail a complete set of papers to the Buyer on the day shipment leaves.

f. Different lots should always be properly segregated and bulkheaded to avoid comingling. Each package should be tagged or marked to aid in proper identification and segregation at the receiving point.

Buyer's Responsibility:

a. Railroad cars should be uncoupled and at rest (if possible) before weighing.

b. Carefully check shipment advices and compare package count, seal numbers, weights.

Prior to unloading, if a significant* weight difference is apparent, the Seller should be notified promptly and, if requested, another weight should be taken to determine if spillage or theft might have occurred.

d. After unloading, promptly advise Seller of any significant* differences between advised and actual weights, segregation, classification or quality. (Note: Refer to Part IV of the circular for recommended procedures in handling quality problems.)

e. Rail car should be completely unloaded including any spilled material which should be picked up, weighed and identified as spilled from original containers. Buyer should cooperate in every way to help minimize losses.

Weighing, Shipping and Receiving (Export/Import Shipment)

Seller's Responsibility:

a. Each package should be individually weighed and the entire container load should be check-weighed for comparison. If container is weighed during inclement weather or wind, make note of this on weight ticket.
b. Container and chassis should be drop-weighed, if possible, both empty and loaded.

c. Prepare and send to Buyer a complete manifest and packing list indicating the order number, items shipped, number and type of packages of each commodity, as well as the gross, tare and net weights of each package and the seal numbers.

d. If shipment is against a Letter of Credit, pay strict attention to all terms.

e. Place seals on all container doors and indicate seal numbers on documentation.

f. Material and packages should be properly stowed and braced to prevent movement during shipment.

g. Be aware that someone at the delivery point will have to unload the shipment. Pay particular attention to door areas to assure that material is loaded safely. Proper care should be taken to insure that the material can be unloaded in a safe and expedient manner.

Buyer’s Responsibility:

a. Container and chassis should be drop-weighed, if possible, both empty and loaded.

b. Carefully check shipment advices and compare package count, seal numbers, weights.

c. Prior to unloading, if a significant* weight difference is apparent, the Seller should be notified promptly and, if requested, another weight should be taken to determine if spillage or theft might have occurred. Seller should be given opportunity to appoint surveyor or representative to verify weights.

d. After unloading, promptly advise Seller of any significant* differences between advised and actual weights, segregation, classification or quality. (Note: Refer to Part IV of the circular for recommended procedures in handling quality problems.)

e. Container should be completely unloaded including any spilled material which should be picked up, weighed and identified as spilled from original containers. Buyer should cooperate in every way to help minimize losses.

*For purposes of this section, the meaning of the word “significant” shall be determined by agreement between Buyer and Seller, depending on the commodities and their values.

Part III: Transportation Guide

The mode and type of conveyance should be specified in the contract. If it has not been, then it is important that Buyer and Seller agree upon the mode and type to be used. These guidelines will assist in determining the appropriate means of transportation to employ.

A. Mode—Truck/Trailer

1. Type:
   a. Dump
   b. Removable sides
   c. Van—open or closed
   d. Dimensions of unit (20 ft., 40 ft., etc.)
   e. Determine if truck/trailer capacity meets minimum weight specified on contract.

B. Mode—Rail Car

1. Type:
   a. Box car or gondola
   b. Size of door opening, i.e. single or double door
   c. Special type D.F., Hi-Cube, etc.
   d. Dimensions of car (40 ft., 50 ft., 60 ft., etc.)
   e. Determine if rail car capacity meets minimum weight specified on contract.

C. Export Shipments

1. Container:
   a. Type of container, i.e. closed, open-top, flat rack, Hi-cube, etc.
   b. Size of container (20 ft., 35 ft., 40 ft., 45 ft., etc.)
   c. Determine if container capacity meets minimum weight specified on contract.

2. Breakbulk

Part IV: Rejections—Downgrades—Claims

A brief explanation of these items will help one understand and implement the procedures recommended in this section.

Rejections: Rejections can occur when a Buyer refuses to accept a shipment of material that does not conform to the description specified in the contract. Usually in such cases, the Buyer cannot utilize the material and the Seller is asked to remove the material from the Buyer’s place of delivery. A rejection can occur prior to unloading, but often the cause of the problem cannot be determined until the material has been off loaded and graded. Any part, or all, of the shipment may be subject to rejection.

Downgrades: Downgrades can occur when all, or part, of the material in a shipment is not in conformity with the description specified in the contract. Often, in such cases, the Buyer can utilize the material and is willing to accept delivery of the material, subject to a price commensurate with its value.

