

Can't lockout your mobile equipment?

Here's one solution:

This isolation device can be installed on the battery power cable of most mobile equipment. It allows for isolation of the circuit and the application of a padlock to securely control the electrical energy of that unit.

Remember: There may be other sources of energy that must be controlled before servicing the equipment such as:

- ✓ Gravity
- ✓ Hydraulic
- ✓ Air
- ✓ Any other source of energy listed in your lockout procedure
