Good driving skills apply to all types of equipment!

Driving equipment in the yard requires the same caution and attention to surroundings as driving down the highway.

> pay attention
> do not operate equipment you are not trained and qualified to operate
> always wear your seatbelt
> inspect your equipment before use
> keep eye contact with pedestrians
> avoid speeding
> carry the load close to the ground
> if the view is blocked - slowly drive backwards
> do not operate equipment with poor brakes or missing safety devices
> report all accidents to your supervisor

Safe driving is everyone’s responsibility!