Claims: This term is used mostly in export-import movements, and is used generically to encompass both rejections and downgrades, as well as weight shortages.

Strict adherence to contract terms can minimize the common causes of these difficulties. However, if a problem arises, it should be given prompt attention and settlement should be attempted as quickly as is practical. It is essential that both parties cooperate and keep communications open to minimize expenses and to preserve the relationship. Negotiations should not be conflicting but mutually beneficial and fair. Listed below are some recommended steps to be taken when a problem arises.

Domestic Shipments

Buyer’s Responsibilities:

a. In the event of a rejection Buyer must notify Seller immediately by telephone or telex. If Seller fails to
respond within two business days, Buyer may return material in most prudent manner. Subject to contract provisions, Buyer should promptly advise Seller concerning replacement of rejected material.

b. In the event of a downgrade Buyer must notify Seller immediately by telephone or telex and afford Seller an opportunity to inspect the material prior to its use. If material is to be inspected by Seller or his/her representative, Buyer should agree to a mutually convenient time to do so.

c. Buyer must give Seller option of removing material if he/she does not agree to downgrade. (All costs of unloading and reloading are for Seller’s account.)

**Seller’s Responsibilities:**

a. In the event of a rejection Seller should respond promptly and advise Buyer of his/her intentions. Seller must reply within two business days. Subject to contract provisions, he/she must advise Buyer promptly concerning replacement of rejected material.

b. In the event of an unacceptable downgrade Seller must advise Buyer within two business days if he/she wishes to inspect material and agree upon a mutually convenient time to do so.

c. If Seller wishes to remove downgraded material from Buyer’s delivery point, he/she must advise Buyer promptly. (All costs of unloading and reloading are for Seller’s account.)

**Export-Import Shipments**

**Buyer’s Responsibility:**

a. In the event of a claim, time is of the essence and notification should be given to Seller within a reasonable period of time after arrival of vessel in receiving port.

b. In the event of a claim, the material should be held intact until agreement has been reached. The acceptable portion of the material may be consumed and/or arrangements may be made to sample a portion of material, i.e., 10-25% with balance held intact pending resolution of claim.

**Seller’s Responsibility:**

a. In the event of a claim, Seller should respond to Buyer’s notification promptly by telephone, telex, wire, or cable.

b. When a claim settlement has been agreed upon, terms of settlement must be followed promptly.
Guidelines for Inbound Curbside Recyclables for Material Recovery Facilities - Minimum Recommended Materials List

**NOTE:** The information provided by ISRI is for general guidance only and not for legal purposes. Anyone utilizing these Specifications or the Additional Materials which may be added to Curbside residential single stream and dual stream programs (below) is advised to consult with their legal counsel on all matters with respect to any particular situation involving contracts and agreements implied or written, or any other potentially litigious situations. The application and impact of laws can vary widely based on the specific locality and facts involved, and this document is not meant to be inclusive of all situations.

Materials accepted may be modified by mutual agreement between local governments, homeowner associations, and recyclables collectors (“buyer” of MRF separating, cleaning and marketing services) and Material Recovery Facilities (“Provider” of MRF services). For local purposes, parties to a local Residential recycling transaction may specify particular variations, additions or deletions, as are suited for their specific programs and for their individual convenience. Whatever is decided should be mutually agreed to and so stipulated in writing.

- The parties should use their own due diligence to insure that materials collected in Curbside Residential Single Stream or Dual Stream programs, and sold from MRFs after processing, consist of properly packaged materials suitable for recycling. Failure to maintain quality in residential recycling, and lack of diligence, are the chief reasons for problems arising from such programs.

- Arbitrary deductions, valuations, cancellations and/or rejections in MRF transactions are counter to acceptable good trade practices.

- Buyers will supply the agreed-upon quality of Curbside residential single stream or dual stream material into a MRF and shall not be responsible for the use of that material thereafter when sold for recycling if material is accepted by the seller of MRF services, unless such materials contain hazardous waste.

### Paper/Acceptable Fiber (Acceptable)

- All full-sheet office paper, white paper
- Colored paper
- Newspaper (plastic bags and strings removed)
- Magazines (all types), catalogs (all types)
- Phonebooks (all types)
- Junk mail
- Paperboard
- Tissue boxes and tissue/towel rolls
- Paper office folders
- Paper towel and toilet paper rolls

### Paper (not preferred or may be prohibited) with examples (not inclusive)

- Shredded Paper
- Napkins
- Tissue paper
- Wall paper
- Paper towels
- Wax paper
- Wrapping paper
- Clean, dry double-polycoat food packages
- Any paper which has the potential to be contaminated with bodily fluid

### Cardboard (OCC) Acceptable

- Paper Boxes- Packing boxes, corrugated liners, boxboard (i.e. shoeboxes, gift boxes, cereal boxes),
- Brown or Kraft paper bags, brown wrapping paper, corrugated packing material.

