

Seven Keys to City Driving

1. Understand the traffic waves – Prior knowledge of peak travel times and traffic patterns will save you time and fuel.
2. Be Predictable – Sudden movements cause accidents. Steady, predictable movements give other motorists a chance to react (turn signals).
3. Expect the unexpected – Expect delays, and getting cut off by other motorists.
4. Know the height of your truck – Select routes to eliminate the risk of bridge strikes.
5. Brake for pedestrians – 85% of pedestrian accidents occurs in cities.
6. Pre plan your route – Plan your route and stops at the time of dispatch.
7. Compensate your turns for busy narrow streets – Ensure your mirrors are properly adjusted, and exercise care when making turns.

Save Tomorrow. Act, Work, and Drive Safely Today!
