The following services are available for free to ISRI members at your facility by a member of the ISRI Safety Staff.

**ISRI Blueprint/Safety Culture Assessment**

The ISRI Blueprint process facilitates a discussion among senior managers that allows them to identify the strengths and weaknesses of 20 components of the facility’s safety culture. The Blueprint process involves a scoring system which provides the facility management with a definite metric for each element. The blueprint and the element scores are left at each facility so that the member can do a self-review every year and track safety program improvements.

**ISRI Safety General Safety Class**

The General Safety Class is a one day class which replaces ISRI’s former 10-Hour Safety Training Class and is provided at the ISRI member’s facility.

The class addresses the basic concepts of safety while focusing on hazard recognition. The class provides general information on OSHA information, mobile safety, fire prevention and housekeeping, energy isolation (Lockout/Tagout), Hazard Communication, the different types of personal protective equipment (PPE) and machine guarding.

The General Safety class is not intended to replace site or company specific training on the recognition and control of hazards in the workplace but to provide supplemental information.

**Transportation Safety Assessment**

ISRI offers a transportation safety assessment, which focuses on six key components: general responsibilities, driver responsibilities, operational responsibilities, vehicle responsibilities, hazardous material responsibilities (if applicable), and crash responsibilities. As part of the assessment the following processes will be reviewed: driver qualification; hours-of-service; vehicle maintenance; drug and alcohol testing; and hazardous material if applicable. The company’s CSA performance will also be reviewed to identify any at-risk or safe CSA BASICS. Upon completing the assessment feedback and recommendations will be provided to management.

**Defensive Driver Class**

ISRI offers a commercial defensive driver class (conducted in a classroom environment) which focuses on the following: how CSA impacts a driver and a company, cost of accidents and how they impact a company’s bottom line, driver etiquette recommended for state/federal roadside inspections, hours-of-service requirements, and driver distractions (cell phone requirements for drivers who operate CMV’s).

**Hands-on Vehicle Inspection Class**

This class focuses on the following: how to perform a thorough vehicle inspection, vehicle nomenclature, leading vehicle trend defects (lights, tires, brakes, etc.), and CVSA out-of-service criteria.

*If you are interested in any of the ISRI Safety Outreach Services contact Elly Torabian at (202) 662-8511 or at etorabian@isri.org.*
SAFETY OUTREACH SERVICES

SERVICES REQUIRING A FEE
The following services are available to ISRI members at your facility for a fee and provided by a member of the ISRI Safety Staff.

Powered Industrial Vehicle Train-the-Trainer
The powered industrial vehicle operator safety train-the-trainer class is designed to provide education and training to scrap recyclers across all commodities. The aim is to provide information in a 1-day classroom and hands-on setting that will create trainers in your organization who can then continue educating your employees on powered industrial vehicle safety. This course will cover forklifts, skidsteers, and wheel loaders, or any combination of these three that you may have at your facility.

Material Handler Train-the-Trainer
The Material Handler Train-the-Trainer includes one full day in the classroom covering equipment related safety information and 4 – 6 hours in the field going over equipment inspection, blind spot drills, machine set-up and control, as well as loading and unloading exercises. This course is designed to give trainers at your facility a better understanding of safety in and around material handlers.

The course is available to be taught in English by an ISRI Safety Outreach trainer. The materials are available in both English and Spanish. The ISRI Safety Outreach trainer is able to co-teach alongside with a translator you provide if necessary. The first part of the training will be held in a classroom environment and the second part of the training will be held at the operations facility around and on the mobile equipment. The cost is $1,500.00.