### Cardboard (not preferred or may be prohibited) with examples (not inclusive)

- Cardboard lined with plastic (i.e. bubble wrap boxes)
- Waxed/waterproof cardboard.
- Boxes containing food (i.e. contaminated boxes containing pizza, excessive oil, or cheese), excessive liquids, or other materials. Acceptable delivery boxes shall not contain any of these.
## Inbound Curbside Recyclables for MRFs

### Cartons
- Food and Beverage Cartons—such as milk, juice, aseptics and broth (must be empty, clean and dry)

### Non Acceptable (Some Examples)
- Containers with moisture, other materials, or food residue still present, straws, etc.

### Plastics Acceptable
- Plastics #1, #2, and #5 Bottles, jugs, jars, and containers; i.e. soda bottles, laundry detergent jugs, water bottles, milk jugs, and other household containers consisting of polyethylene terephthalate, high density polyethylene, and polypropylene
- Rigid Plastics—clean polyethylene plastics—toys, storage containers, file boxes, etc. (must be free of any other material)

### Plastics (not preferred or may be prohibited) with examples
- Film and film bags not specified in design of the recycling program.
- Shopping, Grocery, Retail bags and small Plastic “Baggies”.
- Plastic tableware—(#3, #4, #6, & #7 plastics, and in many cases #1, #2, and #5 plastics).
- Expanded polystyrene containers (EPS).
- Compound or layered multi-resin plastic receptacles.

### Metals Acceptable
- Aluminum and tin beverage and product containers (Food, beverage, and other containers’ materials must be completely empty of contents clean and dry)

### Metals (not preferred or prohibited) with examples
- Metal containers with paper or plastic attached.
- Paint cans.
- Aerosol cans with liquids, propellants or pressure still in the can are prohibited.
- Metal containers with hazardous materials still in them are prohibited.

### Glass Acceptable
- Bottles and Jars only (materials must be dry and clean) with minimum breakage

### Glass (not preferred or prohibited) with examples
- All glass types not listed in the “Glass Acceptable Section”, (window pane glass, leaded crystal, borosilicate glass, clear ceramic products, etc.).

### PROHIBITIVES: Unacceptable in any quantity. Subject to Immediate Rejection due to Health, Safety or Product Suitability Concerns:
- E-waste and Electronics—such as Cell phones, IPad, IPods, any Computers, TV’s, wires, Controllers, Printers, Printer rolls, and other materials
- Radioactive Materials of any kind.
- Hazardous Materials—such as Oil, Paint, Antifreezes, Powders, free or attached Asbestos or Asbestos-containing products, and Fertilizers.
- Corrosives—such as Batteries, containers with Acid or Base Residue.
- Compressed Gas Cylinders and other containers holding or formerly containing Flammable, Pressurized or Combustible Materials such as fire extinguishers, Process vessels, bulk Storage Tanks, (see restrictions on aerosol containers above).
- Lead and other Heavy Metals.
- Other Hazardous Wastes—such as Pesticides, Poisons, used Oil filters, Mercury-containing materials such as Switches and Thermometers, Biohazards, Fluorescents Lights, Tube toss.
- Refrigerants—such as Freon/Puron/Substitutes, Compressors, Air Conditioners, Refrigerators, Freezers.
- PCBs—such as Capacitors, Transformers, Ballast.
Inbound Curbside Recyclables for MRFs

- Explosives – such as Firearms, Ammunition, Shells, Fireworks, used Gasoline Cans.
- Medical Waste – such as Needles, Syringes, Biohazard-labeled Containers, etc.
- Biological waste of any kind- such as Animal carcasses, Infestations, Skins, Leather, Bones, Organs.
- Other Hazardous Materials which may harm human health or cause property/workplace damage.
- Any Materials containing human liquids or wastes- such as Diapers, Tissue, etc.
- Inert construction materials- such as Rock, Dirt, Asphalts, Concrete, Debris, Roofing, Dry Wall, etc.
- Gross contaminants which reduce product value significantly or completely.
- Bulk and Gross Materials Not Recyclable through a MRF: such as Tires, Fiberglass, Wood, Asbestos, Appliances, Furniture, Ceramics, Rags, Air Bags, common Light Bulbs, Crystal, Plate & Mirror Glass, other Solid Wastes.
- Free Flowing Liquids of any kind.

Additional Materials
The goals of municipalities for establishing and maintaining curbside programs vary throughout the country. For various reasons such as mandates, policies, plant capabilities, customs, local markets (i.e. access to ocean export), and other factors, additional compatible materials may be collected in addition to the above materials for separation at material recovery facilities. The following chart offers ISRI’s current guidance, which shall be updated from time to time as markets and conditions change, on the current pros and cons for each material for the majority of curbside programs in the U.S. ISRI reserves the right to change any opinion below as it receives feedback from its members and others in the industry. The opinions expressed do not necessarily apply to all circumstances and programs, but are guidelines in today’s market. Notwithstanding the below, to be acceptable to material recovery facilities, all such materials, if accepted in a mixed recyclable curbside recycling program, should be subject to the same standards as the ISRI Inbound curbside material “Standards” above, in terms of Source-separation, Handling, Moisture, Health Size Suitability, Material Market Suitability, and Quality. A material is not recyclable unless there is a secondary non-landfill use or market for its consumption. Use of ISRI Scrap Circular specifications is recommended as a guide.

<table>
<thead>
<tr>
<th>Material</th>
<th>Pros</th>
<th>Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1 - #7 mixed plastics</td>
<td>- Markets do form regionally, locally, or export for mixed plastic bales.</td>
<td>- Only stable domestics markets are for #1, #2, and #5 plastics.</td>
</tr>
<tr>
<td></td>
<td>- Markets also fluctuate and can disappear with oil/resin prices changes.</td>
<td>- #1 - #7 mixed plastic bales are sometimes not marketable from some locations.</td>
</tr>
<tr>
<td></td>
<td>- Allows curbside programs to be permissive.</td>
<td>- Generally, bales are made from all plastic materials entering the MRF, not just bottles (i.e., plastic tableware, straws, etc.) which may make them more difficult to sort for re-use.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Must assure brokered #1- #7 mixed bales, especially exports, do not go through secondary processing utilizing child or unfair labor</td>
</tr>
<tr>
<td>#3 - #7 Plastics</td>
<td>Markets do form regionally, locally, or export for mixed plastic bales. Allows curbside programs to be permissive.</td>
<td>Most volatile material baled in a MRF. While this grade is often sold as bales for secondary processing, usual materials recovered are #1, #2, and #5 plastics not recovered at the MRF. Some polystyrene resins are also being recovered. #3-#7 mixed plastic bales are not often marketable in down markets. Generally, bales are made from all plastic materials entering the MRF, not just bottles (i.e., plastic tableware, straws, etc.) which may make them more difficult to sort for re-use, especially after baling. Sellers must assure brokered #3-#7 mixed bales, especially exports, do not go through secondary processing utilizing child or unfair labor practices or causes any environmental damage (i.e. open burning of residuals). Yield from these bales may be very limited after all costs of sorting and shipping are applied. Generally, bales are made after the separation of #1, #2, and #5 bottles from all plastic materials entering the MRF, not just remaining bottles (i.e., plastic tableware, straws, etc.) which may make them more difficult to sort for re-use.</td>
</tr>
<tr>
<td>#6 Polystyrene and Expanded Polystyrene (PS)</td>
<td>Some states and local govt.’s target this material. New extruding technologies and processes, like air-classification to optical sorter, to PS extruder may offer better recovery than in the past at MRFs.</td>
<td>Outside of rare pilot program instances, markets are scarce to non-existent for MRF-derived #6. The lightweight properties of EPS take long period of storage time to get to truckload quantities. Test programs have high degree of failure so far.</td>
</tr>
</tbody>
</table>
| Flexible Packaging | • Material over 1% of inbound flow at some MRFs.  
• May be recovered for energy value as a pellet.  
• May be recovered in bag-in-bag programs.  
• New technologies and processes are emerging for both sorting and emulsifying to separate polymers.  
• Not acceptable as a recyclable grade because of laminate properties and bounded chemistry of different layers presently. Only use is conversion.  
• Contaminates paper.  
• High food waste content.  
• Do not include in programs without tackling these issues. |
| Mixed household film (bagged in bag) | • A number of programs throughout the U.S. have added this commodity where residents stuff a plastic bag with household film ("bag in bag")  
• Can be used as pelletized or RDF fuel  
• Markets can be negative or prohibitive to non-existent with oil/resin fluctuations.  
• In most cases, cannot be exported.  
• Contamination can often be high.  
• Do not include in programs without tackling these issues. |
| Mixed household film in mixed recyclables ('pick-line film') | • Required by some programs and contracts  
• Can be used as pelletized or RDF fuel  
• Bags can store recyclables in some collection programs, i.e. New York City  
• Markets are marginal at best and can be non-existent for long periods.  
• Take back programs at grocery stores allow full recycling.  
• In most cases, cannot be exported.  
• Contamination is inherently high.  
• Residents often put good recyclables in bags causing belt to stop or loss of recyclables to occur.  
• Causes major screen wrapping, downtime and maintenance in material recovery centers. Contaminates paper.  
• Do not include in programs without tackling these issues. |
| Thermoform food or bakery containers (delicatessen, fresh food) clear-i.e. ‘clamshells’ | • Some markets limit the amount of #1, #2, and #5 thermoforms allowed. Check with local markets for limits or restrictions.  
• Some programs may not take them or be able to market them with PET bottles  
• Optical sorters cannot distinguish thermoform from bottle PET, HDPE, and PP, making QC difficult.  
• Downgrades for premium plastics occur in some markets  
• Some thermoform polystyrene containers cannot be distinguished |

<tr>
<td><strong>Aluminum Foil</strong></td>
<td>• Is acceptable in some export bales and very limited quantities in UBC. • Some programs on MRF residual recover Al foil</td>
<td>• Hard to generate in a clean form from residential sources. • Many restrictive export countries will not take foil which has been used with food and could reject bales. • Foil disintegrates and flakes with age. If in small pieces, foil flashes in an aluminum furnace. • Foil can contain high moisture food/household oil waste, which can explode when introduced into a furnace. • Domestic markets can be less tolerant than export. Before accepting check with market.</td>
</tr>
<tr>
<td><strong>Shredded Paper &lt;1” diameter loose</strong></td>
<td>• Is acceptable in some of curbside programs • Can be captured with some later technology MRFs through light fraction separation and optical sorting. • May be acceptable in Kraft bags in some mixed paper producing MRFs.</td>
<td>Does not get captured because of size recognition limitations at some MRFs and leaves MRFs as residue or in fines products like glass. Holds moisture and raises content of moisture in paper bales and in glass. Size of fiber strands makes it less recyclable.</td>

ISRI Arbitration Service

ISRI established an arbitration service as a means to enable members to use arbitration to resolve disputes.

ISRI arbitration is a voluntary procedure and must be agreed upon by both parties in the dispute. It is not required that both parties to the dispute be ISRI members.

The complete procedure for arbitration is set forth in ISRI’s “Rules for Arbitration,” which are available from Association headquarters in Washington, D.C. The rules contain the necessary form that must be completed to initiate arbitration. ISRI treats all filings, awards, and proceedings as confidential.

The rules are highlighted below:

1. Anyone may propose arbitration in a dispute, though at least one party must be a member of the association. Both parties must agree to the arbitration by signing a “Submission to Arbitrate” form and agreeing to abide by the applicable Arbitration Rules.

2. A panel of arbitrators has been established by the association. The arbitrators serve without compensation, except for reasonable expenses. The arbitration parties must draw their arbitrators from the panel. A maximum of three arbitrators can be issued in any proceeding; the parties are encouraged to use a single arbitrator.

3. There is a specific schedule of fees listed in the “Rules for Arbitration.” Each party must deposit with the association in advance $500 plus $500 for each arbitrator. The total deposit for each party thus is either $1,000 or $2,000, depending on whether one arbitrator is to be used or three. A portion of the fee is refundable if not required to defray arbitrators’ costs. The arbitrators may require the losing party to reimburse the prevailing party for its share of these costs.

4. The arbitration procedure usually includes a hearing, at which time the parties involved are required to appear, present their respective cases, and be available for questioning by the arbitrator(s). All physical evidence (contracts, correspondence, relevant comments, etc.) may be required to be submitted in advance to the arbitrators. A party in the arbitration may be accompanied by counsel but must inform the other party in advance and receive permission from the arbitrators. Witnesses may also be called to an arbitration hearing. There is also an optional procedure for conducting the arbitration without an oral hearing.

5. An award by the arbitrator(s) will be made promptly, within 20 days after hearings have been completed or final briefs submitted. The award is made in writing.

6. The rules state that the parties to the dispute shall be deemed to have consented that a judgment upon the award be entered in any court having jurisdiction over an action to enforce the award.

Members who wish to provide an automatic basis for the settlement of any disputes arising from a transaction are encouraged to provide in their contracts that the ISRI Arbitration Procedure shall prevail in the event of any ensuing controversy and that each party will take all necessary steps to initiate such arbitration. Members are urged to obtain and carefully read the “Rules for Arbitration” before proceeding.
